Good evening. I have a Coded Communications IQmodem mod 1702741-1 that I am seeking information on. I believe it was used to interface a mobile display to a RF link in a vehicle. I have been told that they have changed the company name or have been bought out by another company. Any info will be greatly appreciated. Thanks and 73's Don KB6GQA

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone | (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D. |

John Miller reports the current price is $5.70 for service | manuals. Motorola advised John that Alert Monitor parts | are scarce, with last stocked being in 1995, Knobs are no | longer available, though there are many that would fit. |

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

```
---------------------------
VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz
```

Table 4. Plectron SM Model Band Limits

```
Model UHF VHF-high VHF-low
---------------------------------
SM-301 X X X
SM-302 X X
```

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

4456. 756PRO Test Results From June QST

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-02 00:00:00 UTC
From: kk4tl@aol.com
Message-ID: <20000501232137.23698.00000474@ng-fu1.aol.com>
Source record: 80283

Just got this comparison from the Icom reflector. Compares some specs of the
756-PRO to the 775DSP. 92dB dynamic range in the 2 tone 3rd order IMD spec?
Is this ok for Y2K technology? Or is it a "nice try but no cigar" result?
==========
756PRO review June 2000 page 68 versus 775DSP review in January 1996
page 68.

Best Minimum discernible signal 500 Hz IF filtering:

Freq 756PRO 775DSP 775DSP better by

1.0 MHz -117dBm -131dBm 14dB
3.5 MHz -141dBm -143dBm 2dB
14 MHz -140dBm -143dBm 3dB
28 MHz -140dBm -145dBm 5dB

Blocking Dynamic range with 500 Hz IF filters Preamp off:

Freq 756PRO 775DSP 775DSP better by

3.5 MHz 127dB 139dB 12dB
14 MHz 127dB 137dB 10dB

Two Tone, third order IMD dynamic range with 500 Hz IF filters and
Preamp off:

Freq 756PRO 775DSP 775DSP better by

3.5 MHz 92dB 106dB 14dB
14 MHz 95dB 106dB 11dB

3.5 MHz +13.5dBm +20dBm 6.5dB
14 MHz +15.4dBm +21dBm 5.6dB
==========
Does anyone have the article from the test of the original 756? The same
comparison just might be interesting.

From: kk4tl@aol.com
Message-ID: <20000501232423.23698.00000475@ng-fu1.aol.com>
Source record: 80284

Reviewing the numbers, looks like a Kenwood R-5000 would smoke the 756PRO in some of the dynamic range specs. This is NOT good news. Well, it could cause prices to be adjusted accordingly.

4458. fs: Kantronics "KAM" all-mode TNC w/Accessories$100+

Source record: 80285

Hi Guys;
I have for sale a Kantronics KAM All-Mode tnc.
This Kantronics All-Mode TNC comes with a Wall Supply, cables and Manual in a Loose Leaf Binder everything in better than Excellent shape! The TNC S/N is 100 02250 and is Version 5.01. The Manuals include: Commands/Operations and Installation Manuals. I also have the HostMaster II Manuals BUT NO SOFTWARE. There is indication in the Loose Leaf Binder that the "Smart Watch" and 32K Static Ram chip was installed along with the version 5.01 update. The Six(6)Cables include: Din to Din, Mike to 9 pin DB, RS-232 to RS-232, (2)RS-232 to DB, 8 pin DIN to rca's. Whew! There is too much to check out here so I am offering it very reasonable. All I can say is that it was all dismantled from an estate. Real Nice Clean Stuff
If you wanna see a picture of it, try this URL>>
http://members.aol.com/nutzrus/kam.jpg
Price is $100 plus some help with shipping from 11758.
Thanks es 73.....RICH-WA2RQY RLUCCH2098@aol.com

4459. Re: IC 746 VS FT 920?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-02 00:00:00 UTC
From: tap@value.net
Message-ID: <390e5258.310286981@news.value.net>
Source record: 80286
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

It's kind of strange to hear people bash the 920's receiver.
I chose a 920 over a 746, *because* of the receiver, the ergonomics,
and the fact that I don't care for blue displays.
I'm sure some people will doubt the validity of ARRL reviews, and
certainly everyone has their biases, preferences, and some even have
amazing ears.
But looking at the two reviews side by side, while the 746 has a
slightly better noise floor, -143 vs. -138 at 14 mhz,
The 920's BDR and IMDDR are much better than the 746 at
129 and 97 respectively, vs. 113 and 92, at 14 mhz.
These kind of figures would seem to indicate a receiver that has
better strong signal handling capability. Not to mention the 920's
excellent dsp implementation, and noise blanker.

Just my opinion.

One possible problem is most icom mikes use a built in preamp. This would overdrive the average kenwood , as most kenwoods have this preamp circuit in the radio instead of the mike. Most any good mike will drive a kenwood, where as on many icoms you will need a preamp. An example, my normal mike is a audio technica undirectional dynamic. With my kenwood 830 I run the mike element straight to the radio. On my icom 730 I have to use a small preamp when using the same mike on that radio. The icom mike will work if wired correctly, but could overdrive. And disabling the preamp may get a bit tricky as I think they are using an electret condensor element in the icom mike. You can do it, but make sure the element can still get a bit of voltage. On an icom radio, this voltage is supplied though the mike hot line. About 8v I think. I think I'd just scrounge up a good dynamic for the kenwood... They are fairly cheap, and will make that kenwood sound good. I prefer my dynamic over the electret on my icom. Sounds better. MK

Well, they don't actually call it that anymore. You must be "certified
in the fcc database". To clear up any confusion on amps, I'll clip from
the fcc pt.97.

ï¿½ 97.315 Certification of external RF
power amplifiers.
(a) No more than 1 unit of 1 model of
an external RF power amplifier capable
of operation below 144 MHz may be constructed
or modified during any calendar
year by an amateur operator for
use at a station without a grant of certification.
No amplifier capable of operation
below 144 MHz may be constructed
or modified by a nonamateur
operator without a grant of certification
from the FCC.
(b) Any external RF power amplifier
or external RF power amplifier kit (see
ï¿½ 2.815 of the FCC Rules), manufactured,
imported or modified for use in a station
or attached at any station must be
certificated for use in the amateur
service in accordance with subpart J of
part 2 of the FCC Rules. This requirement
does not apply if one or more of
the following conditions are met:
(1) The amplifier is not capable of operation
on frequencies below 144 MHz.
For the purpose of this part, an amplifier
will be deemed to be incapable of
operation below 144 MHz if it is not capable
of being easily modified to increase
its amplification characteristics
below 120 MHz and either:

(i) The mean output power of the amplifier
decreases, as frequency decreases
from 144 MHz, to a point where
0 dB or less gain is exhibited at 120
MHz;

There is much more to read than that, but this covers the main portion pertaining to amps. BTW, my newsfeed was tango uniform for about 4 days, so if any other posts since wed., I can't see em. All a blank from wed. to today on all ng's. MK

What makes us believe what the test results indicate will be
our experience? From a sample of 1 unit?

Remember audiophiles that used to take their precious gear in
for testing to prove "flatness" - ala linearity over frequency
with bode plots?

Someday we'll wise up and insist our "dealers" provide a similar
service at hamfests, their stores, etc.

4478. What mic is used in Telex CM-1320 headset?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-03 00:00:00 UTC
From: ignacy@num.ads.uga.edu
Message-ID: <39102cac3vtanpl$mr2ice@news.uga.edu>
Source record: 80105

What microphone is used in the Telex CM-1320 headset? It shows infinite impedance, and barely drives my TS-850. Is it piezo or elecret? Is it good quality? Will a FET buffer work? The headphones sound really good.

Ignacy, NO9E

Even the FT-920 performed better then the 756Pro! Just compare the reviews
from QST.

Looking to upgrade to the Kenwood TS-570, would prefer 570D(G) but would consider either "S" model or the straight "D" model. Interested in the Voice keyer module and/or the SSB Filter but will consider rigs with these.

Please let me know what you have and what condition its in etc etc

Thanks
Brian

4484. How to adjust power output levels on Kenwood TM-G707A??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-03 00:00:00 UTC
From: John Rhodes <jrhodes.nospam@gj.net>
Message-ID: <flf0hs02ddnqbibas7n4v17r6l55s70b5j@4ax.com>
Source record: 80111

I will be using a Kenwood TM-G707A as a remote base radio and would like to adjust the 2 meter medium power output to about 35 watts. The default power levels will not do it. 10 watts is too low to access remote repeaters and 50 watts is too high for radio longevity. Can someone tell me how this can done? Hopefully just adjusting a certain pot inside the radio would do it but I don't know where that pot would be located. I don't have a service manual. Thanks for any help. If you respond by email, please remove the .nospam from the reply address.
John

4485. Re: IC 746 VS FT 920?

As a new HAM I considered both radios. There was just something about the audio of the 920 that sounded better to me. I too often hear from experienced operators their preference for the 746 with little underestanding.

How did I solve this dilemma? I bought an Elecraft K2!

Hi Guys,

This is an Icom 440Mhz 5 watt HT with a duplex 25 to 900 MHz (No gaps) scanner built in. It has two antennas, one for the HT and the other for scanner. It has the BP84 extended battery and the matching Icom LC-73 case. The case and the radio are brand new and *factory sealed*. Asking $200 + ship.

Praetorian,

I see this complaint all the time about eBay. There is a very simple solution to your gripe: Just look at items that are about to expire. If you don't like the bid price at that point pass, else make a bid and in a short time, maybe even minutes you'll know if you won. Actually a faster response time than contacting most NG sellers. Also, eBay has a better search facility.

73,

Casey

Try http://www.homingin.com
This is a good starting point for DF links. You should get the book
"Transmitter Hunting & Radio Direction Finding" too.

As far as Riley goes, your report will be like farting in the wind. The
FCC doesn't care about amateur radio anymore. If the FCC cared, they would
have had a different restructuring plan.

You can toggle it on or off, only; M is the cmd.

I added a pot to mine (brute force -- at the speaker) so I can adjust
the volume.

I haven't seen any change in the FCC enforcement actions since the restructuring was announced. I see no evidence that the FCC doesn't care about Amateur Radio. Quite the contrary; the amount of staff time they have invested into restructuring and enforcement has been considerable.

When you say cross band repeat, do you want the radio to be able to
function as a repeater, or be able to TX on VHF and RX on UHF or vice
verca? Personally I don't think there is an HT out there that will
last too long on it's battery as a cross band repeater or not over
heat before long.

If a split function is what your after look at the Alinco DJ-V5.

4506. Re: Yaesu FT-8100 Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-03 00:00:00 UTC
From: Max Imo <not@this.net>
Message-ID: <ex2Q4.7403$241.133478@news.corecomm.net>
Source record: 80133

The problem is the solder joints on the UHF potentiometer. If the radio is still in warranty, Yaesu will fix it as it is a known problem. If it is not in warranty you can fix the problem by getting to the guts of the front of the radio. You will find several broken solder joints where the pot joins the PC board. Resolder them and your radio should be OK.
LOL

Source record: 80052

***I have been using one for 10 years. As the previous sender states, it is built like a tank. Some observations:

* on CW it only uses 2000v thereby reducing it's output power to about 750 watts.

* on SSB it increases the voltage to 3000v and I can, key down, put out about 1200 watts to my TH-7. I have on several occasions, against Kenwood's warning notice, used the unit on CW in the SSB position especially in heavy pileups for a new country. I guess I have been lucky; no problems, however I am not recommending it and I do this very sparingly.

* On a few occasions I have tuned up the amp on a wrong band with no problem. The 3-500Z are workhorses and they are reasonably priced. Not cheap mind you, but not bad at about $350 apiece. The amp takes two tubes.

If you do intend to purchase the unit, try it out "first" on the air and look at it's output on a good (Bird) watt meter on all bands, CW and SSB. Also ask stations for audio reports with the Amplifier on. The last thing you want to do is purchase the unit and have to invest $600-750 for new tubes or other components.

* Regarding the switches, I have not experienced any problems although I have to admit the unit was not used heavily (e.g. switching from band to band over a long period of time.)

I rate it highly especially on SSB. I would like to see more output power on CW and perhaps there is a modification to do this.

P.S. I used the Amp first with the Kenwood TS-830 and presently the TS-940A. Perfect match and for both exciters I used the D-104 mike. High frequency response that matches or excells the Heil DX cartridge. (I have both and made some comparisons with overseas stations. The D-104 was given better reports. However, locally, stations may not like the high frequency response. But it sure cuts through the pileups.)

Serial numbers for the N2DAN Mercury's mean little. Steve left some gaps in the serial numbering and went back and filled them back in the early 80's. I don't know how many were given "older" s/n's back then but I know mine was one of them.

Basically there are 2 different Mercury vintages. Those made by Steve from scratch at his own shop in NY, the 75 or so "spares" kits made in FL and the ones that were sub contracted out when Steve's own machining ran out.

All of the laquered brass models are Steve's own personal handiwork from scratch including the machining of all the bases and most important to Steve the alignment and pressing of the bearings.

Some of the chrome bases were made by Steve for an RSGB convention. Later chrome models were from a FL machine shop that Steve assembled.

I am looking for a copy of the instruction sheets that
originally came with the Kenwood DRU-2 Digital Recording Unit, and the
VS-2 Voice Unit. If you have either one, please E-mail me & let me
know. I will gladly pay any copying and postage fees. If you have a
scanner, and could E-mail it to me, that would make it much easier.

Thanks,

4540. To ground or not to ground???

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-04 00:00:00 UTC
From: Stu <stu@ncweb.com>
Message-ID: <sh2bjheac3436@corp.supernews.com>
Source record: 80199

Greetings,

I heard some folks say it is a must to ground your equipment, (xmtr/PS etc) and some say do not bother. What is the best practice. Especially if the shack is on the second floor, (needing the shortest possible grounding wire). Use a long rod/strap attach all equipment to it. Then a grounding strap/wire to the grounding rod two stories down? Thanks in advance for all help. 73, Stuart KB8VIY

4541. Re: Yaesu FT-8100 Problem

From: frank4321@my-deja.com
Message-ID: <8erghkdop1@nnrp1.deja.com>
Source record: 80200

hello,
while talking about FT-8100 problems... A friend of mine has the
following problem: the 8100, while transmitting in the VHF band,
even with only 5 watts out, sometimes doesn't put out any power
and he can only see that by looking at the watt meter, since
anything on the radio display seems ok. Usually pressing and releasing
the ptt fix the problem for a while.
Any hint?
Thanks in advance.

>Why yes, I'm sure. After all look at how many commissioners are Hams,

Why would that have any meaning to the opinion of Ed?
Has there EVER been a commissioner that was a ham...even
in the often lauded "golden day of ham radio" from 1934 to the
pre-incentive licensing days?

>and immediately under them, how many of their assistance are Hams.

When Carl Stevenson met with the FCC to make our exparte
presentation on behalf of NoCode International, we met with
four people...three of them were hams themselves.

>Why
>there must be uhhh... lets see Ed, maybe you can give us the numbers,
>extras, novices, tech? calls?

What difference does it make?

Cheers,

Stu,

Grounding is definitely a must! However, some people say that the ground
wire run from the second floor to a grounding rod in the basement will
sometimes act as an antenna.
Keeping the ground short is always better.

I have a mint Ten-Tec Omni D Series A for sale. The rig has been used only as a back-up rig since original purchase. Digital frequency readout to the nearest 100Hz. 100W output 160 thru 10 meters, with full ALC control. WARC receive only on 30 meters. Excellent receiver with high dynamic range front end and Ten-Tec full QSK on CW. Includes optional noise blanker board installed, power cable, and a magnetic outboard circuit breaker for use with any 20 amp power supply or car battery. Also includes original owner's manual. Recent Ten-Tec service, including full alignment, PTO rebuild, and a complete update. An excellent DXing, contesting, or even first rig for the CW or fone operator. Still backed by the always excellent Ten-Tec customer service.

$300, plus shipping/insurance

All three for $400.00 plus shipping. Would prefer pick up in Michigan. First radio has 50 watts output PEP and drifts a little on transmit. Second radio has about 80 watts output PEP but band switch need cleaning or replaced. After switching it back and forth it a few times it works fine. It has a brand new additional SSB filter installed. The third radio will not turn on. Don't know if it's a bad switch or not. Bill w8wls. Please respond directly to w8wls@aol.com

Without disagreeing one bit, I'd add that compromises are sometimes needed and even work once in a while. I recall someone suggesting using RG-8 or an equivalent (with a fat center conductor) to avoid the antenna effect if your ground wire must be long. I've also heard of apartment dwellers who couldn't run an external wire using the ground pin on an electrical outlet. Never tried either, but an anti-static mat Uncle Sam bought came with a special one-prong plug to ground it. Finding the best solution to fit your circumstances may require some experimenting but, like going to the opposite coast, getting there in much of the fun.

4575. UHF ham repeaters for saleb - Portland Oregon, pickup only

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-04 00:00:00 UTC
From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <3911AF52.46108C84@yahoo.com>
Source record: 80234
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

My Hog needs some chrome. On to something
different. Have the following for sale as a package only, pickup
only, Portland Oregon USA;

Motorola UFH solid state MSY 15W repeater. With outboard 60W amp.
With MSY indoor cabinet, controller/squelch/audio/pl cards, with
sinclair flatpack
BpBr duplexer. 461/466 now. Easy retune to GMRS or UHF ham band.
With Motorola service manual too.

Also

GE UHF Mastr Pro repeater. In 8 foot GE coffin cabinet. With extra
tx and rx strips, power supply chassis, GE controller, home brew cw
id'er, remote on/off DTMF control, extra GE test set,
and GE brand TX/RX UHF 300W UFH duplexer tuned to my frequency and
ready to go. On the ham bands now and operational.
You even get to take over my frequency pair -- xtals included so
this is plug-n-play. Includes a Diamond GP-6 antenna too -- you just
supply feedline. With GE service books and spare TX tubes.

Also

Several GE VHF Mastr Pro strips including fresh tubes, etc. Enough
stuff to
make two...possibly three MORE repeaters.

Also

RCA UHF repeater. Unknown condition or model, but appears complete.

I need $600 FIRM for all -- (the cavities and antenna alone are worth
$500).
Bring your pickup truck. Pickup only. Portland Oregon area. Email to
arrange
details.

thanks,
Joe K7JOE

4576. WTT: Drake "7" line

4579. SGC software help

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-04 00:00:00 UTC
From: Paul <pwende@aimtronics.com>
Message-ID: <8esp4nsls1@nnrp1.deja.com>
Source record: 80238

Good Day!

I just purchased an SGC SG-2000 radio and SG-230Pro tuner (used), but unfortunatley didn't get the software that comes with it. The tuner has a program called Microtune and there is software for the radio as well which allows it to be run via the RS-232 connector.

I would very much appreciate it somebody out there could email me the files from the disks so that I might be able to use the products to their full extent.

I contacted SGC but have received nothing but "static" from them. Appears only the original buyer is entitled to software support. The software is supposed to be free according to the brochures but I have been told by them that's not the case any more.

Thanks to whoever might be able to help me.

Cheers!

>Keeping the ground short is always better.

ok, here's my additonal 2 cents worth:

There are two different types of grounds, electrical and RF.

RF ground, a simple 1/4 wavelength for the operating frequency (can be small guage wire streched out around the room with the end taped up because it will get hot) counterpose attached to the tuner ground will work, a dipole doesn't need one.

Electrical/lightning) ground requires a #6 or better attached to a ground rod and cold water pipe coming into the building . All electrical grounds should be connected, one should not use a seperate ground rod for each item, although one may use several ground rods, they should all be connected to the cold water pipe entering the building. Don't use gas or hot water pipes. It's best to unhook your antenna lead and connect it directly to your ground during storms.

Both RF and Lightning travels the surface of the conductors
so a smooth surface rather than braided is better.

There are devices to protect your systemy from lightning for sale
at various places.

joe

From: hamke4wy@aol.com
Message-ID: <20000504184712.09323.00001049@ng-fq1.aol.com>
Source record: 80244

Brad, this may help some. I just posted it on the Icom reflector. Concerning the 736 you can use it with the Goldline GM-5.
You just need to run the mic gain a little higher with a small amount of compression. HC-5 element may sound better than the full element. Can't remember if the 736 has a mic tone control, if so adjust it fully clockwise for full treble when using the full element(has more bass response than the HC-5)and straight up with the HC-5.

Note below concerning the Heil preamp.

73 de KE4WY Jim

From: HAMKE4WY@aol.com

I have been using Heil stuff since the early 80's. I now own two Goldlines and have two HC-5's, and an older unused HC-3 element in the deskdrawer. Personally I prefer the Golden with the HC-5....never warmed up to the HC-4. To say I like his stuff is an understatement.

With the 746 set the mic gain and compressor gain to about 12 o'clock....don't worry it will not sound like you are running compression since the mic circuit gain is about 10 dB down from most rigs. TCN at default for the HC-5 and about plus 10 for the Goldline Full element. You typically need the compressor on to make up for the reduced gain in the Icom circuit....remember they are designed to work with mic's that have a built-in preamp such as the SM-6, 8, 10 and 20......The Heil has no preamp so turning on the compressor and running it ((conservatively) makes up the 10 dB. Naturally the settings may very slightly due to your voice characteristics and watch your ALC.

One item I do not like is the use of the Heil preamp, I tried more than one with a 706, 756 and 775 and would get motorboating trying to use vox and one interesting thing I noticed when it is in line with an HC-5 it changed it's characteristics making it sound more like an HC-4.....I would rather run a little compression than use this device. (Tried (3) thanks to local dealer and all were same). As far as VOX, I use a foot switch anyway.

Hope this helps.

73 de KE4WY Jim

The part may be available, but you don't want to have to pay for it. A close friend of mine had a TL-922 bandswitch replaced at Kenwood West a couple of years ago, and they charged him over $700.00, with the bulk of the charge being for "parts" (the bandswitch itself at about $500, as this was the only part they replaced).

I don't know if Kenwood overcharged him, or if this is a typical price for this service, but I think in this case I would have bought another used TL-922 (the going prices I've seen are around $800 to $900) and kept the original unit for spare parts...

There have been postings in the past regarding the squelch. If I recall, there is an extended button-pushing procedure that will reset this function to the default. You may have to wait till the site you mentioned comes back up, or do a search of past newsgroup posts.

Put in fairly simple (and not quite accurate) terms without very much major math ......

If you feed two perfect sine wave signals into a non-linear device you get a whole bunch of stuff out in addition to the two perfect signals you put in. If the device is an amplifier you probably will see:

An amplified version of the signals you put in
The harmonics of the input signals
The mix product of the two signals you put in
The mix product of the second harmonic on one signal with the first signal
The mix product of the two second harmonics
and so on until you run out of time to count harmonics and their mix products.

Due to the rather odd way the math works out "third order" products are the ones you get from one signal mixing with the second harmonic of the other signal (1 + 2 = 3 sort of thing). If the two signals are close together then this mix product will also be close to them.

An example:

Signal A = 10.0 MHz
Signal B = 10.1 MHz
Twice B = 20.2 MHz
Twice B - A = 10.2 MHz

If I'm tuned up listening at about 10.2 MHz and two pretty strong signals come along near by, I really do not want them to generate another phantom signal that is also on the same frequency I'm trying to listen to.

The higher the number of the third order intercept point the less phantom signal you get. A pretty good number on most ham gear is +20 dbm, A lot of military gear comes in around +30 dbm. Stand alone amplifiers designed for front end work generally come in around +40 to +50 dbm these days.

Hope this helps

4604. Re: To ground or not to ground???

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-05 00:00:00 UTC
From: Bob Camp <bob@cq.nu>
Message-ID: <mVIQ4.8911$X91.24791@news02>
Source record: 79963

This is really two questions and the answer to each one turns out to be different:

The first question is - should I ground to protect from lightning ?

The answer is yes and you need to do it right or it's not going to help a whole lot. If lightning hits your antenna it wants to get straight to ground. If you give it a nice straight path it'll take it. If you don't it will find another way, like through the living room ......

The second question is - how do I come up with an RF ground on the second floor ?

The answer is you don't unless you own a copper mine :) Fortunately it's not necessary because the rf ground (if you need one at all) is needed at the antenna rather than in the shack. It's always a good idea to tie your gear together, but that's not the same as grounding it.

Hope this helps

Source record: 79965

My two cents worth ....

Comparing it to an ICOM mic the Heil stuff does not put out any where as much voltage for a given level of voice input. At least on a 775 DSP I had to go to an outboard pre-amp to get enough to drive the radio. The Heil mic was not enough by it's self or with the Heil pre-amp. It is a good mic though and I use it a lot.

I haven't seen the ft-90 but could they use the same plug as some of the computer cables ?

I have an Icom 706 and I think it is a rj-45 plug on it. I got a computer networking cable and just cut off the end about 5 inches long and spliced it in. With the low inpedance circuits it soes not seem to be as critical as to the shielding as the older tube stuff used to be.

DATAK is alive and well, I'm looking at the catalog now. They now have a set of ham radio sheets (2 different sets). The p/n for the ham sets are:K95B (black), K95W (white). The updated ham sets are: K70B and K70W. The old standby markings are the 948 and 949. Look under LKG Industries Co. Datak Div.
Here in MD, I use Mark Electronics (stocking dealer) 301-595-5040. They're OK people. de K3HVG

Not an award I'd want... But seriously, I thinking grounds and grounding are one of the most " old wives tales" ridden area of ham radio . Even some of the info in the ARRL handbook is in error. This should be changed. Most of the gross errors pertain to lightning protection practices. But the common thought that lack of a good rf ground at the shack is a cause of rf problems, or TVI etc., is just plain wrong. Most rf in the shack problems are caused by a lack of decoupling between the feedline and antenna. Most TVI problems are caused by fundimental overload of the consumer gear. TV's, phones , etc. This will happen with or without a ground on the ham rig. I went thru rf problems with one of my rigs for a long time, an icom using a homebrew mike setup, and thru much testing pretty much proved to myself all rf in the shack problems are ant/feedline related. Not ground. Grounding is a micky mouse way to "patch" the real problems which are antenna related. Usually lack of a balun etc. And many times adding a ground makes things worse. BUT!!! this is not to say you shouldn't have a safety ground for high voltage gear, you should. But that ground serves a totally different purpose. As do the lightning grounds. I consider them all different systems doing different jobs. The need for an "rf" ground in the shack is not needed at all, if the antenna is complete. And most are. The rf ground should be at the antenna if one is needed. IE: radials, etc. MK

4614. HELP: Receiving Problem with Icom W32A Dual-Band HT

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-05 00:00:00 UTC
From: Artur Leung <aleung@REMOVEsunflower.com>
Message-ID: <3913804F.388CB174@REMOVEsunflower.com>
Source record: 79973
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

Hi,

I just purchased an Icom W32A dual-band HT. Unfortunately I have
some trouble with its receiving function, and hope that folks on this
newsgroup could help me determine whether the unit is defective or not.
The problem is that, no matter which band I tune to, including 2m,
70cm, weather band, and avionics band, I could hear either human voice
or music, but is highly distorted. My friend suspected that the
interference was from a local FM radio station operating at 91.5MHz. I
tuned my radio to that station and the voice matched the distorted voice
on my HT. The distorted voice even broke the tightest squelch (SQ8)
this afternoon. Also, the radio cannot efficiently receive weather band
signals, like 162.475MHz from a local station.
My Icom scanner, R10, does not have the problem described above:
its 2m receiveing operation is not affected by the radio station, and it
could receive that weather station, although the signal is pretty weak.
The experiment was performed with the same antenna. That radio
station's signal has been problematic, and I could even hear the
broadcast program from my computer speaker without a FM receiver......
however, I feel very uncomfortable, especially after my friend showed to
me that his 2m HT (don't know what brand it is, but is certainly not
Icom or Yeasu) did not receive the distorted voice from the radio
station......
So folks, do you think if the unit is defective, or is it just the
design of the W32A? Thank you in advance for your information.

Artur

4615. Re: Heil Goldline Mic's anf ICOM Rigs

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-05 00:00:00 UTC
From: David Rich <kgous@swbell.net>
Message-ID: <39138723.4B7BFA67@swbell.net>
Source record: 79974

I own a 775 DSP and I have tried a couple of Heil microphones with it
and they both needed the pre-amp. If I did not use the pre-amp I would
hardly move the COMP meter with the COMP selected no matter what Mic
gain or Drive settings.

The SM20 microphone works great when I set the DSP transmit high pass
filter to 200 Hertz!!!! I have plenty of ALC and Compression if I want
it.

I have a friend with a 756 that needs the pre-amp for the Heil headset
to work properly.

By the way, I would not bother buying the Goldline if your ICOM requires
the use of the Heil pre-amp. The pre-amp really cuts the low frequency
response of any microphone connected to it. This is due to the bypass
of capacitor in the pre-amplifier not being large enough. I think it is
4.7uF.
A 33uF capacitor might increase the low frequency response enough to
benifit from the Goldline.

Good luck,
Dave KG0US

1st thing - I got my Novice in 68, Gen 69 and Extra in 72. I have just got back into the ART of Amateur Radio and found few changes. I am not a CBer. My wife bought me a 10 meter rig for my car. Works great but is short on output. I have already had some great contacts with it but it could use more than 25 watts.

Seems there are no REAL 10 meter mobile amps available. Everything I find are these CB 11 meter rigs that have been modified. I have yet to find one that will work properly on 10 meters. They either over drive, band splash or wont handle SSB. Fine on AM.

The other problem with the several I have tried is every one of them have terrible SWR. I have my radio and ant tuned midband (10 meter) to an almost perfect 1:1)

Does ANYONE know of a real source of 10 meter mobile SSB amplifiers that are really tuned to 10 meters?

Thanks
Mike

4617. Yaesu 727R Service manual?

Back when...I sold parts at an industrial parts house in NJ. We sold stuff by a company called Datak for doing panels, letters, meter scales, etc. I've hunted high and low, and all I can find is Datak PC board stuff, but none of the other stuff.

I need to re-label a panel on a radio. And make a custom meter scale. I seem to recall Datak had all of the above.

But beyond that, anybody have any suggestions for custom meter face/scale?

This all for a SWAN 240 I added an "S" meter to and in the process had to go from the 400MA meter in it to a 1MA and a PA cathode shunt to ground.

4629. JRC-245 HF/VHF transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-05 00:00:00 UTC
From: Walton Stinson <wstinson@worldnet.att.net>
Message-ID: <N7sQ4.49011$fV.3036082@bgtnsc05-news.ops.worldnet.att.net>
Source record: 80071

For Sale

JST JRC 245 160 to 10 meter 150 watt transceiver with
general coverage plus 6 meters in all modes
(AM/FM/SSB/CW/RTTY). Has a built-in automatic antenna
tuner. The tuner settings are
automatically stored in memory for fast QSY. It has 3
antenna connections, selectable from the front panel.
General coverage receiver tunes from 100 kHz to 30 MHz
plus 48 to 54 MHz.
Variable Bandwidth Control for IF.Variable bandwidth
permits the standard 2.4 kHz filter to be narrowed
continuously to 800 Hz.Includes Passband Shift (PBS),
dual noise blanker, three step attenuation,
I.F. notch, selectable AGC and all-mode squelch.Notch
tracking is automatic. Once tuned, the I.F. notch
filter will track
the offending heterodyne (± 10 kHz) if the VFO
frequency is changed.
Full break-in, variable CW pitch, and built-in
electronic keyer.
Two separate VFOs are featured for split frequency
operation.
Memory registers store most recent VFO frequency, mode,
bandwidth and other
important parameters for each band.
Each of the 200 memories stores frequency, mode, AGC
and bandwidth.
A built-in RS-232C interface facilitates computer
control.
Built-in power supply accepts 85 to 132 VAC.
Beautiful colored LCD display
Original manual, AC power cord

Note:
Includes two 500 Hz CW filters and two SSB filters (1.8
and 2.7 kHz): CFL218A, CFL232, CFL316 and CFL318. The
three optional filters cost $139 each. Also includes
optional NVT-56 desk and NVT-57 handheld microphones.

Check out the great review at www.arrl.org in the
members only equipment review section.
For specs, go to
http://www.universal-radio.com/catalog/hamhf/0550.html

4631. Icom 746 vs. Kenwood 570S(G)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-05 00:00:00 UTC
From: BillBischoff@nettally.com
Message-ID: <L7sQ4.51323$MB.1130147@news6.giganews.com>
Source record: 80073

Question 1 -

Ok guys, I've been out of the hobby for 17 years so don't jump on me for asking a stupid question (the technology sure has changed since 1983!!- 10 days ago I was all set to fork over the greenbacks to get a nice new Kenwood 570S(G). This week, however, Icom muddles my plans by adding another coupon on the Icom 746. Now, one can buy the Icom 746 for about $75.00 more than the 570S(G).

Yes, it seems like a no brainer to me too - for $75.00 more it appears I can pick up a superior rig plus 2 meters as well - so is there something I'm missing here or am I just lucky to have moved slowly.

Question 2 -

Assume I buy the Icom 746. How effective can I expect the internal automatic tuner to be. I am in a no-tower neighborhood so will be likely living off of dipoles for a while. I will probably be using a 4 band dipole (separate elements for 10, 15, 20 and 40 meters. Can I reasonably expect to be able to work 80 (I realize very inefficiently) using the 746's auto-tuner? Would I get better results if I went with a separate, external auto-tuner - like the AH-4?

Thanks for your answers in advance.

>
> Dan
> N7SLC

Why would grounding be a must? The only reason I can really think of is to reduce shock hazards when running gear with lethal voltages involved. If you were running a 12v radio from a battery, you would have no need for a ground whatsoever as long as the antenna had it's own ground system, or was ground independant as in a dipole etc. A ground wire running from an upper level to the ground will almost always act as an antenna on some band or another. If your antenna doesn't require a shack ground to complete the system, and very few do, a wire running thru the house is just asking for trouble. Also beware the coax/cap ground wire schemes. They don't work as advertised. In the end run, they act just like any other type of wire. I don't use a shack ground at all anymore. And have less problems than when I did use one. " All power levels and bands up to about 1400w output" .The only ground I have is the ground pin of the 240v feeding my amp. And with the coax connecting to the rig, all is at ground potential as far as shock. Being I use antennnas that are ground independant or have radials at the antenna, I have no need whatsoever for a shack "rf" ground. If you have "rf" problems in the shack, you don't have a ground problem, you have an antenna /feedline problem. Or the antenna is just too close to the shack to keep from overloading. Also camping as an example, I've never used a ground yet, and never have missed it as far as my radio is concerned. It is one less thing to trip over in the dark..:/ MK

VX5 has excellent battery life and is light with good power. IMHO it has a steep learning curve. Wish it was as easy as IC-24AT that I had before. Also, it needs different antenna (SMA) and different headset connector than nearly all the other HTs.

Ignacy, NO9E

4644. Re: Icom 746 vs. Kenwood 570S(G)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-05 00:00:00 UTC

Message-ID: <3912cf86$4$vtanpl$mr2ice@news.uga.edu>
Source record: 80086

IC-746 is one tier higher than 570. It has an extra level of filtering and RF rather than AF speech processor. 2m is icing on the cake. For serious operation, it is an obvious choice if 570 is not much cheaper.

Hi George:

If you are handy with a computer, or know a friend that is, you can do everything you need with a computer.

There are actualy a number of possibilities. You can make a meter scale with a CAD program and after everything is just right, print it out on a glossy photo stock paper which ink jet printers can utilize. The resulting prints are gorgeous. Some fellow made a scale for a meter and I got it from him by e-mail. He had purchased a CAD program for about $20 and I also bought that program. The scales can be changed to whatever you want to use by just replacing the numbers and the name. Works great. Previously, I just took an existing meter and replaced the numbers with new numbers cut out and pasted on the existing numbers - then photocopied the face. Presto.

Computers can also print nice decals. I just built a clone of the old one tube Ameco AC-1. The original had a wonderful oval yellow "Ameco" logo with lighting bolts above and below. I made the decal by simply using a drawing program and finding a lighting symbol. After printing it out, I covered the front and back with clear mailing tape (the 1.5 inch or so wide stuff). This protects the label and provides the same tension front and back. Then I cut the oval out and pasted it on the clone. It has the same shininess as an original decal. It is the center of attention of the rig.

Another method can be used - especially for logging numbers around knobs. You create the numbers with a CAD program or a drawing program. Then, use an ALPS printer. The ALPS printer is like an ink jet printer, but it uses a film rather than ink. You then purchase 8.5 x 10 decal paper and print onto that. The advantage of this printer is that it does not rub off like ink jet stuff. In addition, the film is available in white, gold or platinum - in addition to all the normal colors. So, if I need white printing on a black front panel, I can do it.

Otherwise, you can use the decal paper with an ink jet and if you expect wear, cover the printing with the wide mailing tape.

Have fun.

73, Colin K7FM

HI

Does the ADI AR-146 two meter transceiver have any serious flaws that I should know about? It seems to be the least costly 2 meter transceiver currently available. And I am looking for a low cost high power unit. This seems to be the best choice. Any thing I should be aware of with this unit that would possibly nix this choice?

Thanks for your input.

Steve

Phill,

That is the same radio I have. I love it. It is a bit short on the receiver sensitivity but for the price, and the fact mine was a b'day present from my wife, it is a great rig.

This Palomar you have, it has a physical switch for SSB? One that I tried did not and the output was horrendous. The swr's went off the scale. Several contacts I was talking with while I was testing all said the same thing. With the unit off, It was great, on, it sound off freq and AM.

Thanks
Mike

4663. Scarcity of 220 MHz Gear

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-06 00:00:00 UTC
From: "Al Lorona, Jr." <al_lorona@agilent.com>
Message-ID: <3914F6AA.715861BB@agilent.com>
Source record: 79905

To whom it may concern,

Why is 220 MHz equipment so rare? Some of the big manufacturers don't even *make* any. A quick check of currently available gear revealed only two radios: an HT and a mobile, each from a different manufacturer, and I believe the HT is scheduled for obsolescence soon.

It's always been this way, hasn't it? Is there a reason why?

At times, the same manufacturer, if it even produced a 220 rig, would have a 2m, a 220, and a 450 MHz version of an HT, and the 220 model would be way, way, more expensive than the other two. How come?

Al

The Kenwood TS 870's receiver is easily "crunched" in adjacent strong signal conditions. I wish that they would come out with some better IF filters for it. Some people have done a conversion using other IF filters that make it a much more useable rig.

I like everything else about my 870 ... it's just the receiver's proneness to "crunch" in the presence of close (within 20 KHz) signals that are very strong that bothers me.

Now forward a copy of this to all the ham equipment manufacturers and tell them to get their act together. Some have just forgot the fundamentals, we all should be using +30dbm 3rd order IP receivers with good noise floors. We all just tired of the me too gadget boxes that dont deliver.

Source record: 79992

As if this all isn't confusing enough - here's another weird item
about third order intercept point:

When you do an amplifier what you usualy measure is the output
intercept point.

When you measure a reciever you measure the input intercept point.

Most of us, myself included have a nasty tendancy to omit this fact
when talking about all these numbers.

If the amplifier has a 20 db gain and a +50 dbm output third order
intercept point then it would have a 30 dbm input third order
intercept point.

Of course all this assumes that the beer hasn't caught up with my
ability to do simple math :)

Boy, that is a tough call. I have had the W32 for 2 years and like it a lot. But, it does get a lot of overload when close to a strong station.

When I was in D.C. I kept hearing a local taxi company dispatch -- no matter what freq I was on. The hotel I was in looked right over the taxi dispatch lot. No matter what I tuned, those guys came through.

When I lived in Dallas, years ago, everything in my apartment received a local AM station that was a block away. I mean everything, modem, telephone, even my toaster.

It may be bad or not.

If it turns out to be OK, you are gonna have to move or get a different HT. :(

good luck

Concerning the imd or crunch as you call it. I had heard that comment also and have seen the spec's from QST on the 870 as I have on the 756 Pro but when I had an 870 here (was a later model above serial #807xxxx) and would switch back and forth during contests with other rigs to A-B it, it performed no worse than any other rig (756, 775, 781, 1000D, 1000MP) here. Nice thing about the 870 it has beautiful 1st class transmit and receive audio that's simply hard to beat. You put the right mic on it and you will get numerous uncoliciated excellent audio reports. Only thing I did not like about it was the noisey keying relay and the way the controls and buttons were laid out on the front panel.

Also, I have sit back and not made any comments on the 756 Pro just reading some near panting posts from people who have not owned one but I have A-B'ed a 781 and a 756 Pro here during crowded and uncrowded band conditions which even includes a contest environment and the 756 Pro here performs no worse than my 781. I have no more difficulty copying a less than optimum or weaker station with strong adjacent QRM present using the 756 Pro.

Well, that's my experiance. no preamp needed. I didn't think I shouteD and yes
I did have to raise mic gain quite a bit higher than using an Icom amplified
mic(Hey! let's face it it does have an amplifier in it). Also don't be afraid
to use a touch (note a touch) of compression.

Cliff,

I bought the back half last year from East Coast Transistors for about $75, so
your right!
The REAL cost is the time/labor to replace it.

Hi Jim,

I believe you when you say you did not need the pre-amp on your 775DSP. However, I and several other guys found that we did need some sort of pre-amp when using a Heil element on our 775DSP or 756. The question I have and have e-mailed ICOM about on several occasions without any reply is why some appear to need the pre-amp and why some do not? Some much for their theme of get in touch with ICOM!

The single point I consider MOST important is the 1000MP has dual receive.
Once you use dual receive in a DX pileup with stereo headphones, you will
never want to be without it. (IMHO)

Having owned both, if I had to choose, I'd go with the 870.

The MP gets very expensive (almost to the 1000D level) when you consider you end up adding almost $800 in "optional" filters (optional - but very much needed), and almost have to buy an after market 'front end filter (Inrad) for its rather high noise floor.

Stock - the 870 receives just as well - and has a quieter receiver.

Not 'gospel' -- just an opinion.

Dave, that's always been a complaint concerning the Heil stuff used with Icoms. My station here now is a 781 with a Heil Goldline and a PRO Audio type mixer (EQ) which does have a preamp...but I got it for the EQ....do not run compression as a whole with this rig. Pickup the audio from the back of the rig verses the front mic plug.Without the Mixer in line and using a Heil Goldline connected to the front mic plug I get plenty of ALC with the compressor either on or off. 1 o'clock setting for no compression and 9 o'clock setting with compression.

The other rig is a 756 Pro also with a Heil Goldline. I plug the mic directly into the mic jack and run a slight amount of compression ...mic gain and comp gain straightup 12 O'Clock. I get my EQ from the rig. I get plenty of ALC without a preamp.

One thing Hams need to remember in simple terms when you get ALC it is an indicator of DISTORTION so instead of looking or adjusting for full ALC per indicator in rig I adjust or setup rig for 1/2 scale of what is normally recommended in manufacturers manuals. In other words instead of straightup 12 O'clock which is the end of the ALC scale on the 756 Pro, I adjust mic setting for what would be 10 O'clock........hence a cleaner signal. Hey!, I like that word hence..

Icom does not support the Heil products nor does Icom test with Heil
mics. Heil mics generally work fine but generally require his preamp
installed.

Asking Icom why on some 775DSPs have to crank up the mic gain and
others do not when using a Heil mic is not a question for Icom, but
one for Heil.

Even some of the Icom mics will drive at different levels. It is not
unusual for the hand mic to require the mic gain be set at 12:00 where
with the desk mic be set to 9:00 position.

Heil Sound built the preamp to make his mics work with the Icom
product line. As some others have found merely increasing the mic
gain and compression will allow you to use Heil mics without the
preamp.

The Icom mics have a pre amp in them The hand mic HM36 has a FET
preamp built into the mic element and the desk mics SM-6, 8, and 20
have pre amps built into the desk stand. The SM-8 when set to the "H"
position provides a drive level adequate for the older products
ie: 720A, 730, 740 which require more drive than current Icom
products.

Most manufacturers are not in the position to provide support for
using after market products on their equipment. That support is the
responsibility of the after market product supplier.

Hi Tom,

I think the reason I purchased this unit is the same as yours: the
dual-band feature, especially that I could do a crossband full-duplex
operation. There is a reply of my original message from Radiskull, and he
reported that he had the same problem with a strong local station flooding
the front-end. Hmm..... I don't know what I should do. 8-(

Hi Radiskull,

Do you think if all Icom HTs do the same? What about HTs from other manufacturers like Yeasu or Kenwood? The unit seems to be in slightly shape this morning and I didn't hear the strong station's signal with the squelch set at AT. I am still a little bit worry about its performance, especially I will be using it for 2m repeater operation locally.
Also, do you know the frequency assignment of the weather bands? I thought that channel 1 should be 162.400MHz but I receive the station on 162.475MHz on channel 1. Thanks.

Hi Clif,

Could you please elaborate more on the topic? I am new to the ham community and this is my first ham equipment. Do you think that it is the nature of the W32A design, or is my unit a defective product? I am trying to understand whether this is something I could fix, or I have to send the unit back for replacement, or whether it is the problem from the radio station, or it is just the nature of this particular HT. Thank you very much and I hope to hear from you soon.

I have a VX5 and love it. You can program the radio from the keypad, but the programming cable and software are well worth the investment. The case is milled from a block of aluminum, so it's a pretty tough little rig. The supplied Lithium Ion battery will power the radio for a LONG time between charges.

TS-520S Tranceiver, VFO-520S Remote VFO, Hi-Z Desktop Mike (Yeasu) and Digital Display (Not the DG-5), User & Service manuals for the TS-520S and the user guide for the VFO-520.

$375+shipping or trade for late model dual band mobile Eg: ft-8500, IC-2710, DR-610, TM-V7.

Electrically, all devices are excellent. They are 19 years old and have some scratches, none disfiguring. They have not been mobile, although I did use the TS-520S on field day one year. The TS-520S gives me a constant 100 - 110 watts out on 80-10, using a MFJ-949E as reference. 160 gives 100 watts on the dummy load.

I am a non-smoker.

The digital display is a kit I got from All Digital Electronics. It works, but it isn't the selling feature of the set. All devices work fine.

I'm selling it because I got an IC-746 for HF and I'm looking for a decent dual bander to play around with packet.

4727. Re: Heil Goldline Mic's anf ICOM Rigs

I run a Heil Proset headset on an Icom 275H (2 meter all-mode) and can barely get enough gain for proper drive even with the mike gain control on the rig all the way up. Seeing as how from time to time I switch from the headset to an Icom desk mike, I got the Heil inline preamp and can now switch back and forth from headset to mike without having to muck about with the gain control.

I checked ARRL.net and found a 1986 QST review of the TS440. Looks like a pretty nice high-end all mode HF rig with 200W of power on all but AM (110W). It was priced at $1200 in 1986, so from a price perspective accounting for inflation it would probably compare to either the FT-920 at $1450 or the FT-1000MP at $2800 (per the current HRO catalog). If you're looking for a rig in the same power range at the TS-440 then you'd have to move up to the FT-1000D, which currently weighs in around $4200.

I've never owned a TS-440, so this is paper tiger research. Hopefully some folks with hands-on experience will be able to provide a more detailed comparison.

A couple of years ago this would have been fine to say. Now with the
wide band coverage of some of the newer rigs it could not cost very much
to include the 220 band. Look at the Icom 706 series and the Yaesu rig
of the same general type.

Source record: 79850

Hi Andrew,

I did more tests today with the help of my friend, who is also a ham.
We went to an open field and tested the radio, and the results turned out to be positive -- squelch was not broken by the strong local station most (99%) of the time, and we were able to hit some repeaters even on low-power mode (500mW). Weather station and avionics band receiving was also not a problem with the included antenna.
Also, several ham friends told me that HTs can easily be overloaded by strong local stations, be it FM, TV, paging, etc. due to the HT's wide receiving capabilities. He suggests that I purchase an intermod filter if the problem persists.
Hope this information helps you to decide whether to get the W32A. I like it better after today's test, and plan on purchasing some accessaries in the near future.

>and the way the controls and buttons were laid out on the front panel.
>
[snip]

I too have an '870 and I like it very much. I have no experience with the 'MP, however.

I second the comments about the audio. I'm a firm believer in using "hi-fi" phones (Nova 40) and microphones (Electrovoice) and doing any frequency shaping electrically, not mechanically. (I tried a Heil mike/headset for about 5 minutes and returned it, yuck). I get frequently get unsolicited favorable comments on the transmit audio, even when using lots (>15 dB) of processing.

The split-band processor works very well and is a technique that I have used for years ("Split-Band Speech Processor" , hr magazine, Sept, 1979).

Using the dual menu system, you can setup a "punchy" transmit audio characteristic for DXing and a "hi-fi" characteristic for ragchewing.

The lack of a true dual-receive capability might be a downside to some but I have enough trouble listening on one busy frequency without listening to another one at the same time <g>. If chasing DX using split freq, it is simple enough (for me) to press the "TF-SET" button and hear what's happening on your TX freq.

One disappointment was that the antenna selection feature isn't memorized in the dual menu system. As a vhfer, I wanted to have "virtual Radio 1" use antenna 1 for h-f and "virtual Radio 2" use antenna 2 as the vhf transverter spigot.

Another plus to me was the physical size. Sure you need an outboard power supply, but in my cramped shack this is under the desk. The full remote control is also a potential plus, although I have yet to fully utilize it.

My 2 cents.

73,

The FT1000MP sits in the shacks of most of the world class contest stations for good reason. I have had mine for three years and find it to be a fabulous performer upgrading from my TS850 which I still have as a backup (a great non dsp/non dual receive rig). I also have a Drake R4C and have used an Icom 765. A number of local hams have upgraded to the FT1000MP in the last couple of years and ALL comment on the great receiver with its high dynamic range, superb selectivity, and quietness. It will be intersting to see how Yaesu tops this rig. I hope they don't take a step backward like Icom did with the 756PRO and its mediocre receiver dynamic range and apparent imd problems according to numerous online posts and the QST review. I guess all dsp rigs are not quite ready for prime time yet. Good luck in buying a new rig! --- Steve KK9ZZ

Primarily because 220 MHz is not a ham band in the rest of the world.
It's assigned to other services in Europe and the Orient - not much
demand for rigs for amateurs.

Also, very little convertable commercial gear available for 220 MHz FM. High band and 450 MHz commercial repeaters are available on the cheap, not so for 220. Also, bandpass cavities harder to come by, etc. Not the entire reason in itself for the low utilization of 220, but it doesn't help...

Al,

Most of the world does not have 220 MHz allocations .. and that includes
the 50% of all hams who are in Japan.

On top of that, there are large areas of this country with little or no
220 MHz activity.

No demand = No supply.

Phil

Source record: 79864

The 220 MHz frequences cannot be used by hams in most countries.
Consequently, a limited supply of such gear is manufactured by
those companies willing to do so. And the price will be higher
because they will not sell as many (simple supply and demand).

Why couldn't they do this on HT's? This would be a heck of a lot more
useful than 6 meters or 1.2 gig in a multi band HT.

or inexpensively for 446-450 amateur David N5JHN sammy16236@yahoo.com

4762. SGC good news

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-07 00:00:00 UTC
From: "Rudy Marcelletti, K8SWD" <rudym@net-link.net>
Message-ID: <391624fe$0$95115$44a10c7e@news.net-link.net>
Source record: 79876

SGC has always treated me fairly and promptly and a lot faster than the Japanese companies, and most American companies, especially the automobile companies! Some products have longer warranties than others. That is not a statement from the maker that one product is better built than others, nor does it mean they are going out of business. Look at what the intended use of the 2020 radio is--remote bush portable use. Should SGC warranty the product after you get it wet in a river or roll it down a mountain? The company will stand behind its product, I'll say that from personal experience. See what Yaesu does with an FT-100 after the warranty runs out, and also tell them you dropped it in a river, rolled it down a mountain and left it overnight in a snowbank. My SGC 230 coupler has been wet, hot, cold and snowed upon for over 3 years now and still works fine. The only time I mess with it is to change the wood post--it rotted, or change the antenna set up I am using, or take it portable (leave on the ground in the snow). Damn fine piece of equipment and a very fine company.

WTB AMERITRON AL-80 MOD KIT

If anyone has the 10/12 meter mod kit for this amp and is willing to sell it
to let me know, I need it.
Cutting the green wire doesn't work for this amp, must have mod kit.

Source record: 79880

It's a Palomar 300 model amp, and it has 3 leds on the left front for power on, pre-amp on, and TX. Then it has 3 switches on the right front for pre-amp on/off, SSB/AM and power on/off. Worked South America all day today breaking through pilups and getting 5x9 reports. Whatever works!!

I have used all three and like the Pro better for a number of reasons. I have A-B'ed the Pro receiver with a 781 I own and the receiver performs no worse with close in QRM and appears just as sensitive as the 781. The Pro has been used here during three contest and it performed fine.There are many features the Pro has over the 1000MP and the 870.

I take what people say like a grain of salt and do the same with what I say.

Well, I love mine. I think that you will experience front end overload next to a strong transmitter with just about any handheld. The problem is that they are all so broadbanded (we want that dual band and extended receive, don't we? well, it has a price)

So, since I don't live next to any strong transmitters, I have been completely happy with mine, and would heartily recommend one.

But as I mentioned to you, I have seen the problem when I was in DC. Hotel right across from taxi dispatch I got em, no matter what I tuned.

oh well..

cheers

I have just started getting into ham radio and was looking for advice on equipment to buy. I also want to get some advice on books and/or online study materials for the technician class license.

As for advice on equipment. I am looking for a good VHF/UHF mobile unit and a good 6m/2m/440 portable unit. Price is not a object, I am willing to spend the cash. I just want good reliable equipment that I will not have to upgrade or replace in the near future. I also need some information on an antenna rig for the mobile unit. I know that I do not want a permanent mount because I don't want to drill a hole in my vechile.

I would like to thank all you for your help in advance.

Al,
ADI/Premier/Pryme offers both a handheld and a mobile radio in the 220mhz band (that's all one company) but you are right, prices are a bit higher. That's the law of supply and demand. When we, as hams, show that we want and will buy 220mhz gear, more gear will be made and sold, and the more sold, the lower the prices. The no-code techs and their demand for 144/440 mhz gear in the last several years has done wonders for the prices of this equipment. As an example: the ADI AT-600HP has gone down over $100 in price in the last 2-3 years.

Remember the law of supply and demand. Only North America has a 222 Mhz
amateur band. This is only a small portion of the worlds amateur
population.

I agree the Pro is the best of the three (I really like mine) - but the original question was "which is better the 870 or the MP" - someone else through the Pro into the mix...

I'd still go with the 870 over the MP...

Howdy Al -- it has been mentioned that many countries don't allow operation on the 220MHz band -- thus a very low sales rate and not worth the marketing effort.

Just bought the ADI AR-247: 1.35 Meter (222 MHz) Mobile -- Very pleased.
See URL:
http://www.adi-radio.com/radios/

This makes my IC-03AT surplus to my needs -- see it on auction at URL:

220 (222 these days) is **NOT** a frequency range available for amateur use in most of the world. Therefore the market for gear is very small. Were it a widely available band, particularly in Japan, we'd probably find more equipment on the market.

When I started on 220 about the only commercial gear was the Clegg (US Made) FM-21. Around here the only people on 220 were the 50 or so of us who got a group purchase of the FM-21 and a few "pioneers" who had homebrew gear on AM and SSB.

The situation with 1.2 GHz is nearly as bad and until about a year ago the few TM-541 Kenwood rigs were mostly ones that were bought in Japan and brought back. I've known several people who have them and got them from airline pilot friends who bought them in Japan. They are now being carried in limited quantities in this country.

I found it interesting one person was buying up new and used 03AT's.
He was using them in a kit for Dog tracking collars. These were used
when using dogs for raccoon hunting. I think he was slewing the
frequency to a range it was legal to use than was close to the
operating range of the 03AT.

Alinco also makes a great (reasonably priced) hand held, and Kenwood also has mobiles which are indeed more expensive than their 2 meter counterparts. 222 band is still pretty quiet where I am, and I'm glad it hasn't turned into "11 meters" yet. This is a real advantage, so I don't mind the extra cost.

Radio Shack sells a controller that you can use with your radio. Most stores don't stock it, but you can order it. It's in the catalogue.

There are also many plans floating around. Use your browser, and enter "simplex repeater" or "simplex repeater controller".

I have a friends Kenwood PS-30 power suppply that puts out 13.5 volts tuil I put it under load. With even a 500 ma load it drops to about 5 volts.

Without reinventing the wheel, anyone have any ideas on this problem ?

I did not get a schemat for the supply, but guessing it uses a version of the 723 regulator circuits.

You can get it from Ameritron at minimal cost, simply fax or mail them a
copy of your Amateur Radio License, and they will send it right out to you.

I wasn't aware of the restriction on the antenna. That's a definite negative. As far as power and deviation (I assume that's what you meant by "Dev"?), I'd think the HT could be engineered to change its behavior on FRS versus 70cm.

Source record: 79802

Yes, it's not legal to use a ham radio on the F.R.S. Repeat that
once again just to make sure you fully understand.

Note that the VX-5r has a half-deviation mode that makes it perfect for
this application. Practically speaking, if you're not blatant about it
and stay within at least the spirit of the rules with power and antenna,
no one is going to notice or should care (insert standard warnings about
sprectral purity here). Of course, this is not an endorsement of
using ham radios in that band....

It's probably better to actually get an FRS radio, for various
reasons, but it is nice to know that you can interact with them
properly if necessary, since they are beginning to get more common.

The AR-146 (which is now discontinued) included both CTCSS decode and tone paging, at no additional cost. These were always built-in, never an option. Our current model, the AR-147+ features not only CTCSS (encode/decode) and DTMF paging, but also Digital Coded Squelch and 60-watts out. It is currently priced under $200, making it an excellent value.

But this is not a new story. While there were some commercially made
converters and maybe a transmitter or two, up until almost thirty years
ago the only 220 equipment made for local, communicating type use
was the Gonset rig, and I gather it never sold very well.

Note that back then, US maufacturers were the source of equipment,
though there were rigs made in other countries that we in North
America rarely heard about.

In the late sixties or early seventies, Wayne Green proposed that
220 be turned into a hobby band, I can't remember if he intended
the whole band be used, or if it would be shared. His idea was that
CB was killed by hobby type use, and 220 sure wasn't being used.

Then a year or two later, the EIA (Electronic Industry Association)
in the US proposed that the 220MHz band be turned into a new CB
band, "Class E". The idea being that the higher frequency was
more conducive to local-only communication (at least with the
simple equipment that would be acceptable), and by moving to
FM there were good advantages (and they intended a similar
situation to the FM Marine Band, where some channels were set
aside for specific uses, and there were different categories
of channels).

Thus started the "220 - Use it or Lose it" movement.

Suddenly there were articles about getting on 220, when before they were rare. I think it was the December 1971 issue of QST, there was an article outlining various schemes to get onto 220, but not complete details. IN the months (and a few years) after there were articles in the various ham magazines that detailed many of those schemes.

There was a series in CQ a short while later about getting on 220. For receive, two methods were shown; adding a converter ahead of an existing FM receiver, or modifying the front end.

Someone went back and took a popular QST transistor 2M FM transmitter and converted it to 220, using the same circuit board if I recall.

And it went on.

It did not take all that long for commercially made FM transceivers for 220 to hit the market, including the Clegg that someone mentioned. SOme said at the time that the real reason commerical rigs appeared was that if the band was turned into Class E CB, the rigs could be sold to that market, though that doesn't quite make sense because the rigs all had only a few channels and I'm not sure how the specs matched those proposed for Class E.

I believe there was even one rig that also included AM, and included a tuneable receiver, maybe Henry Radio sold it.

I don't know where the Clegg was made, but by this time a lot of the ham equipment was coming from Japan, and it seems likely that much of the 220 equipment was made in Japan, even if the companies that sold it were US based.

In the end, there never was a Class E citizens band. The idea seemed to fade out; I sure don't remember when the idea dropped out of sight or when we were certain the band would not be lost.

Of course, it didn't look so great back then, and there was a lot of premature expectation of the new citizens band. Electronics Illustrated, which was about to die off, even ran an article for a GDO (grid dip oscillator) that covered 220MHz, for the reader who wanted to work on their own Class E equipment.

Some of the speculation back then about why 220 was underused was that propagation wasn't all that different from 144Mhz. Also 432 and even 1296 were multiples of 144, so one could easily get a transmitter on those bands by adding a tripler to an existing 2M transmitter, saving someone from having to build a complete new transmitter (and back then, most VHF transmitters, commercial and homebrew, started with a crystal in the 6 or 8MHz range, and multipled to 24, and then up from there so the transmitters were all similar up until the final stages).

Another reason was of course that there was little need for an additional band. The other bands weren't too crowded. You'd have people using

big rigs and big antennas for DX'ing, and then people who wanted local communication using their Gonset Communicators or similar low power AM transceivers. 50MHz had the advantage of allowing for DXing with those simple rigs when conditions were right. The licensing structure was such that for a long time, I cna't remember when it changed, but Technicians weren't allowed on 6 (and I recall that they weren't allowed below 220Mhz in the beginning) for a long time, and while the Novice license once carried voice privileges, it was only in a segment of the 2M band.

So the other bands supplied enough space, and there were reasons for choosing other bands first.

Once FM started becoming popular, not all that many years before the 220 threat, the bands, certainly 2M, did start having the appearance of being crowded. With everyone wanting to put a repeater on the air, and the move to channelized operation that FM brought, in some areas all the "channels" were filled up with repeaters, even if the repeaters weren't being used all the time.

So when the threat to 220 came, there was at least some sort of reason for moving there, if for no other reason than that there were empty channels to put more repaters on.

And the commerical rigs materialized. Perhaps transistors made it cheaper, maybe it was seen that it didn't take all that much effort to rework a 2M rig to work on 220, so some of the design effort and manufacturing cost was eliminated.

Activity for a long time on the band was limited by lack of interest. This meant there weren't commercial rigs, which meant the rest weren't interested even more. When the threat came, the band became important not so much for what it provided, but so it wouldn't be lost (and of course, there was always the possibility that hams might need the empty band at some time in the future). That provided an incentive to use the band, which brought the commercial rigs, which brought the rest to the band.

Once the threat had finally disappeared, things had changed. Most of the rigs were coming from Japan, and synthesizers and other features had become common. I get the impression people wanted those features, yet who would want spend the money on a rig for a band that is underused? There wsa a time when you'd have an HF transceiver and get on the VHF and UHF bands by building transmitting and receiving converters, but as commerical rigs became more popular, suddenly all-mode rigs were available for all the VHF bands. But again, who wants to spend the price of an HF rig on a nice and fancy rig for a band that is barely used?

220 has always been a chicken and the egg situation. If nobody uses it, the need for commerical equipment isn't there. But for most hams, they aren't interested in a band unless they can get commerical equipment for it.

Well, if the hourly labor rate and parts cost replacement adds up to
$240, do you expect SGC to lose money?

It's kind of like computers -- it's often cheaper to replace a
component than fix it.

> vechile.

If all you want is VHF/UHF them most of the dual band mobile units will
do good job for you. If want to do more than VHF then I would look at
something like the ICOM 706 which is all band/all mode.

As far as testing, I have wrote what I think is the best testing program
out. It learns from you and focuses on your weak areas. If you can
get 60% on my program then you should be able to pass the test. If you
are interested send me email and I will give you a pointer to it. It
isn't
finished yet (still needs General questions), but for Tech and Extra is
seems
to be working well. I am releasing it under GNU GPL license, which
means
it is free with source. I will post the URL info to the net once
I have a home for it and I get the General questions in.

Good luck

I'm wondering if it would be desirable, possible, legal, etc for
ham radio manufacturers to include FRS tx/rx in HT's. Most
70cm HT's can receive the FRS freqs already. I wouldn't think
adding transmission capability would be difficult at all - if it's
allowable under FCC rules. Anyone know?
>>

I know that the Yaseu VX-5R is able to do the 1/2 deviation on transmit &
recieve that is compatible w/ FRS.

I don't know that rig. But, regarding any "heritage" VHF equipment, I'd be concerned about its compatibility with present-day operating modes and stability requirements.

From the For-What-It's-Worth Dept., I "worked" a fellow
from 40 miles using our Kenwood FRS radios. I was on
the ground at 2300'; he was on a mountaintop at 8600'
IN SIGHT. The transmissions were VERY clear. I wonder
what the "absolute" range is of these things.

--- Deleted ---

Well, that was a really interesting article. And while I think it's
probably fairly correct, there was one issue that wasn't really
touched on, other than obliquely.

220 has always been perceived as an orphan. While it was
originally 5MHz wide, HAMs had secondary service there. Now
with the reduction to 3Mhz, HAMs are primary. But 220 is still
an orphan. It's not quite 440, but it's touchier than 2M to build
for. Losses are higher when things aren't right. And 440 is
just so big and open...

The problem is that in 99% of the country, everything above
2M is almost wide open. And even 2M is wide open a lot of
places. So if you were looking to do things, would you go to
the dead area, or would you go where there were people?

But what about those areas where 2m IS full up, and then 440
is full up, and yep, even 220 is probably full up. But the problem
is the bands fill up 2M first, then 440, then finally 220.

I used to live in Ft Worth, and back around 1982 there were
absolutlely no free repeater slots on 2M or 440. When we
looking into getting one there were 3 open on 220. We put
our ap in, and got one. There were no more left.

So, Michael is right, it's a chicken and egg. But it's
still an issue that 220 is 'last' to fill up.

Mike

Good for parts only (3) Motorola PT 200 Handie Talkie's portable radio's Missing Microphone, Bottom Battery Housing, and plug in whip antenna. That Right ItJust the Housing That containes the Transmitter & Receiver Asy. Item are on U.S. Gov Frequencies in the 160's and unknown frequencys, up. P33DEN-1100AMW ???, P33DEN-1100 A???, Microphone Type and a Unknown Tag is missing Telephone Handset type, Hand set is also missing. Unknown Frequency or Power Level! Item is good for parts only to fix existing equipment in service now, on those hard to find parts. One of the units dosent have original equipment knobs. Untested - Not working - Good for parts only. Tags state frequency on 2 units to be 163.5875, One Channel, Non PL. Again if your looking for a hard to find part this item may have salvage value to you. Again in the lot there a total of (3) sets, missing almost everything!

Hi, Michael,

Wow, thanks for the terrific synopsis of the history of 220 MHz. Your last paragraph summarizes what I think is the essence of the situation. Yes, as many have pointed out, the US market is probably much smaller than the worldwide market, but I can't believe that that would keep virtually *everybody* out of the 220 MHz rig-building-and-selling business.

See, here in southern California, 440 MHz has been completely allocated since the 1960s. Way back then, a (relatively) few remote base and repeater owners gobbled up all the available frequency pairs and they are still held on to, whether there is a viable, operational system on the air or not. If you ever make it to Los Angeles, bring your 440 MHz receiver and put it into continuous scan. You might hear ten squelch tails all day. But the band is impacted and folks who have the wherewithal and desire to put up an open machine, can't. There's no room. At least here in SoCal, it makes a heck of a lot of sense for the aspiring VHF owner/operator to look at 220 MHz. If it's as empty as everybody is saying it is, then presumably there is room for expansion there. But, anyway, this is taking the thread into a direction I really didn't want to go.

The law of supply and demand would dictate that, when demand is low, such as is the case with the 220 MHz market, price would *also be low*, which is not the case. I must be missing something here. I think the law folks meant to invoke was that of economies of scale.

Strange.

Are you on 220? What is it like now?

R,

Al W6LX

I have a TS 440A/T for Sale.

1. Comes with original Box & Stock filters, and an owners manual along with a
stack of Mod's enclosed for your use if, you want to do them.
2. Is in excellent shape. On a scale of of 1-10, this is a 9. It has a few
scratches on the face panel.
3. has the all transmit Mod, and the variable power Mod in SSB
4. I have a MC 80 mic, its a 9+
5. I have an SP 230 speaker with the filters and the original box, its a 8 on
the scale.
6. Have an MFJ 748J DSP with manual

If your interested I will sell the complete package for for $870.00 including Insurance & shipping in the continental USA. I will split the package up it your really interested, AS follows:
440= $625.00
MC 80= $75
DSP= $145.00
SP 230 $70

Even out here in the Midwest all the 2M pairs are gone and the 440 pairs are going fast. Almost anyone can do a UHF repeater now with the use of the Master II and the NHRC controllers. Heck I have 3 UHF's on here myself. BUT I do have a nice 220 repeater that was put on years ago by a couple of fellows that have since gotten out of ham radio. I bought the old repe3ater and ran it for a few years and now have replaced it with a HI-Pro repeater. There are only abt 10 220 users in the whole area BUT we do have a 220 rig at the local EOC and use 220 for passing sensitive info that we dont want everyone to hear. Although there are now scanners that receive the 220 band most do not and that is a plus. I for one love 220 for the nice quiet noise floor and lack of intermod. 220 forever!! LOL

just my opinion of course...

>be engineered to change its behavior on FRS versus 70cm.

The transmitter frequency tolerance is also tighter for FRS than
many amateur transceivers currently specify. But that could be
fixed easily enough - if a FRS transceiver that costs $30 retail
can meet the specs, so can a $300 ham transceiver.

Amateur transceivers often have power control circuitry built in,
so the 500 mW limit is no problem. Deviation reduction just
requires reducing audio signal level to the modulator - again easy.

But the antenna is the killer, I think. FRS radios are required
to have fixed, relatively inefficient antennas (or if you use a
more efficient antenna, the transmit power has to be reduced).
What ham is going to be happy with an HT that can't have another
"better" antenna attached?

Well, how much money are you talking about?

There really is very little reason to buy it, unless you want it
as a collector's item.

It is a very low power AM transmitter, and a superregenerative receiver.
It (and the Twoer for 2M) helped populate the band, but it never was
a great piece of equipment. It's good for local use (provided there
are locals using AM on Six meters). When conditions open up, the low
power transmitter may get you far, but superregen receivers are terribly
broad and that may not be useable.

I'm hazy about this, but I believe there were two models. The original
used a 50MHz overtone crystal for transmit, while the later "A" model
used the more commonly available 8 or 6 MHz crystals. If it's the
former, or I'm wrong about a model that used more available crystals,
then it will be harder to scrounge up a crystal and if you have to
buy a new one, it may be quite costly.

Source record: 79842

Hi Randy,

Very little real difference in HF performance between the 746 and 756, although someone will undoubtedly claim otherwise. The 756 has some extra goodies like a better band scope, separate receive input, etc., and the 746 has all-mode 2 meters. Either would be a good choice, depending on which features are most important to you. If you don't care at all about 2 meters go for the 756, if you want 2 meters then go for the 746. Pretty much that simple IMHO. You should be able to find a good used 746 for $1200-$1300, add another $100-$200 for the 756.

- Seth

Get licensed for GMRS and you can use 7 of the FRS channels with little
restriction as well as repeater and simplex pairs.

4859. TH-G71A power supply

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-08 00:00:00 UTC
From: gmasters@dotsplat.org
Message-ID: <3917945e@news2.starnetinc.com>
Source record: 79845
Cross-posted to: rec.radio.amateur.equipment,alt.ham-radio.vhf-uhf

I have a Kenwood TH-G71A HT that I use in the car. Kenwood sells two cables that can provide power while in the car; the PG-2W (hardwire), and PG-3J (cigarette lighter plug). Both of these plug into the same jack, on the HT, as the battery charger.

Is the battery pack being charged while operating the radio off of either of the above power cables? My concern is that I will shorten the life of the NiCd battery pack due to short charge cycles and/or over charging.

The charging instructions say to be sure the HT is powered off while charging, and that using the HT while charging will interfere with correct charging. Are these cautions based on the radio isolating the battery pack from charging when powered on, or are they due to the limited output current of the battery charger being unable to power the HT and charge the battery pack at the same time?

The instructions for connecting external power sources say nothing about the battery pack.

Sounds like you may be over-driving it, Mike, especially if KE6GUQ is getting good results with a similar amp. These 10M ;o) amps are designed for CB (4 watt, 12 SSB) inputs. Any more will distort/clip the top of the sine wave causing mucho harmonics, etc.

My family makes good use of FRS radios when we're travelling.
I'm wondering if it would be desirable, possible, legal, etc for
ham radio manufacturers to include FRS tx/rx in HT's. Most
70cm HT's can receive the FRS freqs already. I wouldn't think
adding transmission capability would be difficult at all - if it's
allowable under FCC rules. Anyone know?

Well there are restrictions to an FRS radio! 1. Power output is
limited.
2. FRS radios must have a fixed (non removable) antenna. So my guess
is even though this would be a nice feature for you, it isn't legal!

Jason Warren wrote:

Hmm, I'm not sure, but isn't that similar to the RS HTX-212? When ADI
went in on direction and RS went another with the HTX-242?

If that's the radio I think it is, it's pretty nice. HOWEVER, when I
looked
at it, everything was an option. Pay extra for Tone decode, pay
extra for CTCSS, pay extra for .... Where the HTX-242 had it
all built in.

To do so would cripple the HTs:

o Max power output of 0.5 watts
o Non-removable antenna
o Dev of half what is used on ham bands

I have owned this radio for 5 years. It seems that after approx. 2 hours of use the sensitivity (looking at the s meter, drops 2 to 5 s units). This is base to base, no power or antenna change on either end. The unit is fine cold, but when it warms up, sensitivity drops. Has any other 990 owner experienced this, & if so what caused this & what corrected it. Any info will be greatly appreciated.

I am not sure if I am able to see your point.

You list sources for stroke info. I am aware of what they can do from personal experience; although the results weren't as far reaching as yours were. My 2 were "pin strokes" and other than some loss of coordination to the left side of my body, I had full recovery.

If you are putting in a testimonial that code requires no brain, I will leave that to it's own merits; wherever you may find them.

If you can't think (no brain), and have difficulty reading and writing........

I am not sure if I am capable of grasping your point.

Are you able to use the code to communicate what you can't think, can't write and can't read?

If this is the case, I think a breakthrough has truly been made.

If we are going to get into a "who's is bigger" contest, count me out. I have no more interest in learning the code now than I did when I was much more able to do so than I am now. It may be possible for me to retain enough to pass the test, but as far as actual usage, it would be futile for me to attempt a QSO the following day. I respect the elders, and have enough personal pride and integrity not to "earn" something by foolery that I had not truly mastered. If it was my intent to become proficient in code, I would have been sure that I was able to copy and use code before testing; not just pass the minimum daily requirements for the sake of initiation. As I stated before, keep me out of the Who's Bigger mentality.

If you are now able to use Morse as your only link to communication with the outside world, as your post intimates, I am truly proud of you and happy for you. As far as it's relevance to my situation, I think you are barking up the wrong tree. I have plenty of other abilities to share with others and help to enrich their lives, and will try to use them fully as long as their gifts remain with me. Ham Radio is just a small portion of what I still find myself involved with and in. However, I may differ from others in that I would have done this without the existence of the concept of Morse Code, and it very existence is that far remote from what is important in my life as well as the lives of a large portion of those who will never enter the Amateur Radio service and help to keep it alive. The end result is that I don't think there is anything you or anyone else can say that will erase

that bit of reality form the current situation. I will continue to enjoy the hobby, and elmer newcomers as well as those wanting to learn some of the newer technology that I still have retained knowledge of, and will do so as long as I am able. By doing so, I am able to share some of the ability that I can still master. Something about "the ability to know the difference between the two" comes to mind here.......

73,

David

Using the 'remove me' option on the spam you receive is a great way to have
your name and email address show up on even MORE spam lists - your
responding to the spam confirms your email address as current and a good
'hit' for the spam punks to resell...

From: Don Snodgrass <donsno@gvtc.com>
Message-ID: <szTR4.488$jl6.12757@eagle.america.net>
Source record: 79562

Hello to the list..

I am just returning to ham radio after a three year absence and need
equipment to build my station.

I have been looking at a number of options including the Katchina PC and the
Tentec Pegasus PC based HF transceivers. I'd appreciate any thoughts from
the group on which you would consider the best choice between the two....or
perhaps neither one?

Thanks and best wishes,

Don

I am thinking of buying this radio and would like get some opinions on it. I know that kenwoods scan slow, but from what I hear kenwood makes a good product. Besides I don't much care about scan speed anyway.

All over the place. Try Radio Shack to start.

Or if you have I think the Que books on the sound blaster, there
was a simplex repeater on the companion CD that used the
LPT port to sense squelch and kick the PTT line. (That
program was also posted to CIS and I've seen it on a
number of BBS's. And the source is floating around. Only
down side is the code was DOS only (actually not bad) but
it was very "Creative Specific" and required the drivers
Creative shipped with the sound card. It wasn't generic.
I know, I wrote it.)

>Is this mod worthwhile? Any comments on performance increase.

I'd recommend you listen to a radio with a 2.1 filter before you do
anything. I have a 1.8 kHz ssb narrow filter, and the audio basically
sucks, compared to the normal wider 2.8 khz filter. Higher pitched,
less definition. The 2.1 filter will be a little wider, but you'd
probably be better off listening to such a critter first -- otherwise
you may be disappointed.

Hold on there Phil, what do you mean compatibility! Isn't AM, AM
and this is what the rig does. I think the SIXER is a great little
rig. The receiver is a bit wide but in the 60's you heard a lot of
them on the air. There is some 6 meter AM activity on 50.4, in fact
I worked a couple of stations in Michigan last week (50.4 AM). The
level of activity depends on where you live and the condition of the
band.

Don,

I own neither of these; I do however, have a TS-870 that I have briefly used under computer control, so let me offer this.

If you are anything like me, you will miss having knobs to turn. I know Kachina and maybe TenTec offer(s) an external knob at extra cost, so there obviously are others who feel as I do.

H-P recognized this at least 20 years ago. The HP9816, 9826, 9836 series computers that I used to program for test instrument control had a knob built into the keyboard.

Of course we didn't have "mice" then but seem to have come full circle. My Logitech mouse has a "wheel." If the software can use this as a knob maybe you're in. 'Course that will cut into the sale of $100+ knobs <g>.

Message-ID: <8f9a7g$97l$1@nnrp1.deja.com>
Source record: 79573

I'm looking for your comments on your favorite COMMUNICATION PROGRAMS for ICOM radios and PCs. I'm using a CI-V converter to the serial port. Hopefully the software will allow me to communicate frequencies and modes and maybe squelch settings to the PC. Going the other way, maybe the software will record frequencies to my logging software. I'm using LOG-EQ. It seems to work well on Windows and DOS platforms. Allowing KEYBOARD CONTROL of the radio is of primary concern. Do you know of any DOS programs that will accomplish this? They must be shareware, or freeware, or have demo's to try. Thanks, and 73's from Daveyjane.

I have seen many of these for sale here and when I ask people why they are selling almost all of them say that having to turn the computer on to listen to the radio is a bummer and a standalone rig is the way to go. Just my 2 cents worth....

4902. New Resource For Investors

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-09 00:00:00 UTC
From: meir@investmove.COM
Message-ID: <183666C3.O07GBX9P@investmove.com>
Source record: 79576

Hi,

I would like to introduce our new site and kindly request
that you add InvestMove.com <http://www.investmove.com>
to your Links/Resources page (or please forward this message
to the person who is responsible for maintaining your Web
site). This will provide your visitors with a very useful
and information packed resource. InvestMove.com allows
investors and analysts free access to vital stock market
information.

In recognition of its usefulness, InvestMove.com has been
awarded recently with the prestigious USA Today Hot Site award.

InvestMove.com features a unique tool that allows visitors to
enter a company symbol into a search form and obtain a customized
page covering more than 30 major information categories about
that specific company. The information includes: stock quotes,
stock performance, earnings estimates, stock valuation, company
performance, analyst opinions, broker reports, company profile,
and much much more.

Another feature of the site is an investor resources directory
that includes links to the best investment sites on the web.

Linking to InvestMove.com helps you to add value to your website
by presenting your visitors with a useful free investor resource.
Your visitors will find here all the tools and information needed
to make educated investment decisions, and it's all completely free.

In addition, links to relevant and popular sites are known to
increase a Web site's "popularity ranking" in some major search
engines. In other words, linking to http://www.investmove.com may
actually help increase your Web site's rank in certain search engines
that record this external link.

Thank you in advance

Meir Liraz,
InvestMove.Com

>never
>do this Mod as suggested by Yuri.
>
>73 de KE4WY Jim
>
>
>

Depends what you want from the radio. If you want just casual operating and rage chew, you don't need to modify filters, just put up with occasional problems of side signals splashing over.
For me as a contester (SSB & CW), selectivity and interference immunity is VERY important. This is why putting 2.1 kHz in both filter locations makes tremendous difference (don't need no HI-FI audio in the contest, on the contrary, "focused" audio with more power within the B/W is desired)
If one wants to have both configurations, just wire in relay switching filters and you got it both ways - HIFI audio and/or decent receiver.
By having Inrad filters is like going from Yugo to Cadillac, your choice.

Yuri, K3BU

May CQ has a review of this radio, as does QST. The CQ review says
"it scans lightning fast". If you get one, let me know if this is
true. I've pretty much made up my mind that I'll get one but it will
be about three months before I do.

I wold like to find the schematic diagram for the Kenwood TM-G707A.
If someone could scan it and email it to me, I'd be grateful. If it
exists on the web, I haven't been able to find it. Thanks.
John KC0ARV

Please remove the ".nospam" in my email address if replying via email.

Yea, I feel kinda the same way. Not to mention taking the rig portable
or mobile could be a pain. As far as the puter used, I guess an older
puter than was discarded could do the job unless these rigs need big
puterpower. I would think a 486 could do the job. I have a bunch of old
boxes that could be rebuilt. But for me, my radios will be stand alone
for the forseeable future. I'd rather have the normal rig, with the
option to add puter control, ala 870 etc. MK

Dunno, as I don't know much about that rig, but I would think the duty
cycle on FM would be appx the same as AM. 5-30 watts. Yep, more than
that would overheat the finals on long winded transmissions. MK

Hi,
I have a UHF Spectra A7 450-482MHz dash mount mobile for sale. The front face has no scratches and no wear on the buttons. This has the 12 buttons on the right. It has the mike, power cord and mounting bracket. I can program for you. It also has the RSSI option in it which is a relative signal strength reading on the
alphanumeric display. I will ship it for $475. Thanks, Bob

I have a TH-G71A that I have been running mobile for over a year using the PG-3J (cigarette lighter plug) and a NiMH battery pack. To date I have not had a problem. I also remember having read a post some time back about the question of the battery pack charging when the PG-3J was used. The answer was the battery is not connected when the HT is turned on and external power used. To charge the battery pack using external power the HT must be turned off.

Mark:
Are you looking for 12 VDC or 117 VAC? If 12 VDC go to your auto parts store, they have them that are auto reset with nice post lugs, and tabs for mounting. If you are looking for 117 VAC, you can use a breaker made for a panel box, but you will either have to mount it in a small panel box, or find a way to mount it. I am talking simular to square D or GE. Good luck.

The PayPal Item #6 above refers to using "mass messaging" to gather referral bonuses. The URL John posted is for information only. He will obtain no bonuses for anyone who joins via that link.

I think PayPal is great. At first I was very skeptical because I knew they had to be making money SOMEwhere. They are and they admit it. Most folks will leave some money in their PayPal accounts for awhile and PayPal makes money off the float. It is a good and ligitimate way for normal folks to be able to use credit card transactions amongst themselves.

You might subscribe to QST and go to the ARRL web site, where they
have QST reviews of equipment going back 20 years. Both the Katchina
and Pegasus were subjected to extensive QST reviews, and that might
tell you as much as you need to know. The reviews were positive, but
it's a different kinda deal to have your "transceiver" laid out on a
computer screen...

Source record: 79597

I have had mine for a couple of years now. I, too, noticed the front-end getting overloaded. However, my dual band Kenwood mobile has the same problem. They both have extended receive capability. My Radio Shack HTX-202 doesn't have the problem, but it has no extended receive and is not a dual band radio.

My only other complaint is that it doesn't have a mute function like the Kenwood mobile does. This helps if a there is activity on both bands simultaneously. On the W32A both will come in at the set volume and you have to turn down whichever one you don't want to hear to be able to copy the one you do want to hear. The Kenwood mobile has an optional mute function that automatically decreases the volume of the non-selected band to 10% of it set volume. This comes in handy.

I did quit a bit of research as to capability of the then available dual band HT's before I bought this one and it had the most bang for the buck I thought.

All in all I am happy with it.

Good luck.

Source record: 79604

Don't underrate what is possible with this little rig. I built one in
about 61. My first contact was Texas from NC using a halo antenna.
Obviously those were AM days and the band was less crowded during an
opening but a little power can go a long way and the receiver is
surprisingly sensitive. The selectivity certainly isn't up to modern
standards but, unless you have a nearby station, ought to allow for
making contacts.

4931. FA: ### RELM WHS-150 PORTABLE RADIO - 16ch, VHF

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-09 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <20000509193041.22333.00004149@ng-md1.aol.com>
Source record: 79605

For Sale: Relm WHS-150 Portable Radio - 16ch, VHF

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=328793177

The WHS-150 radio from RELM Communications is an incredibly small scanning two-way radio with enough big ideas to make you think twice before buying any other brand such as Motorola, Maxon, or Vertex. This synthesized, 16 channel scanning radio is the 5 Watt VHF version and the predecessor to the new MPV-32 radio. Its ergonomic shape makes it a very comfortable radio to hold and the die-cast covers provide unparalleled protection and durability. The radio's controls have been arranged to make it as easy to use as possible, while its liquid crystal display provides all the operational information you need. But probably the best feature of this radio is that it is user-programmable through the keypad! No programming software or cables are needed!!

Scanning, CTCSS, Full Function DTMF Keypad, Liquid Crystal Display, Battery Saver, Time Out Timer, Programmable Scan List, Priority Channel, Scan Delay, Busy Channel Lock Out, High/Low Power, Time out Timer, and more...
Comes Complete With: Antenna, 700mAH battery, wall charger, and belt clip.
Also comes with deluxe leather swivel case & strap (worth $50 alone!).
Model Number: WHS-150
Band: High VHF
Frequency Range: 148 - 174 (148 - 163 as Shipped)
Power Output: 5/1 watts (user selectable)
Number of Channels: 16 (can be upgraded to 32)
Size (H x W x D) (w/battery): 6.40" x 2.45" x 1.30"
Weight (w/battery): 15.5 oz. (.42 kg)

Get complete specs here: http://www.scannerworld.com/scnp54.htm

This radio is in excellent shape (9 out of 10 cosmetically). It's about 1 year old, and selling because it is not needed anymore. This package is worth over $400! Reserve is only half that! Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:

4932. Re: Kachina or Pegasus or ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-09 00:00:00 UTC
From: Richard Thorne <rthorne@tcac.net>
Message-ID: <3918A91B.7E0A1A49@tcac.net>
Source record: 79606

Hi Don:

I own a Kachina 505dsp and absolutely love it. I have never played with the Pegasus so I can't comment on it, but its a Ten Tec, so that should carry some weight.

I've owned several other regular rigs, i.e. TS-850, FT-1000mp ect. In my opinion knobs are over rated, HI. It took a little getting used to, but I've found it quite easy to tune the 505dsp using the arrow keys. (I do miss the knobs though).

I beleive, a lot of money is spent on the front panel of traditional rigs. The 505dsp doesn't have that expense. You can get a 505dsp with tuner for less than $2000 direct from the factory. The receiver is outstanding and is as good or better than the 1000mp I had. I don't have any technical facts to back that up, just my opinion. The other nice thing is that all the filters are built in and are standard with the 505. There is a 6khz filter all the way down to 100hz for cw, now thats tight. The noise reduction on cw is outstanding, especially on a band full of static like on 160 or 80.

Service after the sale is outstanding. I had a problem, sent the rig back to Kachina, and had it back within 3 days.

Upgrades to the radio are easily handled with pcmcia card updates v.s. having to buy new rigs.

I could go on, but bottom line, its a great rig. I run mine via remote control. You can see pictures of it at my web site. The url is below my signature line.

4934. Re: ICOM W32A?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-09 00:00:00 UTC
From: "Richard S. Lindzen" <rlindzen@mit.edu>
Message-ID: <righhsg5hg5q93ar8tbtbvt1opem8kouh2@4ax.com>
Source record: 79608

My experience with the W32A was that it was fine as a handy talky, but it was awful when one attached it to a better antenna and tried to use it as a mobile rig. Icom admitted this and said there was nothing that could be done. Apparently the W32A is optimized for its rubber ducky, and can readily overload with anything else.

I'm a high school student and I currently do not have the funds to purchase a 7 amp power supply (which the radio requires). Does anybody know if there is any way to reduce power on the Radio Shack HTX-10, such that it will use less than 3 amps at 12 volts?

Any assistance would be appreciated.

Hello Don, 2 cents from a non-owner? I have friends with each of these rigs. The consensus is the Ten-Tec has vastly superior transmit audio. I know one fellow who sold his Kachina after a short time for this reason, he got tired of getting bad audio reports. Another has had his Kachina back to the factory and the audio is still ragged. IMHO, after listening to a few of each and reading the specs., I would definitely go with the Pegasus. The owners I know just love the filtering and the DSP as a whole. They also state the receive audio is terrific. The Pegasus also has a lot of non-Ten-Tec software available and more is in the works. I honestly can not see the tremendous price difference in the two rigs.

As for having to use the computer to play radio, you can also watch TV, write e-mail, shop, watch your stocks, etc., while playing radio! Maybe the best of both worlds? I hope an opinion from a (I LOVE MY TEN-TEC OWNER) is of some help. My present TT is 22 years old. Time to upgrade? 73, Dave-KA4CNH

Hi All!

It seems to have a big handshacking problem between the computer and the new Kenwood TM-D700 over the serial link: impossible to send some files bigger than 3 Ko from any softwares to the TNC buffer (ASCII or binary file). Even the packet tones are affected and the TNC seems to be overloaded. Nothing stops the computer data flow control...

All infos concerning this problem will be gratefully received.
Regards, Olivier F5PYF.

Source record: 79618

Thanks everyone for the help on the simplex repeaters.
I have had several responses about the Radio Shack unit. Unfortunately the Radio Shack unit will not work
for my application. I am trying to help the "local" emergency services set up a simple repeater for SSTV.
In the SSTV unit (Kenwood VVC-H1) it takes 37 seconds to transfer a picture in the slow mode. The fast mode
is about 15 seconds. The problem is that not all portables will run the "fast" mode due to deviation. If you add
in time to ID then you need to record about 45-50 seconds. So I am looking for one that will record for 1 minute
to be on the safe side. Has any one modified the Radio Shack unit or built there own to extend the amount of time
it will record?

I have the Yaesu and I think it is the best choice due to its features, ease of use and it has fantastic audio! I often use it as my FM radio @ work! It has some very nice features such as the band scope, I.D. tags for your favorite memories, tons of memories (220 of them), 1100 MHA battery, only to name a few. The only draw-back is you have to use the correct antenna loading coil based on the band you are using: small coil for 2M & 70 cm and large coil for 6M and shortwave reception.They just screw on the end of the antenna.... no big deal, but you will have to keep them with you all the time! I spent a lot of time researching the HTs and I think you will find the same..... Yaseu! But what ever you choose, make sure it meets your minimun requirements. Have Fun!

Hello Everyone,

I am looking for QST magazines -- in decent shape -- from *at
the latest* the 1970's for a collection. I'm especially interested in
any issues prior to the 70's!

If you are looking to get rid of your box of QST's, I'll be
happy to reimburse for shipping and/or a reasonable cost for the
magazines.

Please email direct. Thanks!

73,
Brian, N5ZGT

Well a bit O' research would show that PayPal (recently merged with
X.Com) is hardly a 'noname web turd.'

--
'X.com Surpasses One Million Customer Mark'

"About X.com
X.com Corporation provides an instant and secure email payment
service, integrated with consumer and business financial services.
With a customer base of over one million, X.com is the largest
web-based payment network on the Internet, and the number-one payment
service for online auctions. X.com Corporation was founded in March
1999 by Elon Musk, who previously founded Internet media company Zip2,
which he sold last year for over $300 million to AltaVista, now a
division of CMGI. Bill Harris, formerly CEO of Intuit, joined X.com
last fall as CEO and President. Last month, X.com merged with
PayPal.com, the leading email payment service. PayPal.com CEO Peter
Thiel is now Executive Vice President of X.com Corporation."

http://www.x.com/news_million.htm

--

I'd suspect there are *lots* of folks out there who's ISP has their
credit card information and the average ISP may fall just a tad short
of a million customers.

I think it's a *GREAT service and have used it many times, sure makes
it *handy* for buyers and sellers.

Phil,

How do you control the input watts to the Palomar? The Mic Gain or do you use the sugested 2 o'clock position and the the Amp is driven fine? The HTX10 SSB is 25 watts out. I do not see an adjustment to set it lower unless it is the mic gain control

Thanks
Mike

Anyone ever seen the Icom 2710H dual bander mobile anywhere except the Icom web site? http://www.icomamerica.com/amateur/dualmobile/

It doesn't say that it's pending FCC approval, and it's not in any of Icom's ads but there it is on their web site.

Just curious if anyone knows what's going on with this one.

Jim

> anybody know if there is any way to reduce power on the Radio Shack
> HTX-10, such that it will use less than 3 amps at 12 volts?

A common approach with such requirements is to use a small battery
(gell cell) and then just use a small charger to keep the battery
filled. My home station uses this approach on a larger scale, with a
25AH Gell cell, and a 38 AH cell. Since I don't transmit a lot, a
small charger keeps the batteries full, and I have tons of current
when I need it. We also use this approach at the county emergency
ops center.

You probably need something about 6-8 AH, and about a 2-3A charger,
which you can build using an LM317 or similar regulator. Gells are
nice because all they need is a constant voltage.

Remember to install fuses. Gell cells will melt and ignite clip leads
more or less instantly....

Log-EQF ver 9 is available as a Demo from it's web site (search Log-EQF). It's biggest drawback is that it is a DOS program and I've had a very few occasions where it wont allow me to multi-task in Win95. If that's a problem, try LOGGER by Bob Furzer (Search LOGGER) which is a Win95 program and woks very well. It also has PSK32 built into it.

Jim,
Best Dual-Band Radio that I know of at this time had it for the last 2
years as my all around FM dual band.
With the "CAP-Mars" mod it is the most versitile radio that I have used
in the last 10 years... The only draw back is the lack of an Alpha
Numeric channel designators (I keep a large print cheat sheet on the
dash).

The only Grumble is that the mike is not part of the detachable front
faceplate, I guess you have to suffer sometimes.
At this time I still place it in the mobile in place of the IC-706 MKII-
G when I go into "RF Alley".

I am looking for a good dual band HT preferably an Alinco DJ-580
or DJ-582 HT. But I will consider other true dual band HT's (meaning those
that can RX both bands at once.... or within the same band on two freqs.)
such as the Yaesu FT-51R or Icom 32A or W32A or Yaesu FT-530, FT-470, etc..
If you have one for sale or know of one for sale please let me know. You
can contact me here or via. E-Mail at the address below (remove nospam FIRST!
and we can work out a deal... I will also be at Dayton Hamvention as of
friday May 19th, 20th, and 21st... so we can get together there also. I will
be looking for an HT there unless I have found one before then. Thanks...

Source record: 79764

I have a Kenwood TM-V7a dual band mobile for sale with the following accessories. The DFK-3c separation kit and the PG-4s radio to computer interface cable for programming the radios memories along with the software to do so.
The radio is in very good condition and works great. I have the original box along with the owners manual, mounting bracket and power cord. I am offering this radio for sale to people who live in the Twin Cities metro area of Minnesota. I don't want to go through the hassle of the post office plus the added benefit of seeing what you're buying up front. I will be able to hook the radio up in my car so that you'll be able to "Test-Drive" the rig.
The radio and accessories cost me just over $500.00 new. I'm selling these items for $275.00 Firm.
If you're interested, email me and we can setup a place to meet. I live near downtown Anoka and I will deliver.
My direct email address is kc0ewq@citilink.com

Jim,

Icom (through dealers) was closing the IC-2710H out at Dayton last year. My friend got one while we were there and I got mine a few weeks later at HamComm in Dallas. Both came from RT (now purchased by AES) and I doubt if there are too many more around at dealers new, but it never hurts to make some calls.

I've had Icom radios for years and this was really a flexable and well thought out product. The close out deal included an extra wireless, IR mic which I use because of its smaller size over the standard one. There's not much I dislike about the radio other than getting hit with paging IM when around TX sites or larger cities. I'm thinking of adding a Par filter ahead of the radio, which should take care of the problem. That is the price you pay for such a sensitive and wide band front end.

I would get another 2710 in a heartbeat and it goes well with my 706 in the car. I'd be interested to hear from anyone that has a better solution for the mixing / IM problem, especially on VHF.

I think he means the 8 pin octal accessory socket on the rear.
The mic plug is only 4- or 5-pins, IIRC.
I'm speaking from TS-520 experience...

Any ol' burned out 8-pin octal toob while suffice...

You know what they say about following up your own posts...

I contacted Kenwood technical support on the subject. Below is
their response:

| Dear Kenwood Customer:
|
| Thank you for your e-mail. Connected to either cable the battery
| is getting trickle charged (slow charge). Yes you may short the
| life of a battery if you charge it before its fully discharged.

I then replied with the question...

> That being the case, can the TH-G71A be operated safely with the
> battery pack removed? Or perhaps with an empty BT-11 installed to
> prevent shorting of the HT's battery terminals?

...to which they replied...

| Dear Kenwood Customer:
|

| Thank you for your e-mail. Both ideas will work just fine.....73

A Deja.com search revealed that this question has come up before,
and not been answered, at least not on Usenet. Hopefully this post
fixes that.

Thanks to Leo Fahmie, at Kenwood, for answering my questions.

You hit the nail on the head, Don. I've also owned a W-32A for 3-1/2 years, and overall its a great HT, but lack of mute function on Rx is a bit annoying. For what I do with an HT, I think the "one band at a time" units like the Icom T-7H would do fine.

5002. An Icom IC-706 Tune Trigger for as low as $1.19 (Some assembly required)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-11 00:00:00 UTC
From: wa2ehz@my-deja.com
Message-ID: <8feidb$4tt$1@nnrp1.deja.com>
Source record: 79650

An Icom IC-706 Tune Trigger for as low as $1.19 (Some assembly
required)

The ICOM IC-706 has a nifty feature built in to help the operator tune
the HF antenna SWR. By pushing the TUNE button on the front panel, the
radio switches to CW mode and transmits a 10 Watt carrier. This state
last for approximately 10 seconds or the operator can terminate sooner
by pushing the button again. This was designed to work with the Icom
automatic antenna tuners.

There have been a few circuits developed to fool the 706 into thinking
there is a Icom tuner attached and produce the same tuning signal which
can be used with a manual antenna tuner or many automatic tuners. One
is available commercially for about $35 and a new circuit appeared on
the Internet recently for home-brew.

Well, being the cheap guy I am, and being one to tinker, I felt there
had to be a simple way to do this. I began reading the various postings
on the Internet. I went back to an e-mail exchange I had with Ed, W1AAZ
in early April 1999 on Vartel's ICOM 706 Discussion Group. Ed explained
the functions of the TKEY and TSTR pins on the "AH-3" connector on the
706.

==========
e-mails:

RIG: ICOM 706 MKII
From: Ed, W1AAZ
Date: 04 Apr 1999
Time: 20:20:35

Every thing you need is available at the AH-3 connector and a couple of
dollars from Radio Shack.

< 0 0 0 0] <---- connector TKEY TSTR 13.8V GND

TSTR must be brought high (tells the IC706 that an antenna tuner is
connected). Pushing the TUNE button then pulses TSTR low which can clock
a flip flop (configured to toggle)that drives the TKEY line low
(transmits a 10W carrier for 20 seconds or terminated sooner by second
push of the TUNE button). You need just a few more parts to provide the
correct clocking level(positive pulse) and to set the flip flop on power
up (so it always
comes on in the correct state).

RIG: Icom 706
From: Ed, W1AAZ

Date: 13 Apr 1999
Time: 08:39:27

Comments

>It sounds like setting the TKEY line low puts >the transmitter into this "tune mode".

No.....pulling TSTR high is what puts the IC706 into "tune mode". Thereafter, bringing TKEY low keys the IC706.

>If this is true, can TKEY be brought low by just >connecting to GND through a push button switch?

Yes...but see above.

>Would it have the same effect?

Yes.....in a limited way (manual tune via an external push button switch).

>If this were to work, can it connect straight to GND or should it have a resistor in series?

No resistor needed in TKEY line.

==========
I got an idea, went about experimenting and was pleasantly surprised. I played around for about 2 hours to find component values I wanted and trying to make the system not work. It worked fine. It was simple, too simple. I could not sleep that night. I was kicking myself for not trying this a year sooner, remembering all those times driving the RV switching to AM, reducing the power, keying the PTT, tuning the antenna tuner, then resetting it all for SSB and keeping between the lines at 55 MPH.

Then, the next "natural" thought came to mind: "SELL IT". "For $3.00 worth of parts, I could under sell the competition by $10.00 and still make $20.00 per piece for a half-hour's work. But this design was too simple, what if some one opens the case and looks inside, boy would they feel ripped-off." I finally had to wake the wife so she could share in my sleeplessness. I told her my idea. She asked about patens. Then I thought "What if this is what is in the commercial unit? I would be violating his paten if I sell it. What would it cost to research? What about product liability?" At that point I decided to drop the marketing plan, besides how many customers could there be? Do I want to spend my summer evenings building, packaging and shipping?

A half-hour later I decided to go downstairs for milk and cookies and turned on the TV. There, just when I turned the TV on, was a commercial seeking inventions. I had to chuckle, my mind was made up. I am not into ham radio to make money. What if all discoveries were released only for profit, where would the hobby be? The hobby is supposed to be to share knowledge for further advancement. No, this is not going to

change the hobby the way PSK-31 from a PC sound card will, but it's the principle. Yes, there are lots of people in the publications and on the Net selling their wares, and that's great. I even had just ordered an add-on card to allow repeater splits to be programmed in the 706 (something Icom forgot in the first model). But this thing is too simple.

In order to assure nobody else makes money off of this, I have decided to post my findings on all of the news groups I can think of and e-mail various publications for printing if they choose. Of course, I assume no responsibility for any damage or consequences and there is no warranty. If you think this is worth while, enjoy. If you find a problem with the design, let me know and I will distribute to the same list that message uses. If you disagree with my opinions, that's your right, but I will not debate.

Well that was the price you had to pay for my 2 hours of experimentation, I got to be on my soap box. Like I said, this is simple. You can buy the Molex connector at Radio Shack (#274-0224) and any "Real Ham" will have the rest of the parts lying around on the floor. Use proper construction techniques, assure you have no shorts. How you want to package it is up to you. Use the above diagram of the connector as a reference. Connect TKEY to TSTR. Connect the negative (-) side of an electrolytic capacitor C and one side of resistor R to this connection. The positive (+) of C and the other side of R circuit is connected to +13.8V. That's all there is, a simple RC circuit between the TSTR/TKEY junction ant +13.8V!

Turn off the 706 and plug in the unit. Make sure you have some sort of load on the HF antenna connector. Turn on the 706, the radio sees TSTR is high during boot up and thinks there is a tuner connected. Push the TUNE button. The TUNE light should flash counting the seconds. Yes, you may interrupt the cycle by pressing TUNE again.

What is R and C? Well the higher the values, the longer the 706 stays in TUNE mode. The highest the R value I was able to use and still have the 706 think there is a tuner was 3.3 M-Ohms. I use a 1000 uF 16WV to get about 20 seconds of TUNE time, 440uF gives about 10 seconds. The values are not critical, but there are limits, so feel free to play using parts you have.

Two problems I found which I don't feel are "biggies": 1) If the 706 is allowed to finish the cycle, the TUNE light stays on - sometimes. This can be turn off if you hit the TUNE button soon after it finishes. If you wait too long, it will start a new cycle. 2) If you terminate the cycle early, to start a new cycle, you need to wait until the capacitor discharges or you can turn off the 706 and back on to reset.

How does it work? It becomes very obvious by re-reading the e-mail exchange above. The capacitor C just holds TKEY low while C discharges through R. In fact, if so desired, one can drive TKEY low externally to hold the TUNE state. This opens all kinds of possibilities for

automatic tuners that can sense the SWR. Low is below 2V according to my meter. Watching an analog voltmeter is very educational in this type of project. This is where you learn that if the cycle is terminated early by pushing the TUNE button, you cannot start a new cycle until TKEY is above 2.5V.

Thanks to Ed, W1AAZ for the explanation of the connector
If you have any comments, I'd love to hear them. Enjoy!

5004. IC-706MKIIG or FT-100 ??? Hmmm

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-11 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <391ade85.8590188@news.pacbell.net>
Source record: 79652

Hello NG,

I am just about to purchase either the Icom IC-706MKIIG
or the Yaesu FT-100 for use at home. I would like some comments
and opinions out there regarding both of these radios.
They are basically the same price, so that will not hinder
my descission.

What the FT-100 has over the Icom:

DTMF Mic. (I need this to access my repeater)
Better Noise Blanker
Easy to read cool blue display

Now for the Icom IC-706MKIIG:

Possibly a more sensitive receiver
It may reject frequencies better

That is all that I know. I did manage to use an Icom IC-706MKII, and
it was a really neat radio, but I really need the DTMF mic. Can anyone
help?? I think that Yaesu has finally stopped the major problems with
their FT-100. Or, maybe the FT-100 still has a major failure rate.

Please E-mail me with your comments and/or opinions.

radiotek@pacbell.net

Great multiband rig, 15 Watts output, currently has a 2 meter module in it and 2 70 cm. modules (430-440 & 440-450 Mhz.) Comes with a Yaesu MD-1 Microphone. The radio has the satellite module as well as the CTCSS endoder board.

Looks and condition-it rates an 8 easily. 10 meter and 6 meter modules are also made and are available for this all mode unit. FM, SSB, CW.

$550 firm. Have advertised it at a higher price in the past but can go no lower than this. Have recently purchased an Earth Station and no longer need the 726-R.

I have a mirage 10 watts in 80 watts out 2 meter amplifier with sideband capability, it is a bit used but looks pretty good and works even better $50.00

Also in my chest of stuff to sell, a Vibatrol 2 meter amplifier, 15 watts in, 60 out with sideband switch, it is in perfect mint condition and works fantastic. $50.00.

Lastly in my shack is an MFJ-969 Tuner/Inducter. Perfect mint condition, not a scratch on it, less than a year old. Has a cross needle meter, 300 watt capacity, works from 160 meter-6 meter. Built in 4:1 balun, has multi antenna switch with dummy load selection as well. Will let it go for $125(normally sells for $189).

I will pay all shipping with a 30 day money back guarrantee, no questions asked as long as they are returned in the same condition to me that I send them to you in.

Thanks for reading this post.

Zeb.... I have been using the AR-147+ in my shack now for a few months. I am basically happy with its performance. Here are my observations of this rig :

Pluses... 1. Not too difficult to program 2. 60 watts out on VHF 3. Easily modifiable (if that matters to you) the dreaded one-wire mod !!! 4. Nice backlit touch-tone mic 5. Very good audio/signal reports so far 6. Digital squelch feature is nice for ham and public safety stations using DCS (not many rigs this cheap offer this feature).

Minuses... 1. Function sequences a little clumsy to perform 2. S-meter is too generous....shows full-scale readings for almost everything it hears !! (My UHF 447 does this too) 3. Slow scan rate (I"m spoiled with my Yaesu FT-8100's scanning abilities).

Hope this helps you with your decision.

Albert Ewe <twewe@pc.jaring.my> wrote:
> I need instructions to channelized my VX1r.

If you're referring to storing simplex and repeater frequencies into memory channels, here's the procedure:

1. Make sure VX1 is in VFO mode (if you see a channel number in the upper right corner above the frequency display, press M/V to switch to VFO).

2. Tune a frequency you want to store.

3. Set any CTCSS tones, repeater offsets, and the power level you want to use on this frequency.

4. Hold the F/W button for one second - the F icon will blink in the lower left corner.

5. The next available (empty) channel will be automatically displayed, you can override this by turning the dial.

6. Once you've decided which channel to write the frequency to, press the F/W button again to store it.

7. Repeat the above steps to enter additional channels...

Once you've set the memory channels up the way you want them, press the M/V button to toggle from VFO to memory mode. Then use the UP and DWN buttons (not the dial) to move up and down through the stored channels.

Hope this helps. Feel free to e-mail me directly if you have further questions.

Source record: 79673

Hello all and thanks for reading this message. Dayton is just around the corner, and I am getting the itch to try out a different rig! For the longest time I have been wanting a Ft-990, but now I am seriously looking at the Ft-920, especially with all its features. All those fancy gadgets are nice but to me what makes the radio is the receiver. I would to hear from those who may own or owned these radios. Let me know your likes, dislikes etc., and especially how it performs in crowded band conditions , such as a major contest, dx pileup etc. I especially would like to hear form those who may have had both to describe the major differences between the two.

I am currently using a Ft-890, my operating habits are mostly chasing dx and rag chewing on phone. I also participate in the major contests. I do however occasionally work cw & rtty to work a "new one". Thanks for any and all reply's. 73 de Dale, N8PCN.

While I agree with Mark K I want to add that there is a "Power Down Control Switch" that is located under the top cover on the front left side of the radio. This is a slide switch and sets the power level to either 50 watts or 100 watts. This switch may be in the 50 watt position.
Russ, WA2GWV

Here is just the set up for running BIG watts to your beam. 150+ feet of RG-218 coax and a 300pf,10KV vac.vari.cap. set up to take the place of your gamma match.Will easly handle 10KW DC at 28mhz. Will work 14-30mhz. rice is $400.00 + shipping from 96003. I can be reached at (530)241-0843.

Take care,
Stan

5031. Linear Amp for TenTec Scout ?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-11 00:00:00 UTC
From: Kline Wilson <tennis@olypen.com>
Message-ID: <m%KS4.76791$MB.1572138@news6.giganews.com>
Source record: 79679

Anyone know of a good medium power amplifier that I can use with my TenTec Scout?

I want to use wall socket power (110v 60hz ac). 300w or so output would be fine, but must run from 50w drive. Also would really like to keep the good qsk features of the scout operational.

Hi Gang,

This "true" notebook PC (just a couple of pounds and only 1.5 inches high, closed) has a 16 shade VGA monochrome screen and can run on 12 VOLTS!!! It works well with DOS versions of APRS, PC-Pakratt, Log-Eqf and my Icom radio control program. It makes for a dandy Packet/Pactor station on Field Days. See it (and all the accessories) at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=330799362

Bidding starts at $9.99, thanks for looking!

Radio Randy

5036. ICOM 720A

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-11 00:00:00 UTC
From: radio40@my-deja.com
Message-ID: <8fd54qjog1@nnrp1.deja.com>
Source record: 79774

I recently received a 720A and I am having a bit of a problem with people telling me that it sounds as though the mic (Icom SM-5) is not driving the radio. I am told that the audio is "not strong"

I have played with the mic gain on the transceiver but to no improvement. Any help is appreciated. On 10 meters output is 70 watts is this low? 100 watts is spec but I usually take that as 160 meters = 100 watts and declining from there as you move toward 10 meters.

5039. Help: Icom IC-@sra

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-11 00:00:00 UTC
From: shale@north.nsis.com
Message-ID: <391a1af9.8632310@news.ng.nsis.com>
Source record: 79777

My 6 year old IC-2sra recently bit the dust. A few weeks back it lost all the memory channels. Last week it would work only when the rig was in the rapid charger. The batteries are fully charged and work for hours on a similar unit. This week the rig is completely dead. Before I send it into the shop I was wondering if anyone with this model has experienced the same problem and could suggest a repair. Thanks for your time. Scott VE1AFN. >>

5040. FT920 recording CW problems...

Hi Tony, which after market antenna do you recommend for the VX-5R? Great radio beats carrying my Motorola MT2000 during the summer, can put this in my shirt pocket. Thanks for any ideas on a antenna.

The power spread on solid state usually isn't too great from 160 to 10m. Many of the older icoms have this problem to an extent. If you can call it a problem. On my 730, the average power output with the processor off is pretty low. I get much better drive if I use the processor. And I do use it ALL of the time. I just keep my drive fairly low, to keep a decent audio quality. How are you testing output? With a carrier or voice peaks on a peak reading meter? Many peak reading meters can't keep up with all the voice peaks even though though are called peak reading, and it would be common to see a lower output even though you might really be doing a full 100w. Is the SM-5 the correct mike for the 720A? I dunno myself..Almost all older icom mikes have built in preamps. I doubt you would be having a problem there, but I'd be aware of the preamp. A test to see if the mike is capable of fully driving the rig can be made by talking into the mike, saying x-ray over and over, while adjusting the mike gain to a point where the meter peaks go no higher on a normal voice peak. You should saturate at a certain point to where adding more gain doesn't add to the peaks.On a normal operating radio, this is usually designed to be appx halfway on the gain control to have leeway either way. Of course, if the mike output is weak, it may be possible to adjust the gain, and go all the way up, and still not see a leveling off. Too hot, and you will level off at too low a setting. So #1, I'd try that test to see how your mike is driving the rig, and if you can go all the way up and not level off, try running the processor, and adjust the mike gain the same way. If you can't level off the peaks below full drive setting then, you have a problem somewhere. To check power on each band to check alignment, I'd use CW to test. Much more accurate than voice. You should be near 100w on each band. A little less could be ok, even down to 80 watts ot so, but 70 getting a bit low. If thats the case on CW, the radio likely could use an alignment. One thing to note, you would be hard pressed to tell the difference between 70w and 100w on the air. For that reason, I don't sweat it if a band is a bit low. Say 10-20 watts less than the others. MK

5059. make money

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-12 00:00:00 UTC
From: 4Roses@Access1.NET
Message-ID: <391B4C0C.419DAEBB@Access1.Net>
Source record: 79683

Make $1000 of an initial $6 investment very easy, not a scam, really works!

Make Money Now! It doesn't get any easier than this. Just follow this awesome money making program, and you'll be collecting a nice supplemental income in no time. You don't have to buy anything! You don't have to sell anything! This is not a Paid To Surf Program or a Paid to Click Program. You don't have to surf the Internet for a ton of hours or click on little banners a million times. This program is fast, simple, easy, and most importantly....IT WORKS!

Mission: To make a one time investment of $6.00 and have it return to you over $6,000.00

The program really works! Read this testimonial first!
A little while back, I was browsing through newsgroups and websites, just like you are now, and came across an article similar to this. It said that you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, "Yeah right, this must be a total scam." But like you and me, i was curious, so i kept reading. Anyways it said that you send $1.00 to each of the 6 names and addresses stated in the article. After you send the mail, you then place your own name and address in the the bottom of the mailing list and post the article in at least 200 newsgroups. No catch, that was it. So after thinking it over and talking to a few people about it, I figured, "what have I got to lose other than $6.00 and a few stamps?" So I decided to try it and I mailed out my measly 6 bucks. Well Guess What?! Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. Mail after mail with a 1 dollar bill inside. In the first week, I made $25.00 - Wow, I already made back my initial investment with some extra lunch money. But next week came more mail. By the end of the second week, I had made over $100! In the third week, I had over $1200.00 and it was still growing. By the end of the 4th week, I had well over $6,000.00! I couldn't believe it. It was certainly worth $6.00 and 6 stamps. And the best thing - it's perfectly legal! Thanks a bunch to everyone involved!

Important: This is not a rip-off; it is not indecent; it is not illegal; and it is 99% no risk - it really works!
Please note: Please follow the directions EXACTLY, and $6,000.00 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions.
You will now become part of the Mail Order business. In this business

your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you asking to be included in that list.
4 Basic Steps to Success
STEP 1 : Get 6 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Write on each piece of paper your mailing address and your email address. Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase with
your house and email address. What you are doing is creating a service. THIS IS ABSOLUTELY
LEGAL! You are requesting a legitimate service and you are paying for it! Any doubts? Please refer
to Title 18 Section 1302 & 1341 of the Postal lottery laws or call the US Postal office at 1-8000-725-2161.
STEP 2 : Mail the 6 envelopes to the following addresses:

1) Christopher L. Sloan
2200 Hickory St.
H.S.U. Box #14579
Abilene, TX 79698

2) Karen Lohning
155 Blue Spruce Ct.
Delaware, Ohio 43015

3) B. Stoltenberg
7149 Wynter Way
Indianapolis, IN 46250

4)J. Hanan
10871 Poyntell Cir.
San Diego, CA, 92131

5)Rob Barnes
14575 Spingvale st.
Poway, CA, 9206465t

6)Eric Larose
17757 Corazon Pl.
San Diego, CA, 92127

STEP 3 : Now copy this list and take the #1 name off the list that you see above and move the other names
up (6 becomes 5, 5 becomes 4, etc...) and add YOUR name as #6 on the list.
STEP 4 : Change anything you need to, but try to keep this article as

close to the original as possible. Now try to post your amended article to at least 200 newsgroups (chat rooms, message boards, guest books, bulletin boards...u know). You don't have to post 200, you can do more or less, but remember, THE MORE YOU POST, THE MORE CASH YOU MAKE! Keep a copy of these steps for yourself, and whenever you need cash, you can use it again, and again.
PLEASE REMEMBER : This program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Loook at it this way. If you are a person of integrity, the program will continue and the CASH that so many others have received will come your way.
NOTE : You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes peple send you. This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft. So, as each post is downloaded or read, and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousand of dollars!! What an opportunity for only a one time investment of of $6.00 and six stamps. Send it now, add your own name to the list, post it, and you're in business!
To make sure you don't get into trouble with Uncle Sam, make sure you declare your extra income. Remember, this is LEGAL> You are using the Internet to advertise your business. What is that business? You are creating a mailing list of people who are interested in home based computer and online business and methods of generating income at home. Remember, people send you a small fee to be addesd to your mailing list. It is legal. What you do with your list of names is up to you. so build your mailing list, keep good accounts, declare your income and pay your taxes. By doing this you prove your business intentions.
How Much Can I Really Make?
Out of 200 postings (which should take no more than 1 hour) you receive only 7 replies (a very low percentage). So then you just made $7.00 with your name at #6 on the letter. Now each of the 7 people make around 200 postings with your name at #5 and 7 more people respond, you just made $49.00. Now those 49 people put up another 200 posts each, and still only 7 more reply from each person, you just made $343.00 with your name at #4. Following the same pattern, you would make $2401.00 with your name at #3, $16,807.00 at #2, and $117,649.00 at #1. And remember, that's only if 7 people reply each time!
Additional NOTES :
1) In some countries, the export of the country's exchange is illegal. But you can get the license to do this from the post office, explaining the above statements (that you have an online busines, etc.). You may have to pay an extra tax, but that's OK, the amount of the incoming CASH is HUGE!!
2) You may want to buy mailing and email lists for future CASH, or

database of spreadsheet software.
3) You may eventually want to rent a P.O. Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. Just make sure all the addresses are correct.
4) If you're really not sure or still think this can't be for real, please print a copy of this article and give it to someone who really needs the CASH, and see what happens.
5) For a business to be successful, be honest and fair.

There are many that would fit the bill. Guess depends how much money you want to spend. An SB-200 or a Fl-2100 would be a good match. And fairly reasonable on the used market. New, you will spend three or four times the money, so I would want to get something good if I went that route. Maybe a single 3-500Z amp. An 811 amp would be ok also, but the ones I see for sale new seem overpriced and they run the tubes too hard if run to the limit. To spend that much money for a new one, I'd much rather spend a tad more and get a single 3-500z. Much better amp later on if you run full power. Or maybe solid state. Actually, that might be a good way to go. No tuning, or high voltage etc. Also the older tube amps likely won't do QSK unless you modify them a bit. But this can be done if you really want it. It's funny, I run alot of CW, and at high speeds also, but I hate QSK.
Dunno why, but I think it's the constant "clatter" of the on off receiver noise etc. I much prefer a delay. Even at 40-50 wpm or so. When I use an amp for cw, I use a foot switch. Actually, I do for fone also.

The 2600 is the best intermod fighter here if that is a problem for you.
You left out the IC 2100 which has the most features of all, tuneable
attenuation for good intermod control, the most rugged and scans at 8 ch/sec
which is probably fastest of the three. Now at $180 too.

Message-ID: <391c0001$3$vtanpl$mr2ice@news.uga.edu>
Source record: 79697

You can buy an MFJ or Ten-Tec 500W solid state amplifier. They have gain of at least 10 db. If the gain is inadequate, it can be increased by removing teh input attenuator.

5074. Re: how is the ic 706 mkII in rx on the low bands?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-12 00:00:00 UTC
From: ignacy@num.ads.uga.edu
Message-ID: <391c0182$4$vtanpl$mr2ice@news.uga.edu>
Source record: 79698

I checked FT-100 against TS-850 on 40 and 30m, the toughest bands here.
For clear signals, I had to turn off the preamp on TS-850 and turn off
preamp and turn on attentuation on FT-100. According to QST reviews,
FT-100 handles strong signals better than 706MK2G.

Part of the problem is that RX bandpass filters in FT-100 or 706 are fewer
and wider because of lack of space. Also, both mobile rigs are only two
IF, and shows some blowby, which is hard to avoid at 9-10 MHz with
diode-switched filters.

Source record: 79704

Popular logging product gets many new improvements

Muscle Shoals, Alabama. May 12, 2000: Creative Services Software announced that the version 3.07 of the popular logging program, Log Windows has been released. Log Windows version 3.07 is the first major functional upgrade for the product in almost two years. In January 2000, CSS started developing, selling and supporting the product and did a minor update for release 3.06.50.

Log Windows 3.07 includes the following new features:
- Telnet DX Cluster Access
- Support for new radios, including the IC-756 and the TenTec Pegasus (direct support)
- New logging mode options
- IOTA Support
- WinQSL QSL Manager Support
- QSLMaker 2.3 QSL Printing Program Support
- Full ADIF support

The product retails for $69.95 and upgrades from release 3.06.15 or earlier are $40.00. Those who have purchased version 3.06.50 will get this upgrade free. It also appears on the Digital Trio CD .
Log Windows is owned by SCO, Inc and is maintained by Creative Services Software.

Creative Services Software is at http://www.cssincorp.com
The Log Windows homepage is at http://www.logwindows.com
SCO, Inc is on the web at http://sco.home.mindspring.com/lw.html

Windows, Windows 95, Windows 98 and Windows NT are Registered Trademarks of Microsoft Corporation.

If you're a Hamvention vendor who plans on selling QRP equipment please
contact me at KI8IK@arrl.net. I'm compiling a list of QRP vendors for
subscribers of the QRP-L reflector. This will help them easily locate
you among the thousands of sellers in attendance.

Items of interest include:

Used QRP gear.
CW keys and keyers.
Portable HF antennas.
QRP books.
Gell cells/chargers/solar cells.
Workbench supplies/soldering stations.
Parts for homebrew (transistors, var caps, PCB stock)
Crystals near QRP frequencies.

Please pass along:
1. Call or Business name.
2. Hamvention space #.
3. Description of items.

Hi Folks:

I've been licenced for 23 years, currently VE7ZD, and am in graduate school up here near Vancouver, BC.

I'm researching amateur radio and its history. I'm specifically interested in inventions, discoveries, or techniques that were developed within amateur radio and later spread to the electronics industry. Similarly, some of our operating techniques and procedures were later widely adopted by other services.

Hams operate outside of the structured environments within industry, and I think that this freedom has permitted us to invent and discover without being shackled by any policy issues, or possible stigmatism from investigating things that would be considered "too far out in left field" by management and non-ham co-workers.

Examples would be the investigation of wavelengths below 200 meters, with the discovery by hams that such wavelengths were better for propagation than longer waves; packet radio; APRS; propagation studies that were undertaken in the 20s and 30s; facsimile; SSTV; and network operating techniques.

Some of this stuff was regulated, such as the banishment of amateur radio to the "useless" wavelengths < 200 M, but this sort of proves my point. There's been lots of innovation within the hobby, and the general public now benefits from it.

If anyone could provide me with more examples, or good books or articles on this topic, then that'd be great. Of course I'll give appropriate credit to those who assist!

If you could email me as well as posting your reply, thanks. There's lots of traffic in these groups and I don't want to miss any replies.

73,

Kevin VE7ZD

Body handling: HTML body converted to readable text

I've owned a VX5 for about a year now, and compared to most others I find it to be a very remarkable little piece of equipment. The inconveniences that others have with their HT's (like: I can't get that freq. on this one, or I don't have digital tones) make me happy that I spent the bucks.

However I find the thing just a bit ergonomically challenging. In brief, it toooo little. I had a lot of difficulty at a drill last month. I find it awkward to operate just BECAUSE it is so small.Which is of course one of its major benefits also. For a radio that is with me all day it is perfect. However under continual/heavy use situations like emergencies or drills I'd like a more easy to handle unit. Although I'd not like to give up all those features.

Can anyone identify what kind of tube this is & what it was used for?

It's marked "JAN-CIM-15E", & carries the "Eimac" brand. Markings
(ratings?) stamped on one side of the box read:

Ep = 1000 v

Ip = 0.5 ma

Eg = "46" is written in pencil here

"Peak a - 46" is also written in pencil at the top of all these
markings.

I have posted pictures of the tube & box at:

http://members.xoom.com/_XMCM/studio_tech/tube.html

I am guessing that this is some kind of transmitter tube.
I have a number of these NIB. Are these only good for
target practice?! (I found them at a garage sale).

Thanks,

Mr. Wires (post here or delete "NOSPAM" to e-mail)

Packet radio already existed. Somebody (I can't remember his position
or whether he was a ham) in what was then the Department
of Communications here in Canada, with a name like deMercado, had had
some experience with Aloha Net in Hawaii. He decided it was time
for hams to move forward, and so he changed the rules in Canada to
allow packet radio, and introduced the Digital License. That license
carried no code test, but what was said to be a more complicated
theory test, and was VHF only, maybe restricted to certain bands. I
thought there was also a segement or two set aside for packet that
only Digital License holders could use. I remember he came and talked
to one of the local clubs in 1977 or 78, so long ago that the details
are vague.

So it's debatable how much ham radio influenced packet radio. On
the other hand, I don't dismiss the value to some individuals, who
got it going in ham radio and played with it, and used that
experience in the commericial area.

I think the influence of ham radio on technology in recent years has diminished. That's less important than whether it is still affecting the young, getting them interested in electronics and radio at a young age and providing them with a place to play with these things.

But up till a certain point, ham radio was basically synonomous with electronics and or radio. You don't have to go any further than Howard Armstrong, who was a ham first and it could be said his work was nothing more than an extension of ham radio, even if it influenced radio tremendously; regeneration (and regenerative receivers) the superheterodyne receiver, the superregenerative receiver and practical FM. You can't do anything in radio without one or more of those things.

A lot of the oscillator circuits are named after people who happened to be hams.

I thought practical narrow band FM for two way communication came from a ham, something like the guy who started Sonar, but that is based on some remembrance.

Amateur satellites certainly must have helped the field. The first OSCAR went up only a few years after Sputnik and must have cost significantly less. The concept of a piggyback launch came from OSCAR, and certainly others have taken advantage of that. There have in recent years been "OSCAR-type" satellites, ie relativley simple and inexpensive, which have probably been mainly experimental but have either helped provide a training ground for satellite work or helped "third world countries" in some way.

And you can find examples of hams supplying practical experience (gained from the hobby) in some of the important projects of the last century. I can't get to it easily, but I read a book about Benchley Park during World War II where they worked on what the other side was doing, and the author mentions right at the end the importance of hams in the practical experience they brought to the process. I think there was a similar mention in a book about radar development during WWII. People would come out of the universites, and know all the theory, but be lost when it came to practical work, but hams had that down because of building their own equipment. And of course when WWII started up, hams ended up filling various technical roles in the armed services.

I thought the first person to play with radio astronomy was a ham. If it was't someone who followed up was.

The US Army tried moonbounce in the forties or fifties, but they needed big arrays and lots of power. Hams followed, using much simpler equipment. I'm not so certain moonbounce has much practical use for society other than hams, since others can put up satellites while hams are somewhat limited, but the process of advancing the art may be as important as whether the technology actually migrates elsewhere.

A lot of the history has been written. The ARRL had or has some books on the history, including that one about "200 meters and down...". "Empire of the Air" by Tom Lewis (and it was a Ken Burns PBS show some years back) dealt with Armstrong, Sarnoff and DeForest and probably is fairly available. There was a book about Armstrong, I can't find my copy right now, first published in the fifties and then in the sixties by Bantam Paperback, that I've found in used book stores that provides good, though not too technical, coverage of his life.

Since you can now get QST easily on CDROM, it would be worth getting the early years, actually get the whole set if you've got the money, and then you can see the history unfolding as it happened. The other ham magazines may not be as useful, since they came later, and more important they aren't as available so cheaply or conveniently.

Once you have the ham history, then you can start exploring where it fits into the rest of electronic/radio history. Whether it was simply implementing something discovered elsewhere, or had impact on society beyond ham radio.

And you might want to dig up an article by John W. Campbell (yes the legendary editor of Astounding/Analog SF magazine) who was a ham and once upon a time wrote some technical articles for CQ. He once wrote an article about "How to be an Amateur" pointing out some of the benefits hams have to innovate for the simple reason that they aren't bound by corporations. I think it was published in an early issue of 73, and then reprinted once or twice. 1971 comes to mind.

Hi Gang,

Well, after recovering from a computer crash of epic proportion I am able to repost the following:

I have for sale several sections of Andrew hardline coax. All used sections were installed and removed by a professional tower crew. All ends have been sealed. All are in good shape. Prices are per linear foot. I will consider discounts if several sections are purchased at once. Get your buddies together and save some money. Here is a list:

60' 1 5/8" $2.00
125' 1 5/8" $3.00
150' 1 5/8" $3.00
215' 1 5/8" $3.00
100' 1 5/8" $2.00
100' 1 5/8" $2.00
100' 1 5/8" $2.00
125' 1 5/8" $2.00
125' 1 5/8" NEW!! $5.00
140' 1 5/8" $2.00
215' 1 5/8" $3.00
45' 7/8" $2.00
35' 1/2" $1.00
40' 1/2" $1.00

All items are pick up in central Iowa. Shipping can be arranged at the buyer's expense. Yellow Freight will ship to almost anywhere. You can reach me at 515-243-5293 or of course email is OK. I apologize to those who may have emailed me and received no response. Thanks and 73,

Alan

Do not send that radio anywhere except to the
ICOM GURU, Scott Malcom at MTS .
He worked at Icom for 20 years and has all the old parts.
You send the radio to him and he will tell you what is wrong with it and
if you do not want it fixed he will send it back no charge on the
trouble-shooting.

If he fixes the radio, he will send it back to you with a bill enclosed.
If you are satisfied with the work , then you send him the money for the
repair.
His address:

Malcom Technical Support
3617 Deep Lake Boundary Road
Colville, WA 99114

Phone: 509-732-8884

Email: mts@plix.com

Tell him that K5JOE in Little Rock, AR sent you....:-)
You will never send a radio anywhere else to be repaired.
73

> Hey Kenwood... Make up your mind!!! This is the reply I got from kenwood:
>

My posting of the answer Kenwood gave me lead to an e-mail exchange between another TH-G71A owner and my self. In the exchange he referred to the answer you had received from Kenwood (or a similar answer someone had received).

Left with two conflicting answers I decided to perform a simple test:

1) With the HT powered off, remove the battery pack, attach an external power source (BC-17 wall charger), and measure the voltage at the battery contacts on the back of the HT. The measured voltage was 13.5 VDC.

2) Next, turn the HT on and re-measure the voltage at the battery contacts on the back of the HT. The measured voltage was 13.3 VDC.

From this I concluded that the answer I received from Kenwood is correct for the HT that I own. For all I know both answers may be correct, based on the date of manufacture and design changes over time.

I plan to buy a BT-11 when I buy the PG-3J. When using the PG-3J I will remove the NiCd pack and attach the *empty* BT-11. This should prevent shorting the HT's battery contacts, and keep things away from the heat sink.

At first I was irritated that Kenwood hadn't designed the HT to isolate the battery pack when operating from external power, but, I really like the little rig, don't get intermod, am happy with the battery life, etc. So I got over it pretty quick. ;-)

Did you adjust the local oscillator on your ham radio to meet FRS
frequency tolerances? All FRS radios, no matter how cheap, have to
meet tolerances better than most ham HTs are specified for.

Once you've adjusted it, will your HT remain within tolerance over the
frequency range?

Have you adjusted the deviation for FRS (FRS uses half the deviation
of normal amateur FM)?

If you've done these, then you can legitimately say that there is no
technical difference between the signal transmitted by your HT and
by a real FRS radio. Have you?

Dave

The way I see it, you may as well just be a CB'er. There, you won't
be hassled by rules and those who feel you should follow them. The
difference between a licensed ham and a CB'er is that as a ham, we
follow the rules even though we may not always agree with them. The
honest thing to do would just be to buy yourself a pair of FRS radios.

No, it converts the 6 meter band to the 40 meter region, around 7
megacycles, as we called 'em in those days.

I built one of these little converter kits back when I was in high
school, in the late 50s, and it worked fine. I used it with a surplus
ARC 5 receiver that tuned 7-10 megacycles.

The Ameco kit cost about $19.95, as I recall, in those days.

I would if they made CBs as small as FRS radios and they didn't eat batteries. But again, I'd want an HF portable that would do ham and CB. Why? Because there's no technical reason why the device shouldn't exist. Plus I'd want the cool transponder feature in the Kenwood and Icom FRS radios. I think that is really neat.

But I still have to believe that the sentiment I see in this group is most certainly in the minority. Why does nearly every ham radio manufacturer include such capabilities and provide such an incredibly easy way to access them? If Kenwood didn't want my TH78A (note the A) to be able to transmit outside of the 70cm band they very easily could have built the radio that way. I do software and I do circuits and it would be SO trivial to include blocks in the user interface that would prohibit anything out of spec.

In fact, these manufacturers go out of their way to design radios that are easy to modify. If THEY go to all the trouble to give ME functionality, it behooves me to use it.

I follow rules that make sense. I'm not convinced that using ham gear on FRS has any impact on ANYONE except in the way that it benefits me.

John

FCC type acceptance rules DO make sense, clearly there have to be prescribed technical standards to ensure that transmitting equipment will operate without interference to other users. Amateur radio equipment is required to meet a lower standard than commercial equipment, reflecting the nature of amateur radio operations (and helps to keep equipment prices lower).

To operate on FRS with 12.5 kc channel spacing there are requirements for frequency stability, modulation limits, etc. that may not be designed into a particular piece of amateur gear. The amateur equipment _might_ be capable of operating on FRS without interference, or it may not, since it was neither designed nor tested for this purpose. This is what type acceptance tests are for. Have you tested your TH78A to the entire suite of type acceptance standards required of an FRS radio? Do you even know for sure whether it meets even some of the more basic specs required for operation in this band? Do you have the test equipment to confirm this? I'm not saying that it would be proper to use the radio even if you did, but just wondering...

- Seth

Need a 6AL5 and a 12AU7 to finish restoring a Johnson Viking. Would like Dallas area but would pay for shipping if tube prices are reasonable. I added that' cause from what I've read, the prices are going out of sight and it wasn't too long ago that I had to give away 3 large bin boxes full. thinking I would never need them again!) FS: Racal RA6217E shortwave receiver (same a "A" version with two extra options). Is in good condition with nice front panel, has selectivity of 200hz, 1khz, 3khz, and 13 khz. Coverage is 980khz to 30mhz continuous. "E" version has a preselector. For details see page 336 of Fred Osterman's book "Shortwave Receivers Past and Present". Price is $775, trades considered.....Mike.

Hi all;

Looking for both/either Drake MS-4 Speaker and Drake AC-4 power
supply.

Power supply must be operational, cosmetics not very important.

Speaker must have proper Drake decal on front, and not be dented.
Otherwise I'm flexible.

Please contact:

Neil, N1DMA
NeilR@innermedia.com

or call toll free: 800-962-2949

Thanks!!!

Source record: 79503

> It's probably better to actually get an FRS radio, for various
> reasons, but it is nice to know that you can interact with them
> properly if necessary, since they are beginning to get more common.

The one reason why I don't want to buy an FRS radio is the battiers. HTs are so great about having built-in high-capacity DURABLE batteries. The TalkAbout 280 is the only NiHM FRS radio I know about and it costs $125.

My feeling is that if I have to pay $125, I might as well pay $150-$200 and get a 70cm HT (Alinco, Icom, Kenwood, etc) with no frills, but that can be modified to do FRS and GMRS. THE benefit here is that I can get a drop in charger so I can use it just like my cell phone. No popping batteries in and out just put it in the charger and leave it there when I am at home. This is the ONLY way my wife will use FRS. She won't pop batteries in and old or remember to charge them at all.

John

5161. Help with MFJ-1278 and Kenwood TMV7

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-13 00:00:00 UTC
From: Pedro Braz <pqp@netcabo.pt>
Message-ID: <8fjfpkjfu6@duke.telepac.pt>
Source record: 79505

Hello,

I have a MFJ-1278 and a Kenwood TM-V7 and need to connect them both.

The MFJ 1278 Pin out is as follows:

PIN 1 - MIC. AUDIO
PIN 2 - GND
PIN 3 - PTT
PIN 4 - REC. AUDIO
PIN 5 - SQUELCH INPUT

The TMV7 Pin out is as follows:

PIN 1 - Packet data input(PKD) (TX data from TNC to transceiver)
PIN 2 - GND for PKD
PIN 3 - Packet Standy - TNC can use this pin to inhibt the transceiver microphone input while txing packet signals
PIN 4 - OUput of detected 9600 bps date 500mVp-p 10Kohm
PIN 5 - Same but for 1200bps (500mVp-p 10Kohm)
PIN 6 - Squelch Control output (Inhibts TNC data txing while transceiver squelch is open, Prevents interference to voice comms over the same freq. Output leve: Open Squelch +5 V high Close Squelch 0V Low.

They say the 9600 pin should be used when there is only one PIN coming out of the TNC for the data.

The idea I have of connecting them is:

MFJ TMV7
PIN 1 ---- PIN 1
PIN 2 ---- PIN 2
PIN 3 ---- PIN 3
PIN 4 ---- PIN 4
PIN 5 ---- PIN 6

IS ot ok? Should I do it another way???

I really need help.

73's and thx all

Pedro Braz - CT1FQD

Maybe what everyone is trying to tell you is that MODIFIED Ham portables are Illegal on GMRS. Just get a set of the FRS portables of any type. They sell for less than $60 for a pair at Wal-Mart. Of course you may not care that you need a licensee for GMRS or that using a ham radio for GMRS or FRS is not legal. Some folks just will not follow the rules no matter what they are told.

Source record: 79507

I have a pair of FRS radios that have built-in chargers. I have them loaded with NiCads and just plug them in at the end of the day. They are Fanon Courier and cost me a whole $34 a pair brand new off of UBid.

Clarify, please.

You paid $34 for 2 radios that included NiCad packs and chargers?

I really wanted a Kenwood or Icom radio (FRS even) because all the cool features. But $34 is a no brainer!

John

5170. Re: Heathkit "sixer" 6 Meter Rig

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-13 00:00:00 UTC
From: Ralph Mowery <rmowery@dialpoint.net>
Message-ID: <391D415C.D35C314D@dialpoint.net>
Source record: 79514

If you are a collector of Heathkit gear it might be worth something. As a 6 meter rig to use now it is not worth very much. The receiver is very wide and if any local stations are on they will wipe out most of the band. The transmitter is only good for a couple of watts of AM.

While you can work some stations when the band is open, most are using SSB now.

If you want something just to play around with it is ok, but if you really want to work 6 meters you need to look for something else. Something that will do SSB. There is also some simplex FM activity on 52.525 when the band is open but most seem to be on SSB around 50.125 (calling fruquency) to 50.250.

Source record: 79523
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I have a virtually NIB condition HP 54600A 2-channel, 100MHz digital scope. This is the one with the all the automatic measurement cursors, etc. It comes with the accessory pouch, probe set, operating and maintenance manual, programming manual, floppy disk, and 2 HP 54658A Measurement/Storage modules that mount on the rear of the unit. I'll even add a serial cable. I'm looking to trade this digital unit for several older analog units (I'm from the old school). I'll accept offers of TEK 465B's and 475A's in trade. Minimum would be 2 465A's and one 475A. Ex-military 465's are not acceptable. Trades must be in similar condition, but don't have to be in cal. As always, I'm open to dialog (hi). I can scan and email the HP catalog page if someone doesn't know the unit, already.

Still looking for the elusive Hallicrafters HT-20 and HT32A/SX-101A combo.
Thanks for the read. de K3HVG

Most all of them will. It is just a matter of re-flashing the radio's operating system, which is relatively easy to do. All you need is a variable power supply. Buy the radio that is most attractive to you that you want to use out of band. With the radio off, remove the battery pack and connect the power supply to the battery connections inside the radio. Set the power suppy to 4 times the battery voltage. While holding the ptt switch, turn the radio on. This should effectively flash the radio and then you can do whateve you want to with it.

Good luck...

You're not listening to the direct answers provided to your questions.

There are NO amateur radios that can legally be modified to work on the GMRS bands.

Don't even start to challenge my technical competence. I'll bet that I have higher and more prestigious degrees in EE than you do. I'll bet that the systems I build, that secure our national defense, are much more complex than you can even dream of.

Don't get smart with me because you're going to get slapped down. If you want to play the game I'm sure I can easily beat you.

My question stands: I know many 70cm HTs can be modified to do GMRS, but I'm wondering which of the cheap ones can and which ones are easier to modify than the others. Removing the diodes from my TH78A was rough. Clipping a wire would be much nicer.

Thanks,
John

Many will not open today. This is due to the October 25, 1999 change
in scanning laws where any scanning receiver, when tuned to any
possible frequency, a cellular telephone image must be 38db down.
Most all amateur transceivers are type certified as scanning receivers
so they get caught up in the scanning laws. To comply the
manufacturers had to close up the radio's, so the out of band
modifications are rapidly disappearing.

I had heard about this which is why I was asking about which models might be
better suited for 70cm/FRS/GMRS usage. Any advice?

Thanks,
John

Who is the victim if I use a ham radio on an FRS freq with the standard
antenna and running at 1/2 watt? What is the harm done versus the benefit to
me of using one radio for two purposes?

John

If it can be pinned down that the hobby is really dying and that mostly retirees are at the controls, then it must be due to the lack of adventure that younger technicians used to have in designing, building, redesigning, using, improving equipment and reporting the findings of experimentation. Maybe there is no more glamour in the hobby. Or everyone is too busy paying the bills that the old boys already payed; Or there are more things to do now, and would-be hams aren't tied up to stay home. In my case, my wife always wanted to hog me to herself and our four children. She hates high tech stuff with a passion, 'cause it would keep me away from them.
However, I see the stuff for the miracle it really is and it blows my mind everyday to see electronics in action! So I chose a carreer that keeps me involved.
The guys who were good at amateur radio made the money you're spending now on the high tech stuff. It's good to have the high tech stuff, so chances of being able to communicate when necessary is increased dramatically. However, I like the kit building era, and being able to distinguish a good kit from a not-so-good kit. And enjoying the fruits of one's labour by using the finished product.Experimenting to churn your psyche. DX contacts. That's glamourous.
If people are only buying equipment today to have someone to talk to, there are lots of other avenues by which to accomplish this today without taking tests and buying high tech. I never did get my ticket! I just listen to everything (wife taught me that), and read a lot.
Now that I've gathered considerable experience and know-how, I have this urge to talk back and share notes. You can bet my conversations will be of a technical nature. I thought that was what this hobby was about!
If I just want to talk, or be with company, I have a lot of relatives, friends, neighbours, and associates for that. I make sure I keep on good terms with all of them.
Sometimes, a little peace and quiet is good too.

This dual (SWR or Reflected Power on the left, Forward Power on the right) meter is in pristine condition.

I bought it because Kenwood offered different coupler units for it. However, they don't any more. Unit comes in original box with 12v cable (to light meters), manual and remote (1 meter cable) 140-450 mHz coupler. If you can find other couplers, this unit will switch between 3 of them.

This all-metal meter has 20/200w forward and 10/100 reflected settings and reads avg or PEP. http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=330827455

5196. Kenwood TH-25AT 2m (144 mHz) handheld on ebay

Message-ID: <8fjulf$n7o@edrn.newsguy.com>
Source record: 79540

This 2m radio is 11 years old and has been used very carefully. Both nicad batteries still hold a charge over 6 months! I installed a single-board audio amp inside the unit so it is LOUD! Has 14 memory channels and PL module is installed. Unit puts out 2.5 watts with the 600mAh PB-6 batteries included. You get all you see here plus the original manual and sales receipt.

Radio weighs 14 oz with battery pack and is 5x2x1 inches. Metal belt clip on back. Duckie connects with BNC. Would you believe this radio sold for $300 when it was new??

I understand that you can now file for a GMRS license through the internet
at the FCC ULS site. You no longer have to use the dial-up BBS, as the FCC
has convinved itself that the proper level of security can be maintained
over the internet. If you hav a credit card then you don't have to mail
anything. Try these web sites for more info:

http://www.provide.net/~prsg/
http://www.gmrsweb.com/gmrs.html

As we all know, a GMRS license is REQUIRED for all transmissions (no matter
what the power level) on GMRS frequencies that are not part of the
allocation to FRS, and the FCC can and has suspended the licenses of hams
caught operating on GMRS freqs without a valid GMRS license. They expect us
to know better. (Now, there's a laugh!)

Source record: 79544

There are several potential victims. The good people on this newsgroup are quite correct in not advocating illegal operation.

Victim #1: Other FRS/GMRS users you may interfere with by using equipment not meeting spec for that service.

Victim #2: US taxpayers paying for freeloaders and for enforcement.

Victim #3: The person to whom you sell an illegal radio to once you're done with it.

Victim #4: All radio users who will pay higher equipment costs as regulations increase to prevent illegal tampering with, and operation of, UHF radios.

Maybe YOU will be responsible, and maybe YOUR radio will meet spec. Maybe not. It's like letting your underage kids drive 80 mph to school. Sure, maybe they are good drivers, maybe they can pull it off. It's still wrong, and it still COULD affect others in a tragic and unintended way.

Please don't solicit illegal and inappropriate information here. If you do have the technical competence to make such modifications, and do so, it is strictly your own business. However, I would suspect that any person suitably educated would understand the risks he/she is taking by doing so.

Geeez... well I guess my pricing information was a few weeks out date... great deal, go for it..!

Guess it goes to show that it doesn't matter what you but, just don't buy it within 1-2 years of a new model introduction unless you don't mind its value dropping by 50%.

I think I will wait 12 months or so for the the Icom 'coupons' and probably be able to buy a 756 Pro new for $1500. Unless of course the Ultra-Pro is out by then, in which case the price will be $999...

5202. Good Ham radio for GRMS???

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-13 00:00:00 UTC
From: John Roberts <jsrober@hotmail.com>
Message-ID: <Rw1T4.86614$E85.1451388@news1.rdc1.md.home.com>
Source record: 79735

Hi,

I really want some GRMS radio's for my wife and I. Seems like we are always losing each other at the mall, etc.

I have a TH78A that is modified to work on GRMS. So I was going to buy her a Mot TalkAbout 280 for $130, when it occured to me, "I wonder if I can get a single band 440HT that can do, or be modified to do GRMS, for less than $130?"

I found the Alinco DJ-S41T that costs only $89! But, I don't know if it does GRMS or not? Anyone know? Can it be modified?

I know you can get GRMS radios for $30, but I really want ones with built in rechargers so we can plug them in just like the cell phone when we get home. I don't want to have to take batteries in and out of a charger. That's why I like the Mot Talkabout 280: It has a NiMH battery and a built in recharger.

Any advice?

Thanks,
John

Do you mean GMRS? That is the service that requires the operators to
be licensed and the equipment type-accepted...

Problem is that right now the only browser that'll work is Netscape
4.72 and 4.73. These are the ones that have the 128 bit encryption. I
think there might be a couple of other Netscape browser versions that'll
work, but the above two mentioned I know will work. And this is only for
users of the Evil Empire's Winblows 95/98. Win 3.1 and Mac users are out
of luck at the moment, sorry.

I have a retail, non-upgrade, full version legal copy of office 2000 premium. I would like to trade it for a shortwave radio worth about $125 or more.

E-mail me with what you have and I will consider all offers before making a decision.

Here is a link that shows the internet price of $680 and an overview of the program

The first amateur was Marconi in the history books but you
might want to check out Braun, Tesla, and a few others.

"Marconi shared his Nobel prize with German physicist Karl Ferdinand Braun, b. June 6,
1850, d.Apr. 20, 1918, in 1909 Nobel Prize for physics with
Guglielmo Marconi for his work in developing the radio.

Braun, who spent his career as a professor of physics at
German universities, increased the range of Marconi's
transmitter, invented the crystal rectifier (a device that
allows current to flow in only one direction, and improves
radio transmission), and later invented the oscilloscope, a
cathode-ray-tube laboratory device that was the forerunner of
today's television and radar tubes."

Source: The New Grolier Multimedia Encyclopedia

Another great innovation that hams brought to the party
was helping people in times of distress - for FREE! Ironic
that a group of people known for "intense thrift" would give away
life saving services at their own costs - sometimes putting their
own lives at great risk too - and expect nothing in return!

Good luck with your thesis - please post it when done so we
can all enjoy it.

73!

Aparently there must be a lot of us scum because I've received several VERY helpful messages this morning mentioning new and old HTs that are easily modifiable.

Why don't you call the engineers at Kenwood and Icom who are also hams and tell them they are scum for BUILDING the technology I'm simply trying to use. THEY made it easy to modify the radios. Why did they do this?

This is a no-brainer. The manufacturers are out to make money. They
don't care if they sell radios to hams that obey rules or scum that
don't.

The manufacturers ARE hams. The guys designing these circuits are hams.

They go to extraordinary lengths to make the radios easily modifiable.

Furthermore, if the good majority of people felt the way you feel then there would be no market for modified radios. But you've confirmed that there is a huge market for them. Why? Because it only makes sense to be able to use one device to serve two purposes. Especially something like FRS that is so low power, non-critical, and "open".

I manufacture sma-to-bnc adapters that will custom fit the HTX-200 (VHF),HTX-400(UHF),HTX-245(VHF/UHF) Radio Shack H.T. radios.

The low profile adapter is rubber covered for a factory antenna look.

The price is $11.95 + $1.50 S+H

If interested,email for complete information and a photo.

Thanks.

You claim that you have an EE, and then have to ask this question?
Interesting. It speaks volumes about your other posts.

Here's a ticket for the clue-train: They build them that way because
it is cheaper to create a flexible RF platform that can be used in multiple
services. The more wide-ranging the platform, the more profit that can
be gained from the engineer's time.

Simple, eh?

5231. FS: Kenwood TS-50S Amateur Radio

FS: Kenwood TS-50S Amateur Radio

160 thru 10 meters

As New, I have had it put of the box to try it out. I won this rig at a Hamfest about two months ago.

I've had plans to run it in my truck, but have decided to sell it and a VHF/UHF Dualbander in order to by an FT-100.

I bought the MB-13 quick release mounting bracket about three weeks ago that I will include with it.

The radio and the bracket both are in the box, include all paperwork, and have never been registered.

For more info on the rig, use the following url;

http://www.kenwood.net/products/index.cfm?AMA=open&ama_bstat=open&radio=TS-50S&selection=Amateur

I want $650 shipped for the pair. If you want cod, shipping and cod will be extra.

> Simple, eh?

No, of course not. What a LAME answer! The easiest/best way to control what the radio can do is via software. Make each radio hardware-wise identical and then program them with software according to their intended market. This is how it's done in the real world. Do you agree that if they built radios this way it would make it MUCH more difficult for me to modify?

Obviously the ham radio manufacturers/designers don't do it this way. Why don't they do this? Because they are REASONABLE, INTELLIGENT people. If I was designing radio's that's EXACTLY what I would do.

I think you guys are pathetic and have no sense of adventure. I'll drop this now because it's a moot point. I have a list of current models that are easily modified so I'll pick one up at the next hamfest. And you know what? No one, absolutely no one, will ever be effected by my use of the modified radio. Even if the modulation isn't up to FRS spec, considering the 0.5 or 0.1 watt at which I'll use it out in the middle of nowhere, there will be no effect.

I have just purchased an Optoelectronics M1 frequency counter at a flea-market which has no power supply (charger). The case is marked "9VDC", will any old 9v power supply suffice or does it need to be some current sensing type charger. Also which terminal is the positive, the inner pin? The counter didn't come with any handbook either.

Also what does the "Filter" switch filter? When should it be used?

Kevin:

More Re: Marconi the amateur.

I have in front of me here a hard cover book "The wireless experimenter's manual", by Elmer E. Bucher, Wireless Press, Inc. 1920, LCCN 20-5750, LC Call Number TK9946.B85. In the back of the book is a tear out page which is an application form to join "The National Amateur Wireless Association", the fee for joining is $2.50. The address for the Association is given as 326 Broadway, Room 301, New York.

The head of this Amateur Association is listed as: Gugliemo Marconi, President
There is a National Advisory Board of Vice Presidents listed, which includes: Prof. Arthur E. Kennely, Harvard, Prof. Alfred N. Goldsmith, College of the City of New York, etc...

The text on the application reads... "Join Now" You should be a member of the organization that is doing real things for the advancement of amateur radio. etc.... I could make a xerox copy of the application form and fax it to you if you wish.

In recent years we have such "amateurs" as...

Phil Karn KA9Q...

who almost single handedly introduced the Internet's TCP/IP protocol suite to the modern personal computer [IBM clones as opposed to the Unix based computers] by the release of his "KA9Q" TCP/IP "stack" as free ware. Many professional programmers had said that the base PC with the 8086 microcomputer and 640 K of memory could never support such a complicated communications stack and that only powerful Unix machines could do that! Well... Phil did it anyway and then...

This KA9Q "stack" was picked up and modified by many commercial interests and led to the exponential growth of TCP/IP on the PC platform, and made a very large contribution to the commercial growth of the Internet.

<wd1v@amsat.org> wrote:
>The first amateur was Marconi

I'd think he fall into the "professional" catagory rather than
the "amateur" catagory. He had visions of $$$ in mind all the
while he was perfecting his apparatus. Note that his equipment
contained nothing original -- he utilized ideas and devices of
the legions of inventors who came before him. (For example, in
Blake's HISTORY OF RADIO TELEGRAPHY AND TELEPHONY, an encyclopeadia
of early wireless circuits, Marconi's apparatus isn't presented
until page 100 -- 99 pages of circuits and their descriptions
come before him.) We can thank him for putting all the pieces
together into a workable system.

73, Jeff KH6O

I have a Micor Base converted a repeater.
All ready to go on 146.700/146.100 .
It has a 100w solid state final, with output turned down to 50w
for better repeater operation.
It has new helical filters on front end installed,
and retuned by local Motorola tech on the 2m band for full
sensitivity on 2 meters.
It comes with the service manual.

It comes with a Scom 7k controller,
with all options, including pl, and auto patch.
The scom 7k comes with the user manual,
and windows programming software.

The duplexers are made by Telewave.

Model numbers are as follows;
Motorola Micor) 893RCB-3145B-RH52
Telewave duplexers) TPRD1556
Scom 7k controller

Please, serious inquiries only.

15. Dantz Retrospect (backup software) 4.0
16. Sienna Starry Night Deluxe (awesome Astronony Software)
17. Online Bible Deluxe 2.5.3
18. AEC FastTrack Schedule
19. Dave 2.1 (provides for networking Mac's to Windows systems)
20. APS Power Tools, FWB HD Toolkit & CD ROM Toolkit, TechTool Pro,
DiskFit Pro, Conflict Catcher, Eudora Pro, Quick Keys, One Click, Speed
Doubler, Ram Doubler, Stuff It, Quicken, Mavis Beacon, etc, etc, etc.

Books included:

Included is my entire collection of Mac related books, hardware, and
software. There are approximately 3 lineal feet of books, and another
foot of relevant reference magazines.

Miscellaneous information:

I am the original owner, selling this complete Mac OS system after being
forced to switch to Windows NT in order to run certain specialized
software required for my work. I am essentially clearing out all my

bookshelves, hardware, and all Mac software, and including it with the sale of this system. Hence, also included are all original shipping cartons, manuals, documents, etc. All connectors, cables, a spare modem, and many other items, too numerous to mention, are also included. (Note, Jaz and Zip CARTRIDGE shown in photos are NOT included) In addition to the software, books, etc., shown in these photos, many more items are included.

Conditions of purchase: For sale or trade -- whatcha got that might sound interesting? I am into WinNT stuff and Ham Radio right now..

Questions or further information, contact: Mike at: drd@adelphia.net WA6MMR

5245. FT-204 Reset

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-14 00:00:00 UTC
From: Joaquim Silva <jquim@mail.EUNet.pt>
Message-ID: <4v6uhsck86ato28hi43hf5uosnjr7cv4ks@4ax.com>
Source record: 79329

My FT-204 when switched on presents,in the display, the frequency
145.500, VFO A, L.
It receives and transmits in that frequency but no response from the
Keyboard and rotary switch.
Pressing FM key, at power on, it enters what seems to be the display
test, with all symbols blinking. Some keys give beeps but no other
move.
I switched off the Li battery trying to force a reset but no way.
Any ideas?
TIA.

Hi gang,

About 4 days left on my auction of this machine. It's only a 286 but, it will run on 12 volts (comes with homebrew cord). It has the AC adapter and an external 3.5 inch floppy drive along with an external nicad pack (which needs rebuilding). It's light and small (only 1.5 inches high, closed) so it's great for mobile operation. It comes with DOS 4.01 preinstalled (in ROM) but I have run it with 6.22 with satisfaction. Current bid is at $9.99 and you can see it at:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=330799362

C'mon guys, at THAT price, I should give it to my kids (But they already have enough toys.). Thanks for looking.

Radio Randy

5250. TRADE: Icom W32A & Standard C508 Dual Band HTs --> Dual Band Mobile

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-14 00:00:00 UTC
From: tony@bright.net

Source record: 79334
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hi Gang,

I want to swap my two dual band HTs for a dual band mobile rig of comparable value. My W32A is brand new (purchased 5/7/00) and is complete with box, manual, etc. The Standard C508 mini-HT is two years old and is in excellent condition. I have the original box for the C508, but the manual is missing in action. Both radios work very well.

I am looking for a full-featured dual band mobile like the Icom 3230 or 2710, Yaesu FT-8500, Alinco DJ-610TQ, Standard C5900, or similar Kenwood rigs. I need a set with full CTCSS encode and decode and remote control via DTMF.

Let me know if you are interested in a swap.

Thanks & 73,

Tony W8HRO

Did Timewave make any changes to the ANC-4 to improve it in any way?
What is the price now that it is a Timewave product?

If you live in an apartment or any other noisy QRM enviroment this thing
really helps. Most of the time I don't need to turn mine on. But just
now and then someone, somewhere in my apt. complex, turns something on
that just tears up my radios on certain freqs.! Time for the ANC-4. Mine
is a JPS model that I bought b/4 Timewave took the design over. It
works. It just sits most of the time, but when I need it, it works.

Most all of my DSPs are Timewave (DSP-9). I have several. I have one
JPS-10. I love the Timewave DSPs. If you are a utility listener like
myself I think you will be surprised at what you can dig out of the dirt
with a combination of a DSP-9(+) and an ANC-4. Pretty expensive. but if
you're doomed to a Condo or Apt. in a big city these devices can open up
the hobby for you again. I can honestly say they are the difference
between just static and a log entry many times.

(I am not associated with Timewave or JPS in any way....I just like it
when a product does what it says it will do and wanted to say so.)

From the manual it looks identical, except that the power connection
is 2.1mm instead of 2.5mm.

With an ANC-4, you are never helpless in the face of an unknown neighbor's
electronic devices. Indeed cancelling him out can be more interesting
than the hobby you started out in.

It takes a little practice and willingness to try various noise
antennas (I use identical active antennas for noise and main, which
perhaps is the ultimate solution; convert it into a steerable phased array
and use that to null the noise directly).

Actually I have 6 antennas and 5 ANC-4's in a super MW setup, nulling
out two locals on 1270 kHz to hear Imus in the Morning on a distant
third station. These things grow on you.

5259. Charging a NiMh battery pack

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-14 00:00:00 UTC
From: incendie@softhome.net
Message-ID: <391df736.48311611@news.infoteck.qc.ca>
Source record: 79445

4 months ago, I bought a FNB-47 battery pack for my FT-50 from Premier. There was no instructions on how to charge these babies and my emails to Premier have never been answered.

Before I screw it up, I need to know how to properly charge it. For now, I wait until the voltage drops below 7 volts before charging it in my Radio-Shack universal charger (same charger as Maha sells). Once in a while, I "condition" it.

Am I doing something wrong ? If so, what should I in order to do it properly ?

Stay safe !

I think that's what I'm going to end up doing. Although I think the Icom or Kenwood FRS radios are better than the Audiovox.

5267. Yaesu FT51-R mod question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-15 00:00:00 UTC
From: beese <zbeese@home.com>
Message-ID: <ooJT4.82272$lg.385814@news1.rdc1.tx.home.com>
Source record: 79341
Cross-posted to: alt.ham-radio.mods,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc

I've searched for mods for the Yaesu FT-51R. I found one that is supposed to enable receive up to 999MHz. One of the steps says to remove two diodes near the ribbon cable. I can't seem to figure out where these diodes are. I'm assuming they're surface mount diodes--but there seems to be quite a few surface mount components all over the circuit board.

Can someone give me better directions on finding the two diodes I'm supposed to remove?

Thanks,

Zach Beese

5275. Re: Timewave ANC-4 RF Antenna Noise Canceller Ships Monday, May 15

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-15 00:00:00 UTC
From: leonard <lcw999@mindspring.com>
Message-ID: <391FD732.B06AA67E@mindspring.com>
Source record: 79448
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave,alt.ham-radio.hf

Ref: ANC-4 noise canceller...

For what its worth...I have one of these units
from the previous manufacturer. I had a horrible
case of intermittant line noise earlier...I used the
unit for about 2 months...and if you take the time
to tune out the noise...the thing really will work!
The Power Company fixed my line noise situation
and I no longer need it...however, in my situation
it worked as advertised. Also, if you have a bad
case of CRT EMI radiation from your computer
being close at hand...this unit will help suppress
the more objectionable noise...it will make your
unit a bit more listenable...particularly down
on the 40-75/80 meter bands! I had a minor problem
with this...until I bought one of the well-shielded
NEC monitors. Also, I had a florescent light noise
upstairs in the kitchen, I could tune that noise
down also...but, I usually turned the light off
when I could!

In fact, I've about decided to sell mine...if anyone
is interested...everything that came with it, say
for $155.00 COD, you pay shipping. This will
help me buy one of the Timewave DSP units.
I'm still looking for the box it came in...This
price includes the 12v power supply.

Leonard...

P.S. This a very sophisticated unit...it works in
the RF mode and takes the high level noise
on the vertical antenna on the ANC-4...matches
it against the signal coming in on your antenna
and subtracts that noise from your signal...pretty
cool idea! Thus: your signal reaching your receiver
is minus a lot of noise and junk.

"Randall R. Gawtry." wrote:

> Timewave will begin to ship the ANC-4 RF Antenna Noise Canceller to dealers
> on Monday, May 15, 2000. Dealers at Dayton will have ANC-4s in stock (at

Jean-Pierre

It sounds as though you're doing the right stuff. The manufacturers
claim that NiMH batteries are less susceptable to "memory" effect, so
it's okay to recharge the pack when it is less than fully discharged.

I asked the subject question NOT to get into a legal discussion
about what's permitted and what isn't. I merely wondered if
inclusion of FRS--permitted it's legal or could be made to be so--would
be a useful addition to an HT. I was not aware, for example, of the
FRS restriction regarding removable antennas. It's simply that
my family uses FRS and I thought it might be a nice add-on to
an HT so I wouldn't have to haul two radios around.

the logging program i use is Logger 7.04v , which as been updated to the
7.05v it can be found on The Golist,Qsl Manager List site .It is a very good
one which i have gone thru quite a few .
http://www.itis.net/golist/download.htm
Oh by the way it`s free you may want to look at it , If i can help more
please write me at k5luc@earthlink.net good luck with it Luke

5287. A way to make the Yaesu FT50 a repeater ?(simplex/parrot)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-15 00:00:00 UTC
From: yo2llq <doiNOdoSPAM@internetcafe.ro.invalid>
Message-ID: <0f2d94ce.811713db@usw-ex0110-076.remarq.com>
Source record: 79460

Since the FT50 can't do crossband repeat(for design reasons
it just can't), there could be something to compensate
this... Like you could turn it into a
simplex repeater(with the aid of the FTT-12 keypad).
If you know a mod or something to turn the FT50 into a
parrot pse let me also know this.

5288. FS: Motorola UHF Spectra dash mount 450-482 MHz

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-15 00:00:00 UTC
From: raydioluv@aol.com
Message-ID: <20000515145618.22328.00005724@ng-md1.aol.com>
Source record: 79461

Hi,
I have a UHF Spectra A7 450-482MHz dash mount mobile for sale. It has 128 channels and a 8 character alphanumeric dislay. The front face has no scratches and no wear on the buttons. This has the 12 buttons on the right. It has the mike, power cord and mounting bracket. I can program for you. It also has the RSSI option in it which is a relative signal strength reading on the alphanumeric display. I will ship it for $475. Thanks, Bob

Last chance to make this list.
I'll post it tomorrow afternoon.

So far I've heard from most QRP "inside vendors",
but have had only three "outside vendors" respond.

From: Darryl Wagoner <darryl@iCOMS.COM>
Message-ID: <392053A6.C88500A7@iCOMS.COM>
Source record: 79467

I am looking to buy a new mid range rig and it has down to ICOM IC-746
or Yaesu FT-920.
Still open to others, but it looks like these 2 are the finalist. I
know the 920
doesn't have 2m, but outside of that is there any other things about
either
rig that would be show stoppers? I will be doing DXing and contesting
with it.

thanks
Darryl WA1GON

Your alinco might be able to mod to GMRS freq but it would be illegal to trasnmit on GMRS with such a mod. GMRS radios must be type accepted for GMRS service.

To anyone who's ever communicated with the skies via Ham Radio,

We are an Internet TV channel called spacewatch.com, and are currently in the process of making a show about how astronauts often communicate with others via Ham Radio. If there is anyone out there who has any experience with this, or knows anything about it, and would be available for interview, please e-mail me at ciara@spacewatch.com. I would be delighted to talk to anyone with any knowledge of this topic. At the moment the show is merely in the research stages, so any information at all would be appreciated.

Yours,
Ciara.

That might be stretching it. I think MIT's PCIP predated the KA9Q software,
and probably had a larger base of commercial derivatives before CPU speeds
outgrew them.

But look at RFC 1122 for references to the "Karn algorithm" for computing
more accurate round trip time estimates for TCP. I think there is an
ACM SIGCOMM paper referred to in there. I'm pretty sure this came out of
the work with amateur radio TCP/IP (a lot of the really good, fundamental
insights into TCP protocol dynamics in the 1980's came from the experience
of running TCP over the really crappy networks that existed then).

5312. Hold down xx+yy and pwr mods for TM-D700(E)?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-15 00:00:00 UTC
From: Tapio Sokura <oh2kku@iki.fi>
Message-ID: <8fptrg$4alcj$1@midnight.cs.hut.fi>
Source record: 79485

I have a Kenwood TH-78(E) handheld dualbander and its rx goes wide by holding down ptt+vfo and turning the power on, so I was wondering if the TM-D700 has a similar mod for wide rx?

I don't want wide tx, but it would be nice to be able to receive around 150-160 MHz and on 1,2 GHz. I'm familiar with the green wire & resistor mods, but don't want to "slaughter" the rig as it has many moons of warranty left.

I have heard that Icom will start production of 756 Pro
transceivers some where in north america which will drop the
price.
>
>I think I will wait 12 months or so for the the Icom 'coupons'
and probably be
>able to buy a 756 Pro new for $1500.
That sounds about right.
Unless of course the Ultra-Pro is out by
>then, in which case the price will be $999...
I dont think you would ever see a IC-756 new go for that price
unless the stock market droped out and they were dumping them
before going out of business!

Have you thought about an older transceiver? The IC-765 and
IC-761 transceivers are better on receive than even the 756 Pro!
As the older IC-756 rigs are hitting the used market for the
price the 765/761 rigs only a few months ago these transceivers
have droped in price for the used market. To get a better
transceiver than a 765/761 you would need to buy a IC-775!
I have a IC-761 and will simply keep it. They came loaded except
for 2 filters, a verr narrow CW/RTTY filter and a AM filter.
I have both installed in my IC-761 and it works great. I have
had a IC-756 Pro on the desk for an A/B test and my 761 beat it
hands down. I even very much wanted the 756 Pro untill the test!

FS: Motorola 2-Way Trunked Radio System "Maxtrac 800" (410) Baltimore, Maryland, MD area

Dear News Readers,

I am selling my 5 unit, 2 base station Motorola 2-Way Trunked Programmable Radio System "Maxtrac 800". It runs on 800 megahertz frequencies. I will sell the system whole or separately.

For more info and photos, check out our web site at:
http://takingcareofbusiness.com/vehicles/radios.htm

I am asking $750 for the system complete. All offers will be considered!

"BEST OFFER" GETS THE RADIOS !

The system specifically consists of:
5 Motorola 2-Way Trunked 800 MHz Mobile Radios "Maxtrac 800" Programmable
15W 1 System / 1 Subfleet ($3,907.50 new)
2 Base Control Stations ($748.00 new)
1 Deskset Base Station Extension ($434.11 new)

The system was used for my towing company, and we have reduced our fleet and have decided to utilize cellular communications. In Baltimore, a company called Nextel has purchased and is converting 75% of the analog 800 megahertz frequencies to digital signal only, reducing the system my radios operate on. The system was running on 20 different channels, and will probably be reduced to about 5 channels which might be pretty crowded in Baltimore, depending on how may radio users switch to digital or cellular.

If you have any suggestions on any places on the internet that I should advertise these radios, I would really appreciate your advise.

Hi All,
Bought the Sony SC1PC programable scanner on a whim but just don't use it.
This scanner covers from 25-1300 Mhz and can be contolled and operated by PC
also.
I have used it a total of 3 hrs. so it is like new and have all the stuff
that came with it.
I will take $150.00 plus a few bucks shipping
reply to:
gbaker@pacifier.com
Thanks

I have a '91 GMC 1500 truck that probably has the same hardware as your Caprice. I get lots of noise off of the spark plug wires. I've found that replacing the cap, rotor, plugs and all the plug wires including the coil wire about every 50,000 miles helps keep the noise down. It also helps to clean the contacts on the spark plug wires periodically, especially the end that goes in the distributor cap and ignition coil because they get white powdery deposits that will create a spark gap. If your car is like my truck it has a separate ignition coil. Make sure to clean both ends of that coil wire. I found that the dealer had neglected to do so and I got an incredible noise on the radios. That high energy ignition will force a spark through an awful lot of crud to keep the engine running and create a lot of RF noise while doing it.

5328. FT-990 pin-diode modification...?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-16 00:00:00 UTC
From: Uri Blumenthal <uri@attglobal.net>
Message-ID: <392203DE.31106ABA@attglobal.net>
Source record: 79201

Hi,

I saw it mentioned that there's a mod for FT-990 (pin-diode modification) that makes its receiver into something really awsome... It presumably is done (or was recommended) by Yaesu.

Could somebody please clue me in? When did this mod become available? What exactly does it do and achieve? What's the cost of having this service performed by Yaesu? I want to assemble this info before I talk to Yaesu people...

And as we're at it - if you happen to know what's the latest firmware level for FT-990?

Thank you!

FS: Kenwood TS-50S Amateur Radio

160 thru 10 meters

As New, I have had it put of the box to try it out. I won this rig at a Hamfest about two months ago.

I've had plans to run it in my truck, but have decided to sell it and a VHF/UHF Dualbander in order to by an FT-100.

I bought the MB-13 quick release mounting bracket about three weeks ago that I will include with it.

The radio and the bracket both are in the box, include all paperwork, and have never been registered.

For more info on the rig, use the following url;

http://www.kenwood.net/products/index.cfm?AMA=open&ama_bstat=open&radio=TS-50S&selection=Amateur

I want $650 shipped for the pair. If you want cod, shipping and cod will be extra.

I bought a spare tube from someone on this NG about a year ago. Cant recall his e-mail address. The tube is same used in some Hospital Patient EKG monitors. Check Deja News for old postings on this subject. Also under IC781 as they both share same tube. Whats wrong with yours? Mine had cold solder joints on the PC board that I fixed easily. Icom wanted $575 for the whole assembly. The spare tube I am keeping for future in case it really goes or gets badly burned in.

It is an OEM module used for the display, they do not purchase the CRT
tube only. The module has all the high voltage, sweep and deflection
circuits. Likely a tube from a fish finder might do.

I have a VHF DTMF Visar model #H05KDH9AA7DN. I am using HT/JT1000/Visar RSS 3.03. My problem is this. I can program the radio fine without any errors but when I go to transmit, it does not send mic audio or encoded pl tones. It receives fine and decodes the pl tones fine. Is this a radio problem or just an older RSS problem? I haven't checked DPL as the absence of mic audio seems to indicate something else. It does transmit a clean carrier. I would appreciate ANY help on this matter.

5337. Re: How cheaply can I build/buy it?

The simplest receiver is a diode detector. Originally known as a crystal set. Requires no batteries or transistors or tubes. Only receives AM. See any tutorial on receivers for diagrams; it's so simple it doesn't take much at all.

On the other hand, if you want control over bandwidth, or want to receive other types of modulation, better sensitivity, more audio output, and so on, you have to add cirrcuitry and the cost climbs.

73, Bob K6DDX

The FT-100 D is simply a FT-100 with the CW filter, crystal stability filter and the tone squelch decode installed at the factory. The radio is essentially the same. This is good to buy if you don't like soldering and you planned on buying a FT-100 and installing the options later.

Does anyone out there have knowledge of the GE Monogram series radio.
This is a UHF commercial rig I just bought. Mine is made by Ericsson which
took over the GE radio line. It is also the same radio as the Maxon SM4450.

I am looking for the program cable for this radio or a schematic of the
cable.

Any help would be appreciated.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

I own an Icom 746, and spent a good deal of time researching rigs before buying it. It has a couple of advantages over the FT920:

1. Ability to cascade filters
2. Option for a ssb filter, not found in 920
3. Very nice memory keyer. I am not sure if the FT920 has one or not. It also can do memories with serial numbers
4. Band scope. Kind of neat, might be useful in contest

I really enjoy the rig, and think that you will too

I concur with John - along with:

1) Great display
2) Intuitive menu - I've had mine for a couple of months and haven't cracked
the manual yet!
3) Simultaneous metering of Power, ALC, and SWR
4) Lots of great software for it
5) HOT HOT HOT receiver
6) 100 watts all modes on 2 is cooler than you think
7) Smaller footprint - maybe could go mobile with it
8) FAST built in tuner & 2 position antenna switch
9) Twin BPT with display of resulting notch
10) Most features standard, not options like FM, etc. so cheapest yet best buy.

i have a Alinco DX 70t with the edx-2 auto tuner, I am running this in a 1991 Chevrolet Caprice v-8. The problem is ignition noise. Its been a problem with every radio install. My dads car, also a 1991 Caprice has the same problem. Were using resistor plugs. I need suggestions on how to rid the car of this noise, have one filter in line, still doesn't solve problem. noise is about 5-9 and s9 on am.
Has anybody else had these issues with the Caprice & or GM Cars? any help or advice appreciated.

5352. FS: ASTRON RM60A power supply.

Yep,

Still have the ASTRON RM60A power supply for sale.
This unit is perfect for your repeater amplifier as its 50 amps continous.
Rack mount type with dual meters.
Excellent condition.
Shipping weight is 60lbs, prefer pickup NY/NJ. I would be willing to ship and
"split" shipping up to $20.00

$275 FIRM (unit new is $467.00)
Email if intrested.
Thanks

Still looking for some XTR and Syntech II mounting plates
and any 16 button DTMF mics for these units....clean/working please!
and a 99channel option module for the XTRs....
(any spare power cables for XTR /Syn II would be nice too!;)

PLUS...
Have been doing software upgrade on one of my 70-1080As...
I want to permanently change the band limits on some models..
its a pain having to manually change the data everytime I want
to VIEW a channel; much less program it! If you have the info
needed for such, please drop me a note directly...

If you have of the above and are going to be at Dayton, get with me
OFF the remailers ASAP!

Thanks
Chris

As I remember Phil Karn introduced TCP/IP for amateur radio at one of
long gone Mid-Atlantic Packet Radio Council meetings.... (the one held
in Savage, MD). I can't put a year on it. But at the time the TNC-2 was
rumored but not yet a reality.

It was an amateur radio adaptation of the existing TCP/IP. Just as AX.25
was
an amateur radio utilization of the existing X.25 transfer protocol.

However, I think Phil did a lot of development for TCP/IP in his job
(memory wants to say that he worked for Bell but I may be wrong)

If I root around in the attic I might be able to find the diskette
he gave out that day.

But going on from here....
While packet radio was what we could call a "reverse" development in
amateur radio, meaning something we adapted, it sure did open the door
for commercial development of mobile data services.

5357. FT-990 value?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-16 00:00:00 UTC
From: BobJ <bjohnson_bj@swbell.net>
Message-ID: <MRbU4.248$273.151683@nnrp3.sbc.net>
Source record: 79367

I've recently received a Yaesu FT-990 AC (AC/DC) with matching SP-6 speaker, manual, hand mic and original box from an uncles estate, and would like to get some opinions on it's value - 990's are great radios, but it's excess to my needs.

Both the radio and speaker look almost new (9.999 on the ten scale - super super clean) Radio has the Yaesu 2.4K SSB filter, Yaesu 500 CW filter, INRAD 2.0 SSB filter and the INRAD .250 CW filter (NIB - not even installed yet).

The rig is MARS ready (transmits throughout entire receive spectrum), and tested on a power meter, is putting out 200 (+) Watts.

Some opinions on how much I should list it for? It's really pristine and with the extra filters and features, I'd like to ask a fair price.

Thanks for any help - Email would be appreciated.

I have 3 brown ceramic egg insulators that are about 6 inches long and 4 inches in diameter (I can verify if you are interested) that I would like to part with. I would like to trade them for three that are a bit smaller (4 inches long and 2.5 inches diameter), but will sell them for $7 plus shipping. I am in the Dallas area, so if you are here we can meet somewhere and make a swap, or we can meet up at Ham-Com.

Hello to all,

This is a bit off-topic for the hams, but...
If you have any interest in vintage CB radio, please drop by
my Raytheon CB web site at this address:

http://www.qsl.net/k5dh/raytheon.html

It's a "work in progress", but there are specifications and
pictures for most of the Raytheon models I can identify. I
am looking for radios for my collection, along with any kind
of advertising, magazine articles, sales literature, manuals,
and so forth. I'm especially looking for scans of magazine
ads that I can post on the site. Please check it out! :)

Don,

I've read some of the replies here, but not all. I have seen both units.
There are pluses and minuses to both of the mentioned units. A good compromise
might be to wait and go with the new Pegasus FP (front panel ?) coming out. It
may be several months yet, but this will mean some folks will be getting rid of
their older units, in case cost is a factor.

I have heard that the new Pegasus is basically the old Pegasus, but with the
knobs and lights and without requiring a computer. Check it out at
http://www.tentec.com and select amateur equipment.

I haven't had that experience with ham radios, however I did at one point get nasty ignition noise on the car stereo. I have a '75 Dart (V-8, of course), and what I did, is install
8.8mm Accel Spark Plug Racing wires. They're supposed to keep more of the electrical energy inside their heavier insulation, so you will have better RF suppression (and more juice getting to your plugs!) Hope it helps!

5362. FA: ### 16ch VHF PORTABLE RADIO - LAST DAY!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-16 00:00:00 UTC
From: pdfdisp@aol.com
Message-ID: <20000516105339.11289.00000050@ng-cg1.aol.com>
Source record: 79372

For Sale: Relm WHS-150 Portable Radio - 16ch, VHF

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=328793177

The WHS-150 radio from RELM Communications is an incredibly small scanning two-way radio with enough big ideas to make you think twice before buying any other brand such as Motorola, Maxon, or Vertex. This synthesized, 16 channel scanning radio is the 5 Watt VHF version and the predecessor to the new MPV-32 radio. Its ergonomic shape makes it a very comfortable radio to hold and the die-cast covers provide unparalleled protection and durability. The radio's controls have been arranged to make it as easy to use as possible, while its liquid crystal display provides all the operational information you need. But probably the best feature of this radio is that it is user-programmable through the keypad! No programming software or cables are needed!!

Scanning, CTCSS, Full Function DTMF Keypad, Liquid Crystal Display, Battery Saver, Time Out Timer, Programmable Scan List, Priority Channel, Scan Delay, Busy Channel Lock Out, High/Low Power, Time out Timer, and more...
Comes Complete With: Antenna, 700mAH battery, wall charger, and belt clip.
Also comes with deluxe leather swivel case & strap (worth $50 alone!).
Model Number: WHS-150
Band: High VHF
Frequency Range: 148 - 174 (148 - 163 as Shipped)
Power Output: 5/1 watts (user selectable)
Number of Channels: 16 (can be upgraded to 32)
Size (H x W x D) (w/battery): 6.40" x 2.45" x 1.30"
Weight (w/battery): 15.5 oz. (.42 kg)

Get complete specs here: http://www.scannerworld.com/scnp54.htm

This radio is in excellent shape (9 out of 10 cosmetically). It's about 1 year old, and selling because it is not needed anymore. This package is worth over $400! Reserve is only half that! Please email with any questions. Good luck, and thanks for looking!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=328793177

Hummmm, sounds kinda like the grease dried up. You will need to pull the
VFO and grease it up. Hopefully there is no damage. If I remember right
, on Rick Measures web page, he has instructions for lubing one of
these. It will be in the info for the TS830, but they both use the same
VFO. Maybe you will get some more info.. MK
PS. I think Ricks web page is: www.vcnet.com/measures.

5372. Re: Yaesu VX5R or ICOM - Kenwood?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-16 00:00:00 UTC
From: sdpearl@bellatlantic.net
Message-ID: <oMiU4.1806$Ps1.49519@news3.voicenet.com>
Source record: 79382

I have a VX5-R that I picked up in February of 1999. There are many, many things I like about it. There are few I'm REALLY not keen on. Be aware of the drawbacks in advance.

First, the good stuff!

1) GREAT audio! I also use it as an FM radio at work but the send-receive audio is quite good for a radio of this size.
2) Rapid Charging on the LiON battery and it lasts a good long time.
3) WIDE receive. I routinely also use this radio to listen to Shortwave broadcasters with reasonable success as well as UHF broadcasts all the way up the dial.
4) An ENORMOUS number of possible control features. Barometric pressure capability, ambient temperature, SpectraScope band scanning, etc, etc, etc.
5) Yaesu's service and turn-around really are first-rate.

What I DON'T like, though...

1) I don't know how they acheived Mil-Spec rating, I had mine in the shop 2 times in the first year of ownership. First a capacitor blew in the power stage and it wouldn't power up after a drop of less than 3 feet to a carpeted floor. Then the frequency stopped locking properly and drifted back and forth over a 5kc range at any transmit OR receive value. The belt clip broke after 6 months of moderate use. The 3rd pin in the speaker/mic jack has gone awol, thus making it impossible for me to program via PC. I also can no longer key-up with the speaker/mic... Do I relish sending it BACK to Yaesu a 3rd time (this time out of warranty) for a repair on the jack?
2) You'd better carry the cheat sheet with you all the time because remembering what all those multi-function buttons do is maddening. The radio has SO many features that it's really tough to remember them all.
3) Don't underestimate how frustrating it is to keep track of a 1/8" long screw-on tip for the antenna. The 6m loading coil is easy enough to keep track of, but the 2m/440 tip is way too tiny to not lose.
5) This puppy gets REALLY hot during transmit on high-power. Since the radio is so small it really cranks up the heat very quickly under a high-power transmit in the palm of your hand.
6) It is possible to make a radio "too small." I find it's really easy to lose my grip on this thing and I've stopped it from hitting the pavement when I lost my grip by quickly getting my foot under it on more occasions than I can count.
7) There are some really strange and annoying gaps in the frequency coverage on this unit. From MW to 16Mhz...? Huh? Then it picks up again in the upper 40Mhz range and goes up to the 700 range but drops all the

UHF frequencies from CH 50 through the mid-60s. Huh? For such a broad-banded radio with an otherwise fantastic level of coverage I just don't get the frequency gaps that wound up happening on this thing.

Would I trade it for any of the alternatives on the market? NO WAY! In spite of the frustrations I've had with it, it's still the most FUN HT I've ever owned. I carry it with me EVERYWHERE!

Now, let's see how long it takes Icom to take their new R3 and turn it into a transceiver.... THAT will be a unit I'll buy on SPEC if they ever turn it out!

Regarding ignition noise, it is hard to diagnose from a distance, but I'll try to give a pointer or two. I think it is unusual to have much ignition noise from a GM car, but it does happen with all vehicles from time to time.

1. Run all power leads direct to the battery.

2. Check all installation issues (antenna mount, coax for bad connect-ions, etc.

3. Ground the radio via shortest route to frame/body.

4. Make sure that the body has good ground to frame--might even run gnd straps to frame at both ends.

5. Make certain antenna mount is grounded/installed correctly.

6. Ground hood and trunk on both sides near the hinges.

7. Ground muffler(s) with braided straps to frame. (Welds often do not provide a good RF ground.

8. Remove antenna and see if noise is still present with whip off. If it is, it is RADIATED noise.

9. If it is radiated noise, then you have to find what is radiating the noise to the antenna. I once found that ignition noise was following the taillight harness back to the light bulbs and radiating the noise onto the antenna. So remove the light bulbs in the taillights and seeif it stops.

10. I have never seen any inline filter remove ignition noise. So in-stall caps across the alternator (for whine), and across the power leads for electric fuel pump (if any).

11. How long has it been since the plug wires were replaced?

These are just some of the things you can do to stop the noise. It may be something simple, or it may be hard to trace. Chevrolets are usually not very noisy, so I tend to think there is something amiss with the electrical system (plugs, wires, etc), or the rig/antenna is not in-stalled properly.

Good Luck,

Jerry

A different note on the same radio. I just got a 530 in a trade. The digital readout on it seems to get confused when the radio is first turned on. It kind of locks up and seems to be searching around for the right place to land. I had one fellow tell me to "whap" the radio on the top right above the digital read out. While I disagree with the "bigger hammer" method of radio repair, after a couple of hours of fiddling with no results, I used the "drop a fist" method on the top of the 530 right above the display. Guess what? It worked. Could someone 'splain' this one to me. Maybe one out of ten times I turn the radio on the display goes nuts, hit it and it works?????? 73, KCï¿½GKZ

Hi Dan (and lurkers),

You bring back old memories. I got started in ham radio in a place where a lot of the kids had way less than I did, and I didn't have all that much. But one of the fellows who got his license when I got mine did quite well with some home-made equipment. He talked (on CW) 3000 miles across the country with a very simple transmitter and receiver. The receiver was a regenerative set with one or two tubes. We used to get parts from scrapped TV sets and radios. You can do the same sort of thing now with transistors. I'd be surprised if you couldn't get all the parts you need for free. If you were nearby, I'd gladly give you old boards with plenty of parts to do everything you need, except perhaps tuning capacitors, but hey, I'd even throw in something you could use for that if you were serious. I'll bet you can find 'lectronics 'sperimenters and the like in your area that will give you all sorts of stuff.

I've listened to broadcast stations from about 1000 miles away at night with a "crystal set." OK, I cheat: my "crystal" is a semiconductor diode, and I follow that with a simple audio amplifier. But you can learn a lot from something so simple: you can learn about tuned circuits and how to make high Q coils to keep losses low but still reject local stations.

There are web sites with all sorts of simple receiver ideas. I'm sure others will post some pointers for you, or you can just do a web search.

Cheers,
Tom

WA2FSO,
First, lets find out if your getting the noise through
the power lead, or the antenna. To do this, while the car
is running, and your hearing the noise, disconnect the
antenna. If you still hear the noise, it's comming through
the power lead. If the noise disapears, it's comming in
through the antenna.
While plug wires may make a difference, they aren't the
only source of noise by any means. The same methods of
getting rid of noise always apply; shield, by-pass, and a
five gallon bucket of torriods. '91 usually doesn't have
a fuel pump in the tank, but it can have an electric fuel
pump. If so, by pass it with a capacitor. Try grounding
the motor block to the chassis, body panels to the chassis,
the radio/antenna to the chassis. Everything you can think
of to the chassis. The individual body panels, etc, will
make a small difference, but they are all accumulative. The
'total' can make a big difference.
One note on grounding straps. 'Braid' works fine when
it's first applied. Over a period of time, it will deteriorate
and the 'ground' will suffer. I'm not talking about tarnishing,
I mean that the weather/polutants/etc will make it 'rot'
away. Use a metal strap, such as copper flashing used around
chimneys etc. The bigger the better, within reason.
Good luck.......
'Doc
PS - By-passing the power lead, etc, is never a bad idea.

If'n I was you, I'd look twice at the regen receiver KIT by MFJ. It has always been an ordeal to find specific components and be able to buy them in quantities of (1). In later years with the advent of Surface Mount Technology and micro-miniaturization, I have found it to be almost impossible to buy all the parts needed to complete a project. Even if you could, the cost would be formidible.... kind of like buying enough parts from J C Whitney to build your own car.
A kit eliminates the scavenger hunt and if it doesn't work properly when completed, you usually have the option of sending it in for a "tune up." (Like the oscilloscope kit I put together that didn't work.... turned out, I left the component leads too long and they built up capacitance)
I've tried building magazine projects, but often the author wrote the piece a long time before it was published and the IC's and such were discontinued before the article came out. Then you have $134.52 invested and lacking one or two vital components. (Remember Jim Bede's homebuilt airplane, the BD-5? Hundreds of the planes were begun and completed except for the engine installation components. They made expensive conversation pieces, but not many flew.
In summary, home built is okay, but limited. Most folks are appliance operators... not out of choice. I knew one ham that was an EE at an electronics firm that was a supplier to the Dept of Defense. He actually performed a re-alignment of his own transceiver, but took many hours and the use of half a million dollars worth of equipment.... not what most of us are privy to.

Daniel,
That depends on what you may have in your 'junk-box'.
It's possible to build a very simple reciever for zero
dollars, and then again, it can cost a lot more than
buying a new one.
If your very close to a broadcast station, a diode
and a set of earphones will/can receive it....

My experence is with my 87 Suburban. The HEI ignition is a killer and my first rig, a DX70, had virtually no noise blanker whether in the mobil or out. So I traded off and put a 706MKII in my Suburban. Ignition noise still a problem until I got the Magnacore wires. Now that helped a bunch. I did all the grounding, etc and cleaning you could imagine. I run the 706 with a Bandhopper screwdriver antenna and use a Ten Tec amp. So far my HF mobil ops are really fun.

I believe you may be missing a distinction between a "dual-band" radio
and a "dual-receive" radio. The W32, unlike the T81, is capable of
receiving two separate frequencies *simultaneously*. This means that
you can, if you want, actually listen to the audio of both of them
superimposed (and I'm told that some people can understand both of
them, though I personally generally can't (maybe practice?)), or at
least have one of them immediately mute if the other comes on. It
also lets you do things like transmit in one band while listening in
the other. The T81 is not capable of these things.

I started building ham gear last year so I'm kind of where your at experience wise. However I've had some time to look and see what is out there.

I just built the Ten-Tec 1253 9 band receiver last month. It cost $59.00 (+ s.h.). Its a regeny but it works pretty well. The selectivity leaves something to be desired but..... I built it to use while I got my tube based superhet built.

The gear I build uses tubes for two reasons. One, I got a lot of them that I collected as a kid that were still in a box in my folk's basement (after 25 years). And because they're so damn neat.

If your on a limited budget like I am, tubes can be the way to go. The superhet that I'm building is costing me only a few dollars, mostly for the transformers. I got most of the parts that I needed from some old junk tube radios that I got for a buck from a second hand shop.

If your looking for something fairly easy to build without a lot of cost, look into the kits offered by Ten Tec, Ramsey, and others. Kits are a good mix of cost, perfomance, and simple construction trade offs.

If your interest, e-mail me and I'll point you in some directions to start (may not be the right direction but still..). Good luck

This is a really nice and clean collector's item from the World War 2
era! This is a WWII Navy/Bendix LM-18 Frequency Meter for auction.
It is in great to excellent shape! I even have the original matching
manual for it. This is the last day and there is no reserve!

Jeff:
Maybe I don't understand the question, but why can't you just purchase a relay with the coil voltage appropriate for the output of the 850 and then key the Collins rig from that?

Oh, a challenge! I'll bet I can receive FM on one... Of course, I DO need to add some tuned circuits, or at least one tuned circuit. But for sure there's no reason I couldn't build a ratio detector with just diodes and tuned circuits, tuned directly to an FM station. And slope detection is even simpler. Stereo might be a bit tough, though. ;-)

Cheers,
Tom

Alinco radios come with directions for hooking to a Kenwood or Yaseu automatic tuner. BUT the Alinco web site says the edx-2 is for use exclusively with the Alinco 70 or 77. I have had an edx-2 on my 77 for two years. Remember it does NOT operate like an SGC.

Best to begin with the most simple and inexpensive arrangement
possible.

The most simple receiver is for the medium-wave AM band. All you need
is a coil wound on a toilet roll tube, a 350 pF variable capacitor, a
germanium diode and 150 feet of 20 gauge magnet wire. Half the wire
will be on the tuning coil and the other half ouside in your back
yard. Use your domestic metal cold water pipes as a ground
connection.

Because a pair of sensitive high impedance, 4000 ohms, headphones are
very expensive even if you knew where to get any (you cannot have
mine) you will need a single-chip, 200 mW, audio power amplifier and a
small, 2" 8 or 16 ohm loud speaker. Or a hearing aid insert.

Put a small soldering iron and reel of cored solder on your shopping
list.

When that job's done you will be well on the way to becoming a fully
fledged radio amateur.

If you take Bill Kane's advice and give up on the Chevy, consider a Ford
with the 460 engine. I have a '96 F-250 pickup that I can operate HF mobile
in WITHOUT THE NOISE BLANKER. It really is that quiet, believe it or not.
I have been HF mobiling for almost 40 years in all kind of vehicles and have
never seen anything as quiet. YMMV, of course, so take a shortwave receiver
with you when you go car shopping and try to ignore the puzzled looks from
the salesman.

Remove AC power to the radio. Remove the four allen head screws on the front panel at the four corners of the VFO face plate. Pull the VFO toward you and out of the case about two inches. Slide the two pilot lamps from their support brackets. Pull the VFO toward you another three inches or so and remove the connector on the rear of the VFO. Lubricate the gears with a non-hardening gun grease. Reinstall the unit by reversing the process above. The Allen key size is 3mm.

Dear M. Dawson,

I went through the same decision process around two years ago, and I ended up with the Butternut HF6V in a ground-mounted configuration. With a dozen 26' buried radials, it does quite well on all of the bands that it supports. My radial arrangement is non-symmetric, but it doesn't seem to cause any detriment to performance. I've had a lot of DX contacts on 75M as well as the higher bands. The antenna works very well on 20m too. The only weak point is the relatively high angle lobe that's present on 10m due to the 3/4 electrical wavelength on this band.

I'm happy with the antenna.

Well, for the fun of it I built a small 80M CW receiver, transmitter, and telegraph key for about 10 bucks in the hardware store plus some minor parts scrounging. It is crude, but it works. One can do a lot if one scrounges and thinks a little about it, and is good at adapting the flotsam and jetsam of the electronics world to make the critter.

http://www.mindspring.com/~johnmb/na4g2.htm

Not necessarily recommended for contesting, but great for a little fun on 80M, in the evenings.

Good Luck, and have fun building.... that is a lot of the fun of Amateur Radio.....

Hello Dan,
My hobby is building the one tube SW sets modeled after the 1934 Doerle Twinplex. Would be glad to sell one for under $50 shipped. Can email photos if you like. Regards,

Kenwood TS-450SAT HF transceiver for sale.

The radio is clean and works great. It is currently my daily radio but I am upgrading it to 850. Physically, it is solid 9. No options installed and it is in stock condition. I am also selling PS-50 power supply, which is actually the matching PS for TS-140, but works great with 450 as well. The color of the PS is a little lighter than 450 but the size matches. PS-50 has its own power cord that fits on 450. I don't have the original power cord or mic for the TS-450. It comes with

Spanish and French manual but I don't have the English version. I don't

know either language, and I normally have my wife read the manual for me. If you want to hear it on the air, I will do so, but only on 20 and

15m because I use IsoLoop as my main antenna.
The price of the TS-450SAT is $625, and the price of the PS-50 is $100, but $700 for all. I will sell the PS-50 only after TS-450 goes first. All prices are in US fund and do not include shipping. I am an experienced packer, and most likely ship them by UPS. I can deliver it to Dayton,
so you can save the shipping cost. Just a reminder, the price is not set in stone.

Thank you for reading this ad and 73,

Christopher VA3UT & VE3UVT

Dear OM

I have read the postings here advising you of what to do. Its all good advice. Unfortunately I had a Chevrolet Caprice 1987 with the same problem as you and never was able to curb the ignition noise, maybe a couple of db's that was it. My 706's blanker made no difference, in fact it was overwhelmed.

I did all the things the others have advised and then some with no satisfactory results. I even went so far as to buy an ANC-4 noise eliminator and put a sense antenna directly into the engine compartment and tried to phase the noise out but to no avail. Just a waste of $160.

I even questioned the General Motors engineers who show up at Dayton every year in a special booth inside and they did not know what to tell me. Every solution they suggested I had performed with negative results.

I tell you this to help you avoid going through a very frustrating experience. These GM cars pump out 40kv spikes that no kind of suppression, even digital, can cure. Bad design or what, I don't know and no longer care. I would set my sites on getting another vehicle down the road and assure myself it is inherently quiet. As for me, I mobile as a portable on HF. As soon as I start the engine and begin to move I turn the rig off so my blood pressure dosen't begin to boil.

The only vehicle I ever had that I could HF mobile in was a diesel. Do yourself a favor and give up on the Chevy. Sorry to be negative but that is my advice to you.

$1200-$1300 as stated, but the rig is good for 100 watts only.
If your meters show 200+, then somebody was inside playing with it.
It is not stock, and I would be cautious to foul play.
What else did they play with while inside, where they a good tech
or a golden screwdriver?

Not sure on that problem, but a common one with the display is where the
plug from the display plugs onto the main board in the radio. I think
it's about a 4??? pin plug, and I've had a few times on my 830 where I
had to wiggle the plug to get the readout back. But usually when it does
that, it will freeze at some goofy number instead of hunting around. I
think anyway, it hasn't done it in quite a while.It only takes a light
tap on the plug to get it back on mine. I'd check all the plugs and
check for any loose board mounting screws for a start. Unplug the line

from display off the board, and plug back in a few times to clean the pins. Usually when a "whap" fixes a radio, it's because something is loose or making a bad connection. Even a dirty bandswitch could possibly cause this. MK

Find a nice pre-1976 Mercedes diesel for about $1500. Spend a few
thou restoring it. The only electronic noise comes from the cars
driving by you. The "computer" is a lambskin diaphram sensing the
airflow in the venturi at the intake. It never bothers 40
meters....(c;

Mine's a 1973 220D. Finest ham radio car in the world. The HUGE
battery and 85A alternator have no problem pulling the Yaesu FT-900
and souped up TenTec Hercules II running 650W output to a 15' homebrew
monster with 6" Texas Bugcatcher coil and 36" cap hat. Only problem
is the dash lights glow when you use it on 75 meters. Something must
be resonant in the wiring...(c; The MECHANICAL voltage regulator
never gets overrun with RFI at any power level.

It'll stall a Cadillac as it passes you on the interstate....hee hee.

Larry W4CSC....
Don't assume it's not dangerous when noone's aboard. The crossband
packet node is running in the parking lot.....

5453. Heathkit parts needed

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-17 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <kPwU4.47$CH5.9883@bos-service2.ext.raytheon.com>
Source record: 79242
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

HEATHKIT PARTS NEEDED:

For DX-40 transmitter:
- Power transformer (or a suitable substitute).
- Plate current meter.

For VF-1 vfo:
- Frequency dial scale, in good shape with all markings intact.

For AC-1 antenna coupler:
- Front panel, in good shape with all paint and markings intact,
and with no extra holes or modifications.

For MT-1 transmitter:
- One medium-size satin finish knob.
- Glass window that goes in front of the VFO dial drum.
- Cabinet, rust-free with no extra holes drilled in it.
- Operator's manual with alignment and troubleshooting
information (a good photocopy would be fine). I have
the schematic, so don't need that.

Message-ID: <8fvf96$i16$1@nnrp1.deja.com>
Source record: 79182

I was working for The National Weather Service during a thunderstorm last tuesday when my FT50 stopped working properly. The unit will no longer recieve or transmit on ANY frequency other than 2 meters. The display just flashes. I tried resetting the CPU, re-programming the radio, changing country codes, etc., with no results. Any ideas on whats wrong? Did the CPU get zapped by static electricity in the air? Is the radio repairable at a resonable cost, or is this thing just smoked? Everything else seems to work. It will transmit on my favorite repeaters on 2 meter but not in 440.00. I can't listen to or transmit on anything above 150.00 or below 130.00. Please advise. Thank you in advance for your assistance.

5466. F.S. 5.7 GHz Amplifier 10 W

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-18 00:00:00 UTC
From: Jochen Zilg <mmwave.zilg@t-online.de>
Message-ID: <8g01efatf13$1@news.t-online.com>
Source record: 79190

This 5.7 GHz MIKOM- amplifier has the the same quality as the is 10.4 GHz
amplifiers. They are factory new, and tuned to 5.7 GHz.
The specification of the MLA 9407 after tuning is:
The unit is a complete amplifier system including AGC, Isolators at input
and output. Connectors: SMA.
Gain > 40 dB, Power out at 1 dB comp. point > 39.5 dBm (measured after the
isolator).Frequency range is 5.76 GHz +- 100 MHz.
The case is small enough to mount it directly at the feedhorn of a parabolic
antenna (case is slightly shorter then 10.7 GHz amp.).
System was originally used as transmitter amplifier in a 16 QAM radio relay
link (SIEMENS).
Amplifiers are not used (factory test protocol) and tuned to 5.76 GHz.
Power supply +11 to 14 V @ 7 A and - 9.5 Volts @ 100 mA.
Detailed datasheet and documentation incl.
The last transistor of the amplifier is a matched 16 W type !
Amplifier comes with two low loss cables 50 cm, .2 dB SMA.
The price of the tuned MLA9407 amplifier is 950 DM plus transport costs.
Transport costs are 20 DM (europe) and 146 DM (US).

Best regards

Jochen Zilg

5467. FT-51 Mod to 999mhz Hoax!?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-18 00:00:00 UTC
From: Cole Clayton <kc5swi@home.com>
Message-ID: <96MU4.10518$m7.1445870@news1.rdc2.tx.home.com>
Source record: 79191
Cross-posted to: alt.ham-radio.mods,rec.radio.amateur.equipment

Hello all.
I own two ft-51's and have been searching for the "mega mod" for months. I have been and seen the text on this mod. From reading the mod details on the mega mod,
I dont believe the mod really exists. The mega mod writer didnt even get the number of solder blobs inside the radio, and he refers to removing two of the three diodes when there are dozens of surface mount conponents on the board near that location! I doubt he has ever seen the inside of a ft-51.

To top this, I have written to every ham that I can find that claims to have done the mod. Most have written back admitting only the mars mod was what they refered to, not the mega mod! No reponses to indicate the mod is for real!

I believe the mega mod on the ft-51 is a HOAX!!
Someyone prove me wrong!! I dont want to know yours is the only ft-51 that scans to 999mhz, I want the FACTS, to know what was modified specifcally!
Tell me which diodes to remove.....bet ya cant!!!

Hi there.
I am considering the purchase of a used Yaesu FT-100.
I understand that there were some problems with the early batches of these rigs.
Can anyone fill me in with details as to what the common problems were and how Yaesu fixed them (apparently Yaesu did correction mods under warranty !?) ? I heard that there have been new revs on some of the boards for later batches of FT-100s. Are the serial numbers available to differentiate the various revs of the boards within the radio and if so, what are they ?
Any other pertinent info on the FT-100 would be appreciated.
Many thanks de Hugh VA3TO

Here ya go. Here is an individual who did this quite a bit. I also recall quite a bit of coordination handled by HAM ground stations during the MIR fire.

Christopher Cox

<<
G'Day from Downunder to all.

Back in June last year, I published a six-page story in Australian radio magazine "RADIO AND COMMUNICATIONS", which I publish. The story was a major question-and-answer session with Dr Andrew Thomas, VK5MIR (now VK5JAT), with
whom I was lucky enough to have had many contacts as he floated by. That story was later published in the AMSAT-NA journal.

I was even more fortunate in late October to follow up this series of chats with a personal meeting and interview with Andy, who had returned to his Australian homeland for a quick visit.

That subsequent meeting has turned into another blockbuster! In the February
1999 issue of RADIO AND COMMUNICATIONS the front cover features pictures of Andy, the Shuttle and and Mir, and there's six pages of story and pictures inside. This time I was able to talk with him in more comfort, and discussed
a lot of aspects of his career and how he views his future.

It's clear that the majority of you would not see the magazine -- it's sold only in Australia but we have a LOT of overseas subscribers!! -- but rather than clog up the news groups with a story you may not wish to read, we have put the entire thing up on the Web.

I think you will enjoy the story, and you'll be able to see a properly formatted page with pictures and all rather than just piles of text...

If you're interested in reading the story, dial up
http://www.trsc.com/Radio_and_Communications/Past/past.html

And please -- tell me what you think of the story! I'm sure there will be another like it in the future. If you missed the original story from June last year and enough are interested, I'll put that up on the Web as well.

73 and good luck to you all from Chris Edmondson, VK3CE

I also have the HF6V - ground mounted - with about 30 + radials for all bands worked, wagon wheeled around the antenna and it works great. A very good DX antenna. In this configuration, you don't do a lot of local work (within 300 miles or so), but I use a dipole for that.

Mines been up (guyed) for 6 years and has withstood the traditional Midwest snow and ice storms, and occasional 50 - 60 mph winds, without damage or need for retuning - very impressive.

I wouldn't hesitate to recommend it to anyone - it's also the antenna most DX expeditions take with them - easy up and down, dependable, and an excellent performer.

No, I don't work for 'em - but I sure like their products.

John

I was one of the first of only about 350 hams to make a two-way contact with the first ham astronaut, Owen Garriot, W5LFL, in the Space Shuttle Columbia.

This was in late November, 1983. Not too much to it. He said, "N7WS 5 by 9, one of the loudest stations we've heard in the spacecraft." (Heh-heh-heh amazing what 100KW erp can do on a line-of-sight path)

The problem was in the IF. Prevalent magnetostriction of component structure created sublimate urrilation in the frequency sine inverters. This would occur only when tuning in the 30 to 40 Mhz areas of the band.

My email is my call @arrl.org
This should open a real can of worms. I am getting an IC-746 this weekend which does HF/6m/2m. I'm looking for a linear but can't shell out the $5K for an ICOM. I've been looking at the Ameritron AL-80B. Opinions on that or any other 'low cost' amp? I gather I'll also need a high-watt tuner to follow it.

So watchyall think??

5489. FA: Yaesu FT-8100R Dual Band Mobile With Separation Kit and Optional Tone Board

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-18 00:00:00 UTC
From: Will Middelaer <Will@REMOVE-this.target-sucks.com>
Message-ID: <8g1oqo$76c$1@bob.news.rcn.net>
Source record: 79263

On ebay, I have a Yaesu FT-8100R Dual Band Mobile Transceiver with extras up for auction.

The extras include the YSK-8100 Separation kit and the FTS-22 Tone Squelch Decoder board. The FTS-22 has already been installed in the unit.

Everything that came with the radio is still present, including the original packagaing. The mounting hardware was never even taken out of the little plastic bags in which it is shipped.

For more info, a picture, and to place a bid if you are interested, please check out:

Everyone has one, but this is my opinion.
The AL80B is the best bang for the buck you can buy in a quality tube type amp at this time. My Al-80B driven at 100+watts input, shows 1,200 watts pep on my digital P-3000 watt meter. I have it wired for 220. The last Kenwood 922 I had, running 2 3-500Z tubes only put out 1,400 watts pep.
The AL-80B does almost as much with only 1 3-500Z tube.
The meters on the amp are great, the audio is clean, and it is just about bullet-proof.
But, as I said. That is just my opinion. :-)

From: John Dewey <KA9CAR@NS.arrl.net>
Message-ID: <8g3ukg$jl5$1@news.tribune.com>
Source record: 79056

I have had mine for almost 2 years. I use it for PSK31, SSTV, CW (filter is included in the T model but NOT the TQ) and also for ssb. I use the rit and the IF tuning to control adjacent signals.

I have the rig under frequency and mode control from my PC using LOGEQF. Using a terminal emulator, you can do anything from the terminal you could do from the front panel. I have not seen any commercial program to control the rig.

I also have the EDX-2 tuner.

I use an external speaker as the internal one is a bit on the small side. The rig will NOT work cross mode split, but works same mode split easily.

I like it

For sale: Pretty clean (a couple of scuffs around sides--clean glass and face), non-smoker, stock, no filters or boards, has DSP installed, ham band only transmit--no mods, manual, stock mic, box, 13 pin accessory plug, power cord. $725.00 shipped CONUS, US Post Office or UPS, insured, your choice. I took this rig in trade and have used it for about 2 months as base rig primarily for 6 meters. I have no need for two IC-706MKII rigs (I use my original mobile). e-mail direct or call me at 616-624-4481. Rudy, K8SWD

Hi,

I have bought ALINCO DJ-480T (UHF) the same is DJ-180T but works on VHF. The rig has been set to work on preselected chanels only. I'd like to change the mode to VFO. Any idea how to do it ?

Regards,

Dragan

You could change the channel after all. I though you had to first erase it
but I was wrong. Thanks to all who replied. Have a good weekend.

I regretfully sold a 10 meter amp to a non ham person. the amp was in great condition there was no bulbs or dents of any nature. this was almost 2 mo ago.. This joker Bob Burdett sends me a letter with some invoice stating there was cigarette burns and bulbs out and wants 50 dollars .. looks like another scammer out there watch out people. needless to say if i get a another letter from this person he will be getting a letter from my lawyer. This person must think i am stupid.. it was sent insured so if there was a problem in shipping then he should of took it up with me to contact the shipping CO and they would pay for the problems if there were really any.. BEWARE . i will not sell to non hams again. yes u can still get burnt but the odds are much better.

From the front, it could be one of two general Midland models. It's probably the older Syntech I series. This radio has a little eeprom PC board pluged into the main circuit board and requires a 70-1000 Midland proprietary programmer to program it.

It could be an XTR radio, which you can tell by looking at the back. It what looks like a small black mobile radio is sticking out the back side, that's what it probably is. It can be programmed with Midland software, a special Midland cable, and a PC.

Of course I can't tell what band it is from the picture. A model number would really be helpful.

5523. Re: gold/teflon vs. silver/teflon connectors

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-19 00:00:00 UTC
From: Bob Camp <bob@cq.nu>
Message-ID: <hikV4.238$yi.4790@news02>
Source record: 79070

Robert,

Assuming that all of the connectors are Teflon filled I would not worry about any of them. Both gold and silver plated connectors should work fine. Some silver color parts are stainless steel. Again, no issue in ham use. For normal indoor ham type use they will all work equally well. If you plan to use them on an F-18 to route signals to your radar set then that's different .....

In all cases the conductivity of the plating is very good and there isn't much of it in any case. The gold will solder better than silver in most cases, but again the difference won't be enough to notice. It will also hold up better out of doors than the silver will. Stainless is less conductive than either of the other two, but it takes some very good test equipment to even begin to see a difference.

About the only issue I can even imagine having an effect is that most references you see will recommend using gold with gold, silver with silver etc. This reduces the chances of corrosion forming between dissimilar metals. If you are in a very damp environment, or working outdoors this might be a consideration. Stainless steel will probably out perform either plated connector in these environments.

One other exception, if you are building communications satellites and are worried about -200 db down IMD products you might want to avoid plated connectors of any sort. Of course if you are in that business you probably already knew that ... :)

Enjoy!

> Many thanks de Hugh VA3TO

Hi, Hugh,

This is purely anecdotal evidence, but it may be what you're after.

My best friend just ordered a new FT-100 to use in his mobile rig.

The first one shipped to him had severe transmit audio distortion which he traced to the microphone/mic preamp circuit, and it also exhibited a VCO lock problem, meaning that whenever he switched from UHF to an HF band, the VCO wouldn't lock up right and all the signals would be warbly. He would have to switch back and forth several times before it would lock up correctly. He sent it back and they shipped him another one.

Unfortunately, the second one had a problem in the optical encoder switch. He sent that one back and he is waiting for a third one.

Coincidentally, I ran into a ham at work the other day who has one and has also reported transmit audio distortion problems.

Boy, if it were me, I'd probably consider having dodged a bullet and ask for my money back. But my friend is pretty patient. Good luck!

R,

Al W6LX

Hello folks!!
Just wanted to let everyone know that there has been major improvements to
the world wide voice & Text chat system for hams!! There is now the
provision for private chat rooms. The idea is that you wait for someone to
arrive in the main chat then go to a private chat with them if you wish. The
audio in the system rivals that of anything currently available and also
supports a text chat on the same screen. Use the system to set up skeds,
check the muf on a freq, meet new hams, have meetings or just plain ragchew.
Go to the url here to directly enter the chat
http://home.earthlink.net/~mitbr/AmateurRadioChat.htm
If no ones there when you arrive simply hang around for awhile while you
surf the net some one will come along!! Spread the word folks .

No I want to change channel 1 from 145.000MHz to another frequency. I know how to delete channels but I can not delete or change channel 1. There is a note on page 35 of the manual that states "Note that memory channel 1 may not be deleted, as it is the priority channel." I can't seem to figure it out.

The jokes never end....

My shell...:
A man went to his mate's fancy dress party with nothing but a naked girl on his back. "So what the hell are you supposed to be?"the host asked.
"I'm a snail," the man replied.
"What a load of rubbish!" the host spat. "How can you be a snail when all you've got is that naked girl on your back?"
"That's not a naked girl, mate," the bloke replied, "that's Michelle."

Uri;

VERY fine antenna, I have the FT-847 here in the shack, and the FT-100
in the car...
YES, This antenna will work with other radios, I used it with the IC-706
that has been
set in the other room for a spare/OM's radio.. This is a site for a
tuner you might look into
if your not using the Yaesu's...
http://www.amateurcommunications.com/Products/ATas100/atas100.html
Good luck, The antenna is a bit pricy, but I'm getting another one in
Dayton this weekend
This is the second. I got the first FREE with the FT-847...I figure the
second is 50% off...

I just picked up a bunch of used radio equipment from my FD Employer. Its all VHF mostly Motorola Syntor X systems. The Motorola I am familiar with and will be donating them for repeaters to my county ham club.

The Midland has me stumped, it has no SN or Model number I will put a pic up on the web at the following url

www.rcaviators.com/radio.jpg

Maybe someone can give me some input on this radio.

Thanks Craig

Source record: 79293

Help! Just installed a 706 MIIG in my new
Lincoln Continental. grounded the antenna mount,
trunk, at 180 tuner, and rig together and to the
chassis with half inch tinned braid.
Using an outbacker antenna and matched the SWR.
The noise when the car is running is really bad.
S-7 to S-8! Its not coming through the power line,
because it disappears when I disconnect the
antenna. Any hints would be greatly appreciated.
Thanks,
Sam

They are showing a rig that's HF, 6M, 2M, 440, and 1296.
(damifino what antenna you're supposed to use :)
100W on the low end, down to 30 IIRC on the top, all modes
everywhere.

No price yet, available "soon". (Soon means "soon") according to Mr
Kenwood)

This is a great scanner and general coverage radio.
It receives continuos coverage from 100 Khz to 2 Ghz (including cell
bands).
It is in need of a minor repair. The crystal needs to be resoldiered to
the circuit board.
I could do it myself. But, I am too afraid that I will ruin it.
I have software for it to work with a Mac.

>wanting to start over small.

The best place to start is to sign up for the QRP-L list and post
your question there. I am sure there is a qrper there that is very familiar
with the rig you describe, no question ever seems to be unanswered, although
most answers will come via private email. All the latest information
concerning qrp radios (new and old) and building various kits can be had from
the individuals on that list. One of the most exciting kits recently announced
is the "Elecraft K1", a smaller, two bander version of their famous K2 all
bander.

You can sign up for the the qrpl-l list or look through the archives at
http://www.qth.net QTH.NET has most of the ham related email lists
on line, so you can browse many different catagories.

Another good site is http://www.qrparci.org they have various qrp links

good luck,

joe

The DJ-480 had a surface mount 0 ohm jumper "resistor" that needed to be replaced or removed, & that would "lock" it into a "commercial" channel only display mode, or bring it back to Freq display & amateur mode. If you feel you are handy enough to open the radio & fix it , a quick call to Alinco will give you the location & part # you need to deal with.

I have heard many FT 1000MP owners with nice well-rounded transmit audio. In many cases they have extremely good bass response. I have heard that this kind of audio can be achieved by adjusting settings in the hidden menus as well as the normal menus. Are there any 1000MP owners out there that can offer suggestions as to the best settings in order to get this nice full audio sound. I find audio like that is very comfortable to listen to when conditions are good. Of course I would reconfigure for a narrower sound when working DX. Thanks in advance for any advice.

Don N2DY

I'm amazed by the number of posters who don't have either radios in
question.... If someone asks for opinions about specific equipment,
DON'T REPLY if you don't have them or have second-hand experience with
them!

I have a Pegasus, and love it. The Kachina has better receiver specs,
but as you've seen in at least one of the above posts, they seem to
have problems in other areas. FWIW, I *do not* have actual experience
with the Kachina <g>...

Alright, perhaps I should have been more clear, and maybe it's not quite
THAT crazy, but hanging around the low end scanner crowd at school tends
to inflate one's radio ego. According to the mod on QRZ, the coverage is
100-200, 330-500, and 896-1000 MHz, but I have noted occasional spots where
the PLL loses lock (mainly on the higher frequencies).

Hi,
For sale the following items:

1. GE Mastr Pro UHF repeater. Complete with cabinet, test meters, 300W duplexer, 45W output, lots of extra (backup/spare) parts....enough to make at least two, possibly three more repeaters. Tubes, crystals, etc. Currently on ham bands and on the air.
You take over my frequency -- no problem.
Simple diode programmable cw ider too.

2. Motorola UHF MSY repeater with 60W amplifier. Control cards including ctcss, squelch, repeater audio mixing, etc. With 50W Sinclair flatpak duplexer. With tune up book too. Now on 461 GMRS, will retune to ham bands. Saw very light duty. Good condition. Was taken out of service and worked perfectly and stored in my heated garage since then.

3. RCA UHF repeater. Unknown model. Condition unknown but rx and tx seem to work fine.

4. VHF + UHF Comet GP-6 repeater antenna. Brand new. Never used.

Price for all: $550 (both sets of duplexers
and antenna alone are worth that much) or trade for ????

Thanks,
Joe

Power supplies of 30V or of variable voltage are not that expensive or hard to find. Nor are DC voltage converters.

Many things will continue to operate at 12V. There will power supplied for various driver as well as oem equipment. Higher voltages will not only supply higher power but higher efficiency. Consider the applications in alternative power as well. For my own part, I know that it will aid in the application of new different sources of both interior and exterior auto lighting as well. Don't sweat the small stuff. Your lighter outlet will not go away.

Wow....EXTRA Class test question!

How many ohms do we put in parallel with the 20M ohm meter so it acts
like 10M ohms to calibrate the high voltage probe?

(Hint: Two 20M ohm resistors in PARALLEL equals 10M ohms.)

Hello, I am looking for some help in identifying a radio. This radio was made by GE. It is in a large metal box with a rack inside. About 3 feet or so wide x 3.5 feet or so tall x and about 1.5 feet deep. It has a remote DC head (this is what a guy here called it) with a desk microphone. This is not a mobile rig. Originally it was used for business freqs around the 6 meter band. There are 4 invidual units mounted on the rack in the box. The top unit is the transmitter and contains 3 tubes along with one xtal and various parts. the next unit appears to be nothing but an amplifier. There are 4 transistors in it and a cooling fan. The third unit is the reciever and really dosen't have very much to see. There is a copper sheild that covers most of the contents of this unit with a few holes in it for tuning. The last unit is really just a control board. There are two relays and a view power switches on it. On the back side of the rack is a board with 4 large paper capacitors and several 1 watt resistors.

The information I have gotten off the box is as follows

General Electric

Station Comb: DM74RAW33
Transmitter Type et-s5-8

Made in Lynchburg VA USA

I think I heard that it might be a GE MASTR series, but i do not know if this is correct or not. Thanks for any help. If you need more information or pictures let me know and I can get you some more information.

I also have a RCA model CMLL4MMB mobile radio that i am looking for information on. This radio has a remote mount head. It is only one freq although it has a place for 3 more in the rcvr section. This was a UHF business radio.

Any information on either radio including user manuals and schematics are welcome. thanks

5626. SW and MW toast on my Grundig YB500

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-22 00:00:00 UTC
From: "Sean P. Doyle" <sdoyle@nwlink.com>
Message-ID: <3u0kiss538re4ocbj05t7apqb194aqcvg8@4ax.com>
Source record: 78979

I have a Yacht Boy 500 that won't receive MW and SW properly. There is a constant high pitched hum on all but FM. Apparently my children plugged the AC adapter into one of the jacks on side other than the power port. Any ideas of what I can do to fix this? FM works great, but I would like to use it to receive MW and SW again. I don't mind opening it up (I have had it for 6 years) and I do know how to soldier but I am pretty ignorant of component level troubleshooting.

Thanks
Sean P. Doyle

5627. ICOM IC-3230H mic gain setting?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-22 00:00:00 UTC
From: Bruce Ussery <bruceussery@hotmail.com>
Message-ID: <392a018d@linux-1.rcis.net>
Source record: 78980

I've had this ICOM 3230H 2 mtr/440 transceiver for several years, used it very little, and it has this one little annoyance. I think the mic gain was factory set too low. It will deviate 5 khz if you yell in the mic, but speaking in a normal voice it's just way too low. I've pulled the covers; there are a few pots, but of course not labeled. Will I have to buy a service manual just to crank up the gain a little?
Any ideas welcome, short of turning the pots randomly. (I did try the pots inside the mic, after marking their position carefully- I only succeeded in adjusting the DTMF tone level.)

thanks,
Bruce

I would suggest sending it again, certified mail. An alternative would be to register on their "on-line" system (ULS). It's much quicker and you know it got there.

We bought two IC2100H this spring at Timonium. I think http://www.deverradio.com had them for about $179.00. Both seem to be working well. I did have trouble with a defective fuse link in the power cord - it was an intermittent problem, couldn't tell by looking at it because the fuse link looked good, but the solder was broke loose on the one end and from the vibration and bumps in the car, it would occassionally shut off and come back on. It took several days to find it, never saw that happen before - would make an excellant "bug" for a class, a fuse that looks good but isn't.

Both radios needed total isolation fromt he car body to work without any noise. We are using mag mount antennas, so that was no problem - (once we realized what was wrong). This is more of a problem with the particular vehicles rather than radios, but keep it in mind when you install what radio you get.

The only real problem we have is I lost the registration card, so I can't send it in.

good luck

Isn't it funny how we go around in circles. Even with a remote power supply I am
always interested in new (old) ideas. Just as in the past I will look forward to see
the specifications on this radio. Is it still a quad conversion receiver?
Not to change the subject but did they happen to introduce a new scope?
It seems as if in some ways hams being responsible for the proper operation of
their stations has been forgotten about. What better way than being able to
monitor your own signal. What else was introduced, anything? So far as I
can see the only thing that has been mentioned so far is the new 1000.

I did try that, but it didn't seem to help. I've tried using Buxterm and Logger, and I don't see anything in either one.

What should the "Tune" LEDs be doing when I power on the unit?

Does this unit use a "normal" serial cable, like I would use for an external modem?

I've ordered the manual from MFJ, which I'm sure will answer alot of my questions. I still appreciate any help you can give me, though.

A high voltage probe is nothing more than a large value resistor that will withstand the high voltage. It is used to make a voltage divider based on the input resistance of the meter. If you use a 20 Mohm input meter, then the probe will work but read approximately twice what the value of voltage is. For a typical 100:1 divider, the meter input resistance is 10 Meg, the probe resistance is 990 Meg. This adds up to 1000 Meg to 10 Meg, or 100 to 1. The same probe in a 20 Meg meter ends up with 1010 Meg to 20 Meg or approximately 50 to 1.

The common input for multimeters is 20K ohms per volt. The only meters with higher input resistance are those that have internal amplifying electronics. If it's an analog meter, then it's probably 20 K. Look on the meter face, it is sometimes stated there.

**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

I feel I should comment here to inject a word of safety. While
technically correct that a high voltage probe is nothing more than a
large value resistor, there are some other design considerations
which must be considered. Firstly, the insulation on the probe must
be able to withstand the voltages being measured. It's no fun to
have a flashover occur while you're holding the probe on a 30KV
circuit. Don't forget, too, that probes may get dirty or wet, and
that this can significantly reduce their voltage handling capacity.

Nextly, the high value resistor must be able to take the voltage
applied to it. Not all resistors can withstand high voltages, and
they may flashover or breakdown. If this occurs, the minimum damage
you can expect is to fry the meter (Worst case might be frying
yourself!). The power handling capability of the resistor probably
won't be a problem, but it would be good engineering practice to

work the equations to make sure of this.

Another concern involves the switching of the meter. If you're using an older style meter with a mechanical switch, what happens when you operate the switch? Is the input disconnected from one contact before making with another contact? What will be the voltage on the switch when the contacts break? Will this cause the switch to arc over?

Finally, if you're going to be measuring AC voltages with the probe, you'll have to consider the aspect of any capacitance associated with the meter, leads, or probes. 1000M of resistance can result in a significant RC circuit.

So, before attempting to construct your own high voltage probe, please spend a few minutes considering the failure modes possible and the consequences.

Dave

P.S. Standard Disclaimer: I work for them, but I don't speak for them.

5650. IC 746 vs. FT 847

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-22 00:00:00 UTC
From: A 'n' A <saciuk@freenet.edmonton.ab.ca>
Message-ID: <39295B9C.8337638A@freenet.edmonton.ab.ca>
Source record: 79137

Hello!

I was doing some price/feature shopping, and found the IC-746 and Yaesu's FT-847 to be similar. I want a transciever that can do HF, 6m, and 2m. Anyone owned/operated either? Both? Any Pros & Cons would be helpful for deciding. This will be my first radio, as I am fairly new to the hobby. Thanks!

Andrew

For Sale: Motorola Minitor 1 Charger/Amplifier - NR!!

ITEM IS UP FOR AUCTION AT:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=334953624

The Motorola charger is a single-unit battery carger/amplifier for the Motorola Minitor Alert Monitor Receivers which use nickel-cadium batteries. This unit will recharge nickel-cadium batteries either separatly, or while installed in the Minitor Alert Monitor. Two separate charging components permit both spare batteries, and batteries installed in the Minitor to be simultaneously charged. This unit contains a 2.5 watt audio amplifier and speaker, a rectifier and a series-pass voltage regulator in addition to the battery charging circuit. Also the unit has an external antenna input jack to improve area reception.The charger also has slotted holes on the bottom of the unit for wall- mounting. This unit is in excellent shape (9 out of 10 cosmetically). I just purchased it on eBay last week, not realizing it was for a Minitor 1, and I have a Minitor 2. Please email with any questions. Good luck, and thanks for looking!

Uri;
The Antenna seems to work pretty fair on the trunk lip of the car.
On the roof of the house I used the ATBK-100 (Ground Radial Kit).
On the roof here, It was a fair antenna, Iv'e had better. But, If your
limmited for space or "NO ANTENNA" Zone, This is great... I was
at the Hamvention in Dayton Ohio, and Saw alot of the ATAS-100
antennas in the parking lots.. This tells me somthing, and This is one
of the reasons I was there..First to get a second antenna and to get a
mount for the car. ATAS-100's were sold out a hour after I got mine,
and was offered more for mine (I could have made money this time,
insted of spending it all).. Remember, I have the advantage of using
the Radio's this was designed to work with also! I have the TUNER
functions built in for the ATAS-100... If you got lots of room, or no
restrictions, I might go with something else, But if Size is a controling
factor, I think it works well on UHF/VHF and HF.. I use 1 (One)
Antenna for the Car now, not 2 or 3.... Good Luck, Making the choice..

Depending on your voice....First off set your md-100 mic (assuming you
have that one) the the "THRU" position. And try these sets. They work
for me.
FT1000MP Menu sets used by W4NTI.

2-9 autonotch (for carrier ellimination, ssb)
must be out for cw, use IF Notch on cw.

4-4 Tx EDSP, set to 4. (You may need to '
play with this for your voice).

4-5 SSB Lpf 3200
SSB Hpf 100
A1 Bpf 60 for digging, 120 for
normal.
A3 Lpf 3200 (default)
A3 Hpf 100 (default)
dig fil PKT (default)

7-1 Keyer Dot 10

7-2 tyr Dash 35

7-5 Keyer Bk-In .18 to .26 (amp drop out)

7-7 SSB r 100-3100 Adds RX Bass
SSB t 200-3100 Adds TX Bass
cu-r on (default)
An-r on(default)

8-2 Split operation nor(default)

8-4 Front end RF amp Flat for all band
operation/ Tuned for
ham bands only.
I use tuned mostly.

8-9 r-LSB carrier -0.000
t-LSB -0.100
Proc-LSB -0.050
r-USB carrier -0.000
t-USB -0.100
Proc-USB -0.050
t-A3-car -1.080

Here is how to get to the "hidden menue". When
you bring it up, record EVERY setting in case you
mistakenly change something.

With radio in OFF position. Push "FAST and LOCK", then POWER ON.
Release buttons. Select
normal menue by pushing FAST and ENTER. Dial
up past 8-9 and there is menue 9.

To make radio xcve everywhere go to 9-9 and
select GEN.

To vary IF rx Gain, go to 9-1. I raised mine from 10
to 12.

Hope this get's you started and have fun.

POWER on SETTINGS

28 + POWER Resets ALL menu settings to factory default.

SUB + ENT + POWER Resets ALL memories (except menu settings)
to factory defaults.

SUB + 29 + POWER CPU Master reset for ALL memories and menu settings.

Dan/W4NTI

Love my FT-2500. Ran it in the mobile for a long time until I replaced it
with a dual-bander. Didn't have as much of a problem with it getting swapped
near the paging transmitter sites like the dual-bander does but the receiver
isn't as wide either.
Can't speak about the Icom.

5675. ICOM: FL-103 or FL-223 for SSB?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-23 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <20000523105910.04135.00000703@ng-fd1.aol.com>
Source record: 78812

Hello Folks,

I have an ICOM 706MKII that has no filters installed. I would like to add a SSB filter to help with QRM. I have the DSP installed but feel the filter would perform better. Is the FL-103 too wide? The FL-223 too narrow? I would like to see your comments as to which is the perfered filter...

Thank you all and 73!

Jason S. Hulet

5676. Wanted: Collins Filter for Yaesu FT-900

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-23 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <20000523110534.04121.00000855@ng-fd1.aol.com>
Source record: 78813

Hello,

I have a Yaesu FT-900/AT without the Collins filter... Do you have one for sale and what is it called as far as model number?

Anyone have any other suggestions for this rig?

Thanks to all and 73!

Jason S. Hulet

I must have gone to a different hamvention. I packed the back of an
explorer with great deals, and still came home with $$$ in pocket.
Got a lot of things I've been hunting, and some others that just
jumped into my cart, I swear :)

Of course, with the restructuring, demand for HF rigs is up, and the
prices on them seemed a bit higher than normal. What would you
expect?

Can't help put my 2 cents input here. I agree that the fleamarket was a bust. This was my first trip to Dayton...and I guess i was expecting good prices in the fleamarket because of all the sellers. I believe it went the other way, the sellers were depending on the 30,000 crowd to pay the high prices. If you were looking for old test gear or "junk" there were bargains to be found. If you were looking for HF gear in good shape...you left disappointed. I did love the new equipment displays..but better deals are to be found on Ebay than at Dayton. (and that's sad)

Just another thought...de K0FL

5686. IC-706MKIIG dead on 6m

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-23 00:00:00 UTC
From: Robert Joshua Chen <rjchen@Stanford.EDU>
Message-ID: <8geeu7$o9h$1@nntp.Stanford.EDU>
Source record: 78823

I recently purchased a 706MKIIG about two months ago and have been slowly working on building up an antenna farm on my balcony. Yesterday, I finally put up a 6m loop and was looking forward to hearing what the band sounds like. Lo and behold, I could hear nothing. I tried testing the SWR to fine-tune the antenna. Couldn't, because the radio seemed not to have any output power whatsoever on the band. Put in dummy a load. Still no transmit power in all power ranges. All other bands are fine. This is the first time I've used the 6m band on the radio since I got it.

What's more disturbing is that the background noise quality does not change at all when I switch in the 6m loop. Usually I get more noise or the audio changes slightly. Here, nothing. Seems like the receive is dead along with transmit.

So, has anyone else had this particular problem? Am I doing something wrong? Do I need to send it in for repair (argh)?

Thanks,
-Robert

I'm looking to part with my last HP200LX for a PalmV....
I need the Second Palm for Mobile APRS & Digital Communication.
I have a MINT condition Double Speed, 8 MEG, HP200LX.
Extras include All the software, Case, 1414 LXM 14.4 Modem/4Meg Flash
Original Books, ACT! for HP, PC in your pocket book, You'd have to see
this!
The Hinge is great, latch is still stiff, This was my pride and joy!
I've been working with My County and developing Ham Radio communications

like APRS (Automatic Position Reporting System), and have been using
Windows,
and PalmOs.. Just not using the HP200LX, and have the Palm all the
time..Just that
simple.. I"m going to dedicate a PalmV for Radio Communications...
If you have a PalmV with or W/O Extras, and need a HP200... Drop me a
line..
I have all the connectors for PalmV already, If you have a III, w/Serial
connectors, this would be acceptable..

The FCC has been overloaded a bit with all the upgrading going on. I sent in a Form 605 with an address change and just received the new license a few days ago. This was about a month after I had sent in the form.

The changes show up in the FCC's data base on www.fcc.gov/wtb a week or more before you will receive anything in the mail. www.qrz.com seems to get pretty timely updates of this.

5690. DAVCO DR-30

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-23 00:00:00 UTC
From: Jim Jerzycke <kq6ea@pacbell.net>
Message-ID: <392AC6EB.79470FAE@pacbell.net>
Source record: 78827

Hello all! I recently purchased a DAVCO Model DR-30 at my radio club's auction, and I'm trying to find some replacement knobs for it. The main tuning knob (large, fluted cast pot-metal with a red arrow pointer) looks like it may have come from a National or maybe a Hammerlund, but I'm not sure. I've been to most of the "Vintage Radio" sites I found on Yahoo!, but I can't seem to find any knobs other than bakelite/phenolic knobs for Crosby's and the like.
Does anybody know of a good source for big metal knobs, or a site that has pictures of 50's-60's radios so I can at least find what the knob came from? I KNOW I've seen this type of knob before, but can't remember what brand of radio it was on. The Davco page at www.collinsmuseum.com show an older version of what I have, but it appears to have plastic Harry-Davies knobs on it.
Thanks, es 73 Jim KQ6EA

I must respectfully disagree. I sold all of my stuff before 11:00AM on
Friday (maybe my prices were too low!), and came home with a
restorable Drake 4-Line station ($160) and a "collector-quality"
Hammarlund SP-400, speaker, and power supply ($175). The dealer prices
were excellent. I, too, took cash home, depite my best efforts. I'd
rate this Dayton as the second best of the nine I have attended
(superseded only by the 1999 event).

I'm looking forward to Dayton 2001!

73,

Tony W8HRO

Well sellers can dream on. I saw a Realistic HTX-404 in the box for
$175.00??? What a joke! It was over 5 years old and the battery pack
needed rebuilding!! He was a two-way dealer. They are USUALLY the worst
for pricing things too high. I got a NLS Miniscope 230 working in good
condition with the probes and carry case for $50.00 from a 2-way dealer.
GOOD BUY! This one is a classic. A guy was selling a folding tripod that
you would mount a Hamstick on for field day. He made them and was charging
$85.00. A few isles over someone else was selling one of his tripods for
$185.00!!! I kid you not.

5696. Wanted: FT200 schematic as GIF or JPG

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-23 00:00:00 UTC
From: Andrew <andrew@eightoseven.freeserve.co.uk>
Message-ID: <8gerf1$3c$1@news6.svr.pol.co.uk>
Source record: 78833

If anyone out there has both an FT200 schematic and a scanner and is prepared to take the time to scan it in and email it to me it would be much appreciated.

I bought the set at a rally and was promised the original manual in the post but it hasn't turned up. I'm hoping to sort the set's AGC system in time for a public event station this coming weekend. I guess this is short notice !

If anyone can help it would be much appreciated.

73,

Andrew

Hi Ken,

The 756Pro fan sounds a bit louder
than the original 756 I used to have,
more of a low whoosh that comes
on, sometimes while only receiving.
Guess heat from the display.
I don't get the feeling that the whole
radio is shuttering or grunting tho'.
Great radio.
Bennett ko2ok

As both a seller and a buyer, I was pleased with the flea market. Our tables had good prices and we sold out, and we had A LOT OF ITEMS, Friday afternoon. We filled the van for the return trip with bargains.

5700. I need help with temporary antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-23 00:00:00 UTC
From: n9yln@aol.com
Message-ID: <20000523175416.12363.00000765@ng-cf1.aol.com>
Source record: 78837

Hello!
I need a temporary antenna to set up when I go visit family. I was thinking of an Outbacker antenna and using it on their tripod. But I don't like the idea of having to run outside all the time in all types of weather just to change the tap and stinger every time I decide to change bands.I was also thinking of a random wire and antenna tuner but there is really no place to string one up at. Is there any other kind of antenna which would fit my needs?
Please email me with any suggestions and/or URLs for any other brand of antenna that might work. My email add. is: N9YLN@aol.com
Thanks in advance for your help in this matter!
73

Same opinion here as below. Did the 30 day bit last January (meaning; I tried it and sent it back). Not a bad little radio for the money.... but add in the monitor rf hash, hard drive hash..... and it gets pretty noisy. Is that the radio's fault? No. But it's an environment (computer being on) that it has to be in. Now put the faithful ol' 8877 into service and try to figure out if the rf is coming into the rig via the computer, the radio and so on. Bad enough trying to keep rf off the rig without hooking a pc into the mix. Try laying down 1500W on 20m to find out that rf just tickled the keyboard and now you're on 40m!!! The ol' 8877 doesn't care for that much!! Makes for an interesting Q....

The "virtual front panel" or tuning the "virtual radio" sucks!!! It's fun until the novelty wears off (about 3 days).

My advice: Buy a stand alone rig.....

I just bought a 2100 new at Dayton for $149. I compared the specs on KW, Yaesu, and the 2100, and even though I've been a lifelong member of the KW club, I stepped outside and bought the 2100. Specs, features, and a friend's experience with the intermod rejection sold me on it.

PS. The dealer I bought from was Ham Radio Outlet. I assume the $149 was a show special, but they should still have a good deal on it.

Good. I'm glad I wasn't the only one. My first trip as well, after 22 years of waiting. Wanted a DG-5 for my 520s, among other things. A thousand tables or so, not one freakin' piece! I could count the Kenwood gear on my fingers! I didn't find a single thing I was looking for, and I wasn't looking for anything out of the ordinary.

I was so disappointed. I couldn't believe that some of those people actually took the time to pack that garbage into a truck and drive it out there!!!!

5707. TS-520s cover repaint suggestions

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-23 00:00:00 UTC
From: nerdware_nospam@laidbak.com
Message-ID: <3930e66e.111028514@news.niia.net>
Source record: 78844

Through a series of unfortunate and unnoticed events (unnoticed until too late.....) the cover of my 520s has some paint missing in one area and started a little surface rust. I've steel-wooled the rust off, but I want to repaint the cover back to new.

Can I send the cover back to KW for repainting? Or is there a repair station that can do this for me? I'd even attempt it myself, if a match for the factory paint can be bought.

I'm really upset at this. I've taken good care of my baby since I bought it new as a Novice in '79, and I want to get it cleaned back up.

Thanks.

Paul

Unless you have something wrong with the coax you should hear some noise as you tune the band in the ssb position. It seems that here 6 meters has more junk signals such as computer noise and birdies from other devices than almost any other band. Have you tried just tuning up and down out of the 6 meter band to see on what frequency the noise starts to come back in ? I would think you should be able to measure power into a dummy load.

An auto body repair shop should be able to fix you right up. They can match the color to the color inside the case and get it pretty exact. Have the bottom half repainted, too, so it is sure to match. It has probably changed color some after all these years.

i would not hesitate personally.
i blew the 6m pin diode out on my 706 mark none and sent it in.
5 working days later i had my rig back from icom.
under warranty and no charge other than my cost to ship it to them.
never a problem afterward.

my experience.

I didn't get to go this year! WAA! Just because my daughter was graduating from college! (I'm kidding. I wouldn't have missed that for the world) I like sticking around till Sunday. There are years you can shoot a cannon down an isle and not hit anybody. But, it's fun checking out the sundown material!

This is a fine radio has alot of goods I love it it has 160
modes/channels the radio orginally cost me 2,000 but the CONTROL HEAD
JUST BURNED OUT.radio works fine with the control head from my other
unit there for I deducted 1,100 dollars of off of the orginal price I
paid for it this means you only pay 900.00 or you can give one of these
uhf radios with 450-470 mhz in there band split (VISAR HT1250 HT1550)
and pay only 500.00

ps I will send you the bad control head to!

Sent via Deja.com http://www.deja.com/

From: Robert Joshua Chen <rjchen@Stanford.EDU>
Message-ID: <8gclu2qor1@nntp.Stanford.EDU>
Source record: 78985

I'd like to get either an AEA Isoloop or MFJ HF loop antenna (MFJ-1786 or MFJ-1788), but can't seem to find any retailer with any inventory on these. MFJ themselves are back-ordered for at least 6 weeks. Does anyone know of a source that has either of these in stock?

Thanks,
-Robert

Well excuussseeee me. The man said Kachina or Pegasus __or___(neither one)

I offered something based on using a computer to control my radio, which is
neither a Kachina or a Pegasus but is an __or__(neither one).

I'll wager that everyone that you are castigating who doesn't have a Kachina or
Pegasus actually has ***neither one***!

I simply pointed out that radios without knobs are a pain in the ass which
Tentec is now apparently recognizing, based on recent news.

Of course, radios without knobs are not the only pains in the ass in amateur
radio.

Source record: 78858

I called Icom today, and the tech person diagnosed the problem as a short in the bandpass filter on that band--which, he says, would explain the no-transmit, no-receive problem. This would also explain why the rest of the HF bands are perfectly fine.

I'm really hesitant to send the radio in though. I've heard some horror stories of how slow the Icom repair turnaround is, and how the radio might even work worse afterward. I was wondering if this short sounds like something that can be fixed by a somewhat non-techie person like myself, who has had soldering/desoldering experience, etc. Or should I just bite the bullet and send it in?

5743. RE: Yaesu FT 310AD, signs of water damage

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-24 00:00:00 UTC
From: joet@bellsouth.net
Message-ID: <e_HW4.5269$kx3.761173@news2.mia>
Source record: 78867

Hello Everybody,
Recently I was given an Yaesu FT 310AD that was just sitting in a friends shed. As I torn into it, the signs of water damage were quit obvious. I'm always into a challenge, so I intend on breaking the unit down and sand blasting all the enclosure and chassis panels that have been oxidized.

The water damage is concentrated on the front and rear of the unit. The majority of the circuit boards seem to be in pretty good shape for the exception of the LED driver board where corrosion has tarnished some of the lands on the board and pins on the TTL chips and discrete components.

I need to find out if this unit operates solely from a DC power source and if so, what is the voltage?
And of course if anyone has a copy of the schematic or service manual they wouldn't mind sharing, please let me know.

Thank you all for your kind attention.

Joe Tuero

Its more than likely RF getting into the mic cord. Had that problem, when I used the rig with the remote kit, works fine either way with the faceplate on, at least here.

I used TM-742A (also owned V7A but not recommed it if you are in crowded area) and use Motorola GP-68!
Yaesu V5R also works find but the reception is not as clear as GP-68.

The beauty of 742A is the separate antenna, so you can individually match it! (and the selectivity is superb).
But you have to add CTCSS board to prevent anybody else activate this 'repeater'...

forget the junk down there best offer taken

This is a fine radio has alot of goods I love it it has 160
modes/channels the radio orginally cost me 2,000 but the CONTROL HEAD
JUST BURNED OUT.radio works fine with the control head from my other
unit there for I deducted 1,100 dollars of off of the orginal price I
paid for it this means you only pay 900.00 or you can give one of these
uhf radios with 450-470 mhz in there band split (VISAR HT1250 HT1550)
and pay only 500.00

ps I will send you the bad control head to!

DITTO.....And you are quite right , I bought 3 Hand Held DMM's out in the back for $10.00 each. They were new but of course they were "off brand" and she had about 500 of them. But OK for the Car , Boat , whatever. The thing that got me was all the "Flea Market" people who ran over and bought them by the stacks and then put them with their "junk" on their tables and tried to pawn them off for $20.00 and up!!! Whats the deal here? I walked around out back for about 1/2 a day but found it much more appealing to be inside with the vendors. I think the sum up of this chat is that the "Flea Market" people just like carting their junk around from fest to fest.In all honesty , I did see some "junk" that was in Orlando at it's ham fest last year. Used radios were only a few percent lower than the cost of new ones and were in the sun all day as well as filthy. I would like to say that the hot dogs were good at the barbeque place though....

5754. HF in an appartment any problems?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-24 00:00:00 UTC
From: Ryan Stapleton <ryan@bluewizard.net>
Message-ID: <392BBAE3.1C77F6DB@bluewizard.net>
Source record: 78878

Hello,
I am thinking of purchasing an HF radio (I am not sure what one yet.
Whats a good used one?)

Also I am looking at a Perth Outbacker ant, I think that is what it is
called. I live in an apartment building with a balcony (I am planning
on putting it in a flowerpot'ish thing on my balcony)

Am I going to really anony my neighbors? Or should I pretty much table

that idea till some point
when I can buy a town house or a house of some kind?

Thanks
-Ryan (KA3WUT)

5756. FT-90 Mic Pin Out

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-24 00:00:00 UTC
From: David Cole <dlcole@ibm.net>
Message-ID: <8ggokd$c03$1@nnrp1.deja.com>
Source record: 78880

I am trying to adapt the FT-90R for use on my motorcycle. However, the RJ-12 plug pinout layout has got me stumped. I have tried the 1200 baud packet wiring that is shown in the Users Manual, but when I press the PTT, the display shows *PACKET*...not exactly what I need. The problem seems to be with pins 1 and 6 which are described as *multi-function* and can change depending upon other unknown factors.

Without taking the microphone apart, can someone send me the pins I need for Mic Audio and Mic PTT? I think Audio if 4 & 5 and PTT is 4 & 6, but this combination doesn't seem to work...

Thanks.

One thing is for sure, with people trying to sell used garbage (dirty, abused and scratched up) radios for 10% under the price of the same radio new....well fleamarket vendors....the new equipment vendors thank you from the bottom of their hearts!!!

If I am buying used stuff I expect it to be in good condition and be half of what I can buy it new....if not...well I just buy new. Then I get a warranty and the equipment looks nice, just like the way I treat my equipment.

Hello..

Is it possible to purchase laser printer/ink jet printer paper that will allow one make your own ' rub-on ' letters/numbers? I've seen the type where the plastic is affixed to a sticky back (like sctoch tape) but I was wondering if this rub on stuff is available.

Also, I would appreciate if someone would explain how artwork stencils are made so that one can airbrush panel labels, etc??
Thanks - Jim

I have a Micor Base converted a repeater.
All ready to go on 146.700/146.100 .
It has a 100w solid state final, with output turned down to 50w
for better repeater operation.
It has new helical filters on front end installed,
and retuned by local Motorola tech on the 2m band for full
sensitivity on 2 meters.
It comes with the service manual.

It comes with a Scom 7k controller,
with all options, including pl, and auto patch.
The scom 7k comes with the user manual,
and windows programming software.

The duplexers are made by Telewave.

Model numbers are as follows;
Motorola Micor) 893RCB-3145B-RH52
Telewave duplexers) TPRD1556
Scom 7k controller

Please, serious inquiries only.

> take it? Thanks Murray

Unless you have the FT-100, you can't tune the antenna as is sends the power for the srewdriver motor down the coax and will only stop when the FT-100 sees low enough SWR. You would have to build a rectification circuit to power the antenna with out powering the antenna output of the radio and then watch an SWR meter to know when to stop.

I have formulated three criteria for buying at a hamfest. All three
rules are based on the assumption that, except for simple components,
all equipment at a hamfest does not work:

Rule 1-
Buy it if it's so cheap that you won't feel bad if it ends up on Monday
night on the curb with the rest of the household garbage. It's kinda
like buying a lottery ticket - you know every ticket is a loser, but the
chance that it might be a winner makes it worth throwing away a dollar.

Example: I bought a 15 inch SVGA monitor for $5 to replace a monochrome
tube on computer #4. It works fine.

Rule 2-

Buy it if the price is right and you are confident of your ability to fix it. If you are technically inept, you can't use this rule to justify a purchase.

Example: I bought three beater Tektronix oscilloscopes for a total of $65. I sold two immediately and recovered my costs plus $15. The last scope will get benched this weekend. If it lites up, I'll check it out and give it to a neighborhood high school kid with no money that has been lusting for a real lab-grade scope.

Rule 3-
Buy it if it has some intrinsic value other than its obvious use. Again, technical ineptitude voids this rule.

Example: I bought a stack of old laptops for prices ranging from $10 to $25 each, expecting some to fire up and others to be DOA. Sure 'nuf, half have life, half are scrap. The ones with life I'll refurbish and either give to the kids for schoolwork or resell. From the dead ones I'll easily recover the purchase price in parts, subassemblies, and batteries ($10 for a Compaq battery is a bargain compared to retail).

Example: Remember those two scopes I sold? One of them went to a fellow who needed it to figure out how to reassemble a similar unit that he was repairing. He got both a template and a bunch o' repair parts for a very nominal cost.

The best deal of the weekend was the three Motorola 100W VHF Syntor radios I found abandoned on Sunday morning. The insides of all three drawers are clean. A little bastardization of the control board to reprogram them onto 2M and a little work to move the VCO and I'll have three fine radios to swap into existing mobile installations.

I went inside at Dayton all three days - to take a pee and to turn in my ticket stub. Why should I go to Dayton to pay full price and blOhio sales tax for the same stuff that I can get from a catalog or web-site? Where's the adventure in opening a box and plugging into the wall?

If you are an appliance op, don't bother with the flea market or any hamfest.

If you aren't willing to take a chance, stay home.

If you not interested in teaching yourself something new, buy from a catalog.

As for getting great gear at 50% off? - the only time that happens is when the seller is absolutely clueless about what he has. And that doesn't happen often. And I still assume it doesn't work.

I guess your Dayton experience really depends on your expectations and your attitude.

Greetings,

I have for sale a Yaesu 736 all-mode uhf/vhf/satellite receiver.

I have used it for satellite work including AO-16, LU-19, WO-18, UO-22, KO-23, KO-25, AO-21, UO-14, FO-20, FO-29, RS 10/11, RS 12/13, mir & SAREX.

It includes 2 meter, 440Mhz, mic, manual, power cord, & original box. It has a 9600 baud data port already installed as well as a 1200 baud data port.

It is in great shape with one scratch on the bottom. The unit was checked out by Amateur Electronic Supply last summer and given a good bill of health.

Asking $775 plus shipping & insurance if buyer desires. Will ship to contiguous 48 US states.

contact me at gsimms@fgi.net if interested.

I am back from Dayton with a beautiful HP 5255A plug-in.
I hope I can use it in front of my valorous Tek 7L12
spectrum analyzer to see the 10 GHz band !

I am looking for the pinout of the Centronics like
connector before trying anything.

This plug-in seems done for a 5245L/M or 5247L/M or 5248
analyzer.

Thank you for any relevant URL or diagram.

Hi, I have a "dead" TS930SAT and have been advised that the fault is likely to lie with some zener diodes and
their assoicated 2 watt resistors: R7 R8 R9 R10 D6 D7 D8. My problem? (how long have you got) but the problem
with the rig ! I can't locate the components in the rig!

The schematic shows the components near to the Digital Unit, but I've removed that and at the board beneath that
and at the main board underneath the rig, and at the power supply board beside the mains transformer, but I've
still not found the ******* things, the 2watt resistors should be very obvious.... can anyone out there help pls?

I really want to get this rig back on the air as it has all filters and the atu and works brilliantly on CW, I was hoping
to have it ready for WPX this weekend but I don't think thats going to happen.

I just purchased a new O'scope and it's time to pass along my loved and venerable Tektronix 7603 100 MHz frame and plug-ins. The scope is

in working condition, a few scratches on the case but overall in good shape.

7603 frame (wi/readout... this is a Holland made Tek)
7B53A time base plug-in
2 ea 7A26 dual 200 MHz vertical amp plug-ins
Original manuals
2 ea new Avex X10 100 MHz probes
Extra 7603 frame for parts
Model 3 or was it 5 Tek (?) lab cart with drawer and scope lock. Can hold scope on top tilting base, other instruments like a TM504 on second shelf and has a large drawer on bottom..... wheeled.

Asking $375 for all..... u-haul. Near Oshkosh, Wisconsin. Scope has not been calibrated.... but then who needs that <grin>. If interested

e-mail me off list. I'd rather pick-up but you pay shipping if you want it shipped.

Thanks, es 73 de Mike Melland, W9WIS

I sent my new 706MKIIG in to ICOM to have the high stability crystal unit installed, and the 1.9KHz SSB filter. ICOM installed the options, calibrated the reference oscillator (new crystal unit), installed any late edition factory mods if any, tested the rig to spec's, and installed the filter, all free of charge. The rig was back in my hands about 1 1/2 weeks after they got it, and it was shipped back to me UPS ground at ICOM's expense. It works just fine.

5792. Wanted: Collins Filter for Yaesu FT-900

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-24 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <20000524192225.18603.00000080@ng-cq1.aol.com>
Source record: 78916

Hello,

I have a Yaesu FT-900/AT without the Collins filter... Do you have one for sale and what is it called as far as model number?

Anyone have any other suggestions for this rig?

Thanks to all and 73!

Jason S. Hulet

5794. Wanted: ICOM FL-103 or FL-223

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-24 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <20000524191746.18588.00000074@ng-cq1.aol.com>
Source record: 78918

Hello Folks,

I have an ICOM 706MKII that has no filters installed. I would like to add a SSB filter to help with QRM. I have the DSP installed but feel the filter would perform better. Is the FL-103 too wide? The FL-223 too narrow? I would like to see your comments as to which is the perfered filter...

Anyone have either for sale?

Thank you all and 73!

On a related topic - the QST Review of the 756Pro mentions the digital recording capabilities of the radio, but mentions the fact that the playback can't be transmitted "lest anyone be tempted" to do so (paraphrase). Why would this be a bad thing? I know that other radios have this feature, and I've had the opportunity to hear my own signals back from another station - neat! Is there a legality or an operating procedure problem with this?

FS: Kenwood TS140s, like new mic, and original boxes. No manual but
VERY simple to operate. This radio has less than one hour transmit time.
Would consider a very nice late model scanner in mint cond like a BC9000xlt,
a Yupi, Icom R2, or ??? in trade. No scratched items please. This rig
doesn't
have a scratch or mark on it. $500. I will include an Astron RS35A in mint
cond
for $575.

Hi All,

I thought it would be a breeze! I have been copying sigs for a week. Made a few partial QSOs with the hand mike! Tough typing and moving the rubber band on and off! sheessh, Cobbled up a cable with the 100:1 voltage drop 100 ohm to ground a 10K in series, to pins 11 hot, 2 ground of the accessory socket, wouldn't throw the VOX! Tried the TNC socket pins 1 hot 2 ground 3 PTT to a key. That started transmitting immediately wouldn't stop. What am I missing here? Is the VOX, triggered by anything but the mic inputs? Seems I am a candidate for a rigblaster, though I feel its over priced!

Thanks for any help you can give!
Ben, KF4KJF/ae

5801. Re: Need help setting up Icom 706G for PSK-31!

Hi Ben,
I have used my 706 for PSK31 and it works fine. The problem is that I haven't used it for about 8 months and I forgot what setup I used. I remember that I didn't use the vox because I couldn't get it to be reliable for keying the tx. Also turn off the rit if it is on.
Looking at the wires that I was using, it appears that I was using the rtty plug for the connections to the radio. The rtty audio output is at a fixed level so you don't have to adjust it with the volume control, and you can key the tx with a switch or the output from the serial port. [check the manual under rtty connections, I think I was using afsk].
Let me see if I can get it going again to see if I am right. Got to go to Lake Tahoe for a few days so it may be a while before I sort it out.
Hope this helps,
Randy kr6rc

These components are located inside the fan shroud, on the back of the PS
side of the rig. Take off the shroud, and you will find them mounted inside
it.
Anthony Roskilly wrote:
Hi, I have a "dead" TS930SAT and have been advised that the fault is likely
to lie with some zener diodes and
their assoicated 2 watt resistors: R7 R8 R9 R10 D6 D7 D8. My problem?
(how long have you got) but the problem
with the rig ! I can't locate the components in the rig!
The schematic shows the components near to the Digital Unit, but I've
removed that and at the board beneath that
and at the main board underneath the rig, and at the power supply board
beside the mains transformer, but I've
still not found the ******* things, the 2watt resistors should be very
obvious.... can anyone out there help pls?
I really want to get this rig back on the air as it has all filters and the
atu and works brilliantly on CW, I was hoping
to have it ready for WPX this weekend but I don't think thats going to
happen.

Source record: 78936

Shack Spring Cleaning List 5/24/00

All items are as is. Items will be listed as working or not. Most items I can supply digital photos of (or can take). Prefer payment to be US Postal, Bank or International Money Orders, checks are ok, but will hold up shipping until they clear the bank. Shipping is additional. Digital pictures can be supplied for most items. On with the list.......

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "bird brain" put a heaphone jack in the lower right corner of the rig (removed now). I carefully filled it and texture painted the patch job, which matches the original black texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4 empty coil forms, maybe 6..... made by a fellow in IN...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set. I used it with a little hombrew power supply that I wish to keep. Selling Price for the above $400 Prefer pickup, but will ship. OFFERS??

Military Spy Radio...GRC-109.....I have the 3 pieces, Transmitter T-784, Reciever R-1004 and Power Supply PS-2685. This rig works quite well. The reciever was aligned and is quite accurate. A manual comes with the unit. Selling price $300 Unit is heavy, but shippable.

AEA CP1....RTTY demodulator terminal unit. Not sure if it works, it was used with a C-64 on RTTY. It is clean and unfortunately I dont have the manual for it. Price: $25

Drake C-Line... R4-C, T4XC, MS-4 and AC-4 all interconnecting cables and manuals. no mic....160-10mtrs... Sherwood mods are in the R4-C, all xtal filters too. This is a great station, used it to work through RS-12 all the time....nice for split band operation...but I cant keep all these rigs.....hi Price: $545 I will throw in a new set of finals too. Prefer pickup, but will ship...heavy

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition...it does not appear to have been in a smoking enviroment....I dont smoke...so none of these rigs have been exposed while they have been staying here in the shack :-) This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $175

Morrow Twins with Homebrew Supply......The MB-560A and the MBR-5. The two rigs are joined together (by their feet), but can easily be separated. They work well and the supply easily powers them....it is a beast....hi A manual copy comes with the setup. I prefer pick up on this item, unless the Power supply is not wanted. Power supply is not shippable. Price either way is $325

Heath HG-10 VFO....Good condition, but could use a bit of tlc. I have never used this. It was purchased as a spare that was never needed....Price: $50

Harvey Wells "Z Match" ....this has a stock wattmeter/swr meter in it....nice condition. No manual. A rare unit. All original. Price: $165 (Holding)

Yaesu FRG-7 Shortwave Reciever....This unit has many of the "Gilfer" mods. Works ok but, could use a fresh alignment. (Can be tricky to lock the mhz, but it does lock.) Rig is clean and has great audio and accuracy. Manual comes with unit. "D" internal battery tray is NOT in the radio. Price: $175

Hallicrafters S-38.....Rough condition, rusty on the inside, but with "tlc" could be brought back, not working, but original right down to all of the capacitors from what I can see. Missing bottom cover, was cardboard I believe? Price $35

Heath HD-1418 Audio Filter, brown series....works ok , but speaker output low. Good condition. Comes with original manual. Price: $40

Drake Theta RTTY Terminal unit, Mint condx stand alone unit with a B/W monitor. Original manual. $215

Universal M-900 Shortwave Decoder with B/W monitor. All in excellent condition. With manual. This is a stand alone unit....no other computer needed $300

Heath SW-717 Shortwave Receiver.....excellent condition $135

Heath HR-1680 with the HS-1661 Speaker.....very good condition, Receiver works well and looks good too! Will not separate the pair. Manual included $215

Kenwood AT-200 Antenna Tuner good condition, manual included $150

Lampkin Freq Meter good condition, no book $35

Hello Anybody,

Is anybody aware of the problems with the new ft1500 2 meter
mobile? Mine went bad after 3 days... seems that the audio went to
distortion. This is the second one here; called hro said yaesu was
fixing the problem and was aware of it. Any one else heard of this?
Thank you, Anthony

Yes, a number of procuts like this are available through catlog
electronics parts vendors, and also at art supply and hobby stores.
Antique Electronic Supply is one such outlet. They are at www.tubesandmore.com

>problem or a fix?

It's a known problem with some FT-50s. The fix is to change two
surface-mount resistors on the control board. You have several
choices:

- Yaesu will fix under warranty if you send radio to them.

- Yaesu will apparently send you the resistors and instructions if
you want to do th work yourself.

- The instructions have been posted to this newsgroup multiple times
over the past several years; DejaNews should be able to find them
for you.

Three thoughts:
(All of this is from the 'unofficial' PSK homepage:
1. Use a variable resistor into a 1:1 audio balun (Radio Shack) (watch
the polarities) between the sound card out and the mic in. This will
let you fine tune the audio into the rig without messing with the
digital volume controls in the computer. It really helps to listen to
your signal on a second rig to get the levels right. It is very easy to
over drive the mic input and put out a distorted (and wide) signal.
Once you get the levels configured you'll find they are reproducable.
2. Use the 2n222 transister switch from a serial RTS line to key the
rig. Much more positive and you will not have to worry about other
sounds from the coumputer keying your rig. Also helps rig keyed lock up
which was something I had (see below).
3. I had some trouble with ground looping and/or feed-back which locked
the rig key down. So I used the PTT switch and a piece of surplus cable
'tween the rig and computer. It contains two pair each shielded. One
carries audio to rig (mic in) with shield as mic ground the second wire
in the pair is the PPT from the transister switch (which is at the
computer). The variable pot / xformer is at the rig end of this pair in

a small aluminum box. The other pair carries audio from rig (actually from my audio distribution systm which includes a DSP). This shield is the PTT ground. Works like a charm and is very neat, one cable 'tween the rig and computer. Three shielded audio cables (Audio In / Out / PTT) will work here just as well.
I have a nice PSK primer in Word.DOC format with diagrams / web links etc. if you would like I'll e-mail it to you. \

If you make your I/O cable carefully and use a variable pot you will not need a manufactured interface.. Also be sure to note the settings of the digital volume control / rig's mic gain and variable pot position. Then its a no-brainer to reset and get on the air.

Bob:
I've had mine just a little over a week now and like it a lot. Enough bells and whistles to keep you happily amused for a long time! I picked up the comet SMA503 antenna for it, which I like better than the stock Yaesu. (Of course you'll still have to use the Yaesu antenna for 6 mtr work). I work in downtown Spokane and the radio gets hit with intermod, but no more than the other HT's I've owned.

Yaesu really seems to have done their homework on this one. A lot of the things that bugged me about the 51r were fixed on this rig. One thing I really like is, I can sit the radio down (even in its case) and it stands up! ANyway, I'm still learning to operate the thing, but so far can recommened it.

5827. Field Day & Multiple Generators

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-25 00:00:00 UTC
From: Marty Tippin KI0LO <martyt@pobox.com>
Message-ID: <8gjbe8$85f$1@nnrp1.deja.com>
Source record: 79001

Our field day setup has grown in size so that we need to run two generators - we have 3 HF stations and 3 tower computers with big monitors. The plan this year is to have all the radios connected to the computer logging software via serial cable and to have all the computers connected via ethernet.

But there is some concern that running equipment all tied together like this from two different power sources could be disastrous due to the different phasing of the AC between the two generators. The equipment would only be connected by DC ground (serial cable between computer/rig and ethernet cable between computers).

Anyone have experience or advice in this regard? Seems like it *shouldn't* be a problem but since about half of the equipment is my personal stuff, I don't want to take any chances!

Any advice would be appreciated!

Probably wasn't just me - there were several vendors with piles of decrepit laptops, each supporting their own feeding frenzy. For my purchases, I stuck to a few flavors of Compaq so that I can swap subassemblies and leverage my prior knowledge of Compaq laptops. I picked and chose from each vendor those units that I thought had the best chances for new life.

Hey, a lot of people think they're selling gold. But it's a market - I can walk until I find what I want at the price I want.

Hamfesting is an art. It really takes a while to learn the game and you will get burned - education is never free. I won't buy a $10 CDROM from someone with a small table loaded with beanie babies and pencil sharpeners - that thing is broken; that's why it's on the table and not in his computer. I will buy the $10 CDROM from the commercial guy who pulled a skid of them out of a yellow Ryder truck. Most likely he bought a pile of unwanted computers from a corporation for cents on the pound and is selling off perfectly useable pieces and making good money doing it. But I won't touch anything in his box of assorted $20 motherboards. Those customer returns were returned for a reason. But I may take a chance on Mr. Beanie Baby. He probably bought a new Pentathalon 10,000 Terahertz with integral toaster-oven motherboard and he can't bear to toss that old Pentium 166 board that he paid so much for into the garbage.

The 3-day Dayton fleamarket is always an adventure.

Hi Ben,
Checked out my setup and I am using the 13 pin acc plug for all the connections. I used a resistor bridge to limit the mike input and a transistor switch for the ptt from the serial port. The audio output is fixed so the volume control has no effect on your settings. I make all the adjustments from the sound card.

I'm looking for a schematic to try and put this old rig back together. I was given it as a "basket case" with damage to the heat sink and power amp board. The problem is someone started to work on it and unplugged all the internal connections. I can't even start to trouble shoot untill I get them hooked up again.

5832. Warning to HTX-200 and HTX-400 owners - fatal design flaw

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-25 00:00:00 UTC
From: n1ist@netcom.com
Message-ID: <8gjf2cdij1@slb7.atl.mindspring.net>
Source record: 79006
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have just spent some time repairing some of Radio Shack HTX-200 and HTX-400 radios. All of them suffered from the same promlem - transmits fine, no receive audio but the s-meter reacts properly and the squelch seems to work fine.

This radio uses a push/pull audio stage; both sides of the external speaker jack are driven (probably to get more volume from the 3V batteries). The manual warns you not to short either side to ground. It claims that if you do so (plugging it into a TNC or using certain speaker mikes), the display will indicate 'S-SHORT' and the audio amp will be turned off.

In reality (confirmed by reading the schematic and looking in the radio), this protection circuit was never implemented - the components in the schematic are labeled 'nu' (not used) and are not installed. If you short either speaker lead to ground, the switching transistor used to mute the amp when the squelch is open will burn out. On the 2M unit, it is Q607.

This is a SOT-23 surface mount part. The service manual lists it as a 'KTA2015' labeled 'ZO'. I replaced it with a 2N3906 (same pinout) labeled '2A'. It is on the rear of the audio/RF board right where the audio board connects in, and is connected to pin 1 (switched B+) of the amp. Not too hard to change if you are used to surface mount work.

So what does this mean?

- DO NOT use the HTX-200 or HTX-400 with anything plugged in to the headphone jack other than a headphone or speaker.

- Make sure speaker mikes keep both sides of the speaker plug (3.5mm) isolated from the mike plug (2.5 mm). Not all of them are.

- DO NOT use this radio with a TNC or powered speaker sharing the same power supply (unless you wire up an isolation transformer for the audio...)

/mike

It's a decent under-$1000 rig, with more bells and whistles than you'd expect at its price. The only feature I miss is VOX.

The noise blanker isn't of much use, as it tends to introduce distortion on strong signals. Otherwise, I'm pleased with it.

If you're an ARRL member, hunt up the review on the ARRL Members-only page. The ARRL review was pretty positive.

Hello!

I was looking into buying an antenna in the next little while. As of right now, I am entitled to 6m and up, however, I will be starting a morse code regimen in the next few months. Does it make more sense to purchase an expensive 10 band antenna, and not use most of its capability, or would it make more sense to get a cheaper and smaller antenna that would handle 6m and 2m, and buy an HF antenna later. More than likely, I will be using it with an IC 746 transciever. I will be taking my rig to Northern Manitoba (58ï¿½N), and the winds can be pretty cold and brutal up there, so I'm afraid of toppling tower syndrome :)

Any recommendations? Product recommendations? Thanks!

One thing is for sure, with people trying to sell used garbage (dirty, abused and scratched up) radios for 10% under the price of the same radio new....well fleamarket vendors....the new equipment vendors thank you from the bottom of their hearts!!!

If I am buying used stuff I expect it to be in good condition and be half of what I can buy it new....if not...well I just buy new. Then I get a warranty and the equipment looks nice, just like the way I treat my equipment.

I would tend to suggest against an antenna that handles 6m/2m and HF all
in one piece.

A lot depends on how much room you have for your antenna and how
portable you expect it to be. Are you talking about something you
expect to use mobile, or are you establishing a base station?

Andrew,

For base station use, I just bought a GAP Antenna Eagle DX. This weekend I will be stretching her wings on the WPX CW contest. You may want to look into one of their models that covers 2/6M, the Challenger DX I think. Only problem is that you need some buried ground radials, but that should not be too bad. They are designed to be ground mounted (on a 10' mast pipe) so no towers are needed.

About the winds, they seem pretty well built. I see comments of the thing withstanding some fierce winds, but do not quote me.

Good luck on upgrading! HF is alot of fun.

73,

Jason Hissong

Sounds like a perfect candidate for a 'schematic' on the Radio Shack
web page! The 202 and 404 both had a recomended transformer
coupling for the HT to a TNC. I wonder if because that's how they
did it before, that's how they tested these without thinking how the
majority of users would try to hook up.

Do you really feel that you will need/want antenna's for "all the bands?"

Just as you will eventually discover that there are one or two modes you
really enjoy you will also find that there are only one or two HF bands
that appeal to your operating style. (chew the fat, collect QSL cards,
emergency operations, whatever.)

Nothing can beat a simple dipole for portability, ruggedness and ease of
reinstallation after the wind blows it down.

For a band like 20 you can homebrew a "plumbers delight" beam comprised of
a couple of elements that will hopefully be rugged enough for the nastiest
Canadian winter.

When the time comes, welcome to the HF world.

Hello Bill:

I have an absolutely mint PRO2006 I was going to post. unadulterated can recieve just about everything. It's been used very little. Guess i'm not much of a scanner head. Interested? maybe we can work out something. These thing are like hens teeth lately all being grabbed for military listeners and celllular heads. Don't need the supply if we are talking.

73 es thanks

Tony K2YPT

I need to know the particulars of hooking up my Kenwood TS570D for PSK31 operations. I would like to hear from someone who has the 570 and has experience with hooking their radio up on PSK31.

Thanks.

Did you try the MFJ site for the manual? They have most, if not all, of their manuals on their website in PDF format. I found one there for the MFJ-1272BZ mic/TNC switch that I picked up in Dayton. The diagrams were missing, but everything else was there.

Hi All,
Selling a nice Yaesu FT-900AT HF radio.
This radio does not have a scratch and works 100%.
Just had it checked out by Yaesu a few months back.
Selling to buy a boat!
$750 and will split shipping
Reply to:
gbaker@pacifier.com
Forgot to mention that I also have remote mounting kit that I will include
for mobile operation (I have never used it mobile)
Thanks,
Gary N7GB

Hi Guys!

My FT50RD developed on on/off switch problem. I wrote Yaesu about it THIS last weekend, and they replied by Monday AM.

Mike (N6MIK) wrote that they switch is easily replacable and that he placed an order with the parts ection to send me one, free of charge! He followed up saying the part was ordered and allow a few weeks for delivery.

The switch showed with TODAY's (Thursday) mail!

This is a HUGE positive indicator of Yaesu's Tech Support, and I thought I would share it with you all.

Thanks Yaesu - Ed - KF6YKM

Simply put:

Do tie the grounds together on everything. You don't want a safety
hazard.

Don't tie the white and black leads from the generators together.

>verticals in the real world as opposed to the advertisers, please reply to
>this message.

I just put up (today) the MFJ 1798 vertical. I am pretty thrilled
with it. Even though their instructions were not precise (I had to
take apart and re-do some stuff due to ambiguity in their
instructions), I was surprised at the really fine build quality.

After putting it up on a temporary stand (a 5 foot Radio Shack antenna
mast sledge-hammered about a foot into the ground), the tuning went
very well. I was able to tune with an SWR below 1.5:1 for about 50
kHz on 75 meters (3850-3900), about 40 kHz on 40 (7240-7280), all of
30, 20, 17, 15 (had an SWR of about 2:1 across 15 meters), all of 10,
6 and 2 meters. Needless to say, I'm thrilled. The antenna is VERY
easy to tune on 80/75, 40, and 30 meters since you simply cut-off the
ends of some telescoping rods at the bottom of the antenna. Thus, you
don't have to pull the antenna on and off the mount in order to adjust
it.

I later put it on a Radio Shack tripod mount on my roof. The antenna
stayed very well tuned (it went up about 15 kHz on 75 meters, but the
rest of the bands were stable).

This vertical uses an elevated feed and counterpoise system. Thus,
there are no radials on the ground or roof to fool with. I ran it at
full legal limit after tuning and it worked just fine.

You can download an electronic version of the manual from MFJ's web
site if you want to see how this thing goes together.

That said, MFJ's customer support is pretty bad. Nobody there seems
to know ANYTHING about this antenna. I had to call them twice with
questions about ambiguities in the manual and they didn't seem to be
able to help me at all.

In short, the antenna works EXACTLY as advertised, down to the specs
on the 2:1 SWR bandwidth ratings.

If you DO buy one of these (Texas Towers had the best price at $360
shipped -- I got mine in 3 days), you can E-mail me if you need help,
since MFJ is pretty useless.

The only thing that I've ever bought from MFJ in 15 years of ham'ming was a dummy load. I always thought their stuff was "overrated" in their advertisements and ads. However, this antenna really surprised me in terms of build quality and performing exactly as advertised. I highly recommend it.

Associated equipment: Yaesu FT-847, Drake 4310 (commercial version of the Drake TR-7), Drake L-7 linear amp, Drake MN-2700 antenna tuner, Belden RG-8 coax.

Hope this helps!

Fred - KB7UUC
Detroit, MI

I have a yaezu ft-101ex that I would like to sell or trade. Radio recieves well, transmit is low, could be tubes could be something else. I just want a backup radio and I don't want to put money in to it. MMake me an offer, I will considder trade with cash if you would like, just something for a backup radio, a ts130 or something, even a 2950 if the deal is right. Email n1umj@mediaone if you might be interested. The radio is a backup and I don't want to put any money in to a backup radio especially where my main radio is so reliable, I just want a backup just incase. thanks,

Prices I give along with the discription of the item will be what AES
is selling it for rounded to the nearest $1, then at the end, what
I'm asking for the whole lot.

Yaesu FT-50RD Dual Band HandHeld radio $240

2 Maha MH-FNB-41 9.6v 900mah NiMH batteries $55ea $110
These batteries will give a full 5w out all across the band.

Maha universal drop in rapid chgr/conditioner does nicads and nimh
batteries $60

CT62 Cat Interface cable $30

FTT12 16# kepad Enc/Dec DCS & CTCSS $20

ADMS-1E Windows Programming Software $40

All this as you can see retails for $500 +/- a few dollars.
I'm asking $325 shipped prepay or COD.

Well Andrew, antennas designed for a specific band almost always perform better than one designed for several. However, there are other considerations. How much room do you have for multiple antennas (some antennas will have to be placed on a separate mast because the others will interfere with it)? Do you want to run all that coax for multiple antennas? Will the separate antennas cost more than one? What about the multiple masts, guy wire, and ground rods, if separate masts are required? For many people, these other considerations lend weight to the multi-band antenna.

Dwight Stewart (W5NET)

Hi Andrew,

I have Yaesu folded dipole for HF, Force-12 C2SS tribander YAGI (20-15-10),
Comet CA-52 for 6 meter (bad antenna!),
Hygain V2R for 2m & V4R for 70cm, Diamond X-500 dual band (144.430), and
Cushcraft 26B2 for 2m.

All served best for what their design intended to do! (Except for Comet
which is a real bad one).

You can see the pictures in my site: http://www.geocities.com/reinhardsual

Regards,
Reinhard Sual

5869. ~/\/\~OTOROLA==>[Programming RIB BOX & Cables Too]<===

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-26 00:00:00 UTC
From: msisco9939@aol.com
Message-ID: <20000526004712.24197.00000130@ng-fp1.aol.com>
Source record: 78599

Yep:

I still have one complete set availible ! This is the Whole set up required to Properly Program Both Motorola High-End Portables, Mobiles, and Base Stations, as well as the earlier ones too.

This is the "Real MaCoy" Not a Clone or Home made device. Most Clones are probably A-OK, however if perhaps you have a Cheap one, or bread-boarded type, you could be out as much as 379.00 if you have a Power Supply problem or any other glich during the Programming Cycle. Especially MTS2000's and HT1000's, So be forwarned !!

Includes the following:

Motorola RLN4008B Rib Box (Just like Brand New)
Motorola Instructions (Includes the schmatic diagram)
Motorola Power Supply (Dual power support recommended to
insure against code plug corruptions)
9 Volt Duracell battery (Mounts inside the Box in the event the Power Supply dies.)
Premimum Rib to Computer Cable
Shipping Box (and a small bonus, its in the picture)

http://www2.4dcomm.com/metrotech/mrbox.jpg

$195.00+ $8.00 for Pirority Mail Shipping, Insurance and handling.
==========

I also have some Factory programming Cables too, Most are either Brand New sealed in the bag, or very close to it.
++++++++++
Motorola Factory M1225, GM300, SM120, GM900, Desktrac, Maxtrac, Radius Mobile, (This is a Professional Cable with the BNC Jack for making Professional
Soft-Pot Audio Adjustments)

$85.00 for ones Still in the Box, $65.00 for ones in the bag.
Picture can be seen @
http://www2.4dcomm.com/metrotech/motomax.jpg

I also have some of the Best Clones I have ever seen too. They have a Super Heavy Duty Support at the End of the Porgram Cable as well as Strain Reliefs at the Connector head, and all the pins are GOLD PLATED. Not Some Cheap Connector Shell and a Extension Cable.

$39.50 Picture can be seen @
http://www2.4dcomm.com/metrotech/newmax.jpg

++
Factory VISAR Programming Cable with the special Plug for the RTX-4005B
test Fixture. All Brand New in the bag $135.00
++
Factory GP300 / P110 Programming Fixture, this is a Complete Fixture
to allow the use of the Radio Battery or a External power Source.
$135.00 (Also with the Factory Adaptor Slide, it can be used to program
a GP350) $35.00 Extra with purchase of the Programming Assembly or
$45.00 seperate.
++
Factory P50+ programming Cable, for the Programming of the PL/DPL Boards
in a P50+ $45.00ea
++
Factory ASTRO-SABER CABLE, and Yes !! this is the one with the electronics
inside the connector head for FLASH PROGRAMMINMG $175.00 Brand New
in the Bag
++

One of the BEST R100 REPEATER CABLES I HAVE SEEN !!, and Yes this
is the one with the electronics mounted inside. Very Similar to the picture @
http://www2.4dcomm.com/metrotech/newmax.jpg

However, has all the heavy duty supports except at the Plug Side as it goes
into the jack completely

Asking $85.00
==
LOTS of others too (But NO HT1000's) at this time, maybe later....For Cable
purchases alone, please allow $8.00 for Pirority Mail Shipping and handling.

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate
shipping is desired) or a Personal / Business check is A-OK too if you do not
mind a Short Shipping Delay due to bank processing time. This is required only
the first time or two as once you are in the data base, PrePayment is no longer
required

Plse, SW is availible "Only" through Motorola C & E, so if you need SW, it
is highly recommended that you contact them and get the proper SW and
Support materials.....It's Cheap compared to a radio failure.

Monty

5871. WTT: HP200LX for PalmV...

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-26 00:00:00 UTC
From: "Jeffrey M. Swiger" <N8NOE@Ameritech.Net>
Message-ID: <392E2104.9201FC5F@Ameritech.Net>
Source record: 78601
Cross-posted to: alt.comp.sys.palmtops.hp,alt.comp.sys.palmtops.pilot,rec.radio.amateur.equipment,rec.radio.amateur.digital,rec.radio.amateur.packet

I'm looking to part with my last HP200LX for a PalmV....
I need the Second Palm for Mobile APRS & Digital Communication.
I have a MINT condition Double Speed, 8 MEG, HP200LX.
Extras include All the software, Case, 1414 LXM 14.4 Modem/4Meg Flash
Original Books, ACT! for HP, PC in your pocket book, You'd have to see
this!
The Hinge is great, latch is still stiff, This was my pride and joy!
I've been working with My County and developing Ham Radio communications

like APRS (Automatic Position Reporting System), and have been using
Windows,
and PalmOs.. Just not using the HP200LX, and have the Palm all the
time..Just that
simple.. I"m going to dedicate a PalmV for Radio Communications...
If you have a PalmV with or W/O Extras, and need a HP200... Drop me a
line..
I have all the connectors for PalmV already, If you have a III, w/Serial
connectors, this would be acceptable..

250 watts out of a TR-7? Book says 250 w input. Double the power? How do you do it? The p.s. barely makes 25A.

> when I can buy a town house or a house of some kind?

You may want to consider a qrp rig. They are cheap, and because of the lower power you don't have too much to worry about as far as the neighbors are concerned. There are several makes and models to choose including some ten meter rigs that can be used in the car, if you prefer that over using it at home. I heard NorCal is working on a 20 meter PSK31 kit for about $30.00, a cheap way to go if you like building kits.

I think http://www.qth.net has a mailing list there called "cliffdwellars" which deal with hf hams living in apartments. Qth.net also has the qrp lists.

good luck

joe

Thanks to all who replied. I went out bought a CAT5 patch cable cut in half,
used one half to hook up an old of 5x5 Telex headset for the Icom, and am
using the othere half to build my PSK-31 cable with a 100:1 voltage divide.
If that has problems I will add an isolation transformer.

The Frederick Amateur Radio Club (FARC) presents the annual
Father's Day Hamfest on Sunday, June 18, 2000
from 8:00am to 3:00pm, rain or shine.
(Access for tailgaters opens at 6:00am)

It's at the Frederick County Fairgrounds on East Patrick Street in
historic Frederick, Maryland. Easy access from I-70 and I-270,
plenty of parking.

Talk-in on the 147.060(+) MADRA repeater.

We'll have Radios, Electronics, Computers, Acres of Tailgating,
Indoor Commercial Vendors, VE Testing and more.

Good food and refreshments available.

On the web go to http://www.qsl.net/k3erm/ for more info and a map.

General admission is a $5.00 donation.
Tailgating spaces are $5.00 each + general admission
Indoor tables are $10.00 each before June 10th, $15.00 after.

One of the largest and most popular hamfests in the
Baltimore/Washington metro area. Don't miss it!

Questions? E-mail k3erm@qsl.net

Thanks & 73,
Bob K9CMR

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-26 00:00:00 UTC
From: BobJ <nospam@nospam.not>
Message-ID: <Z4wX4.1788$ET3.357116@nnrp1.sbc.net>
Source record: 78613

Hi Ryan,

This may not be what most apartment dwellers want to hear, but to be honest, I've worked from apartments and condos for years, and I have never NOT had TVI or RFI, even with ALL the appropriate filters and chokes inline. Grounding is big problem. And along with the RFI comes complaints from neighbors.

So, with that background in mind, my advise is:

First, despite all the pie in the sky stories you hear of apartment dwelling hams getting along with their neighbors who never complain when you bother their TV's, stereos, cordless phones, VCR's, baby monitors or whatever (yeah...right - NOT!), NEVER admit that you're the source of the TVI or RFI. Learn and perfect the 'Sergeant Schults' -- ("I know nothiiinnnng!!!"). Keep it handy, and use it constantly. I say that rather tongue in cheek, but it's an excellent bit of advice.

Second, keep your antenna as low profile as possible - totally unseen is best.

Third, whatever you end up doing, use LOW POWER - pumping out a hundred watts in an apartment complex (besides being dangerous - RF can be harmful) is just asking for trouble. Consider QRP operation (most HF rigs will go down to 5 watts output) as a lot of fun, and a viable alternative.

As a side note: over the years, I've built, bought, and tried about every antenna in the books for apartment use without much success. I don't normally 'hype' a product, but a couple months ago I bought what is called a "Cliffdweller" antenna from a group of hams in Missouri somewhere, and so far I really love the thing. I mounted it INSIDE my apartment on the wall of my radio room, so none of my neighbors even know I HAVE a ham antenna :)

Realistically, I know it can't work as well as a beam antenna or a high in the air, long outside dipole, but I can't have those things anyway :(I've been able to work some DX with it and the usual local stuff and considering that without it I'd wouldn't be working ANYTHING at all, I'm a happy camper. If you're interested, I got it off of Ebay (they seem to sell 'em there every week) - just do a search for "cliffdweller".

I hope something here helps - I don't really mean to sound cynical or bitter about RFI and neighbors - but in a way I guess I am. Some people ARE nice and try to understanding - some are real jerks. This hobby has given me some extremely fine memories - and a few negative ones. We can't all live on a hundred acres of ground out in the country, run 1500 watts and not have to worry about 'bothering' anyone -- but it WOULD be nice wouldn't it! :))

Best of luck - BobJ.

My suggestion is make or buy an antenna (or antennas) for 6 and 2, then make antennas for HF later. Dipoles for HF are easy to make, and just as good as the ones you can purchase.

I would suggest contacting Kenwood and see if you can get information on the color. Another option is going to a paint shop and having them match it. In either case, you will probably need top repaint the entire cover to get an acceptable appearance. A third option is finding a replacement cover in good condition.

In a previous article, <nerdware_nospam@laidbak.com> writes:

I had made a posting to inform hams around the nation that I was seeking a stamp to be designed to commemorate ham radio. I had also indicated that I had not yet heard from ARRL after about two weeks. As many of you may know, Jim Haynie has been busy in many areas and not near his desk. I have heard from him and Steve Mansfield (legislative and Public Affairs dept.) with several e-mails today (Dayton is now over).

ARRL is giving this matter its attention and has a call in to the Stamp Committee. Legislative issues and possible errosion of having the welcome mat out for us is an issue to be considered in how ARRL can address this issue.

Apparently some individuals have e-mailed ARRL with a tone suggesting that ARRL did not want to do anything about the stamp. If any of you had that impression you were mistaken. I had e-mailed Jim and not heard from him in about two weeks at the time of my posting. I indicated I had not yet heard from him as of my posting to the news groups --- NOTHING MORE THAN THAT.

Please be assured the matter is being addressed by ARRL.

I do not want ARRL to jeapordize its political potential by getting the stamp done at the expense of spectrum protection or some other needed legislation. How ARRL can help out on the stamp without creating a problem is part of what they need to look into.

I am asking hams around the nation to indicate to the stamp committee that there is strong grass roots every where for the stamp. The only contact to ARRL that might be needed on this matter is an apology for those that got the wrong idea about ARRL's attention to the stamp issue.

Bob:

I did the same thing about a year ago. I believe there was also a 14
pin DIP that needed to be replaced. Think it was an LM324 or a
comparator. If that doesn't do it, let me know and I will dig up the
schematic.

Andrew,

I would avoid multi-band commercially made antennas. They are always
less efficient than dedicated single band ones, besides being very
expensive. The one exception to this is an antenna fed with balanced,
tuned feeders, fed from a good balanced antenna tuner. Such an antenna
will work on most ANY hf band, and efficiently. It is my choice for
multiband with a single antenna. The best arrangement for general use
is a center-fed horizontal wire as long as you can make it, as high as
you can make it. A length of just 66 ft will work well on 40M and up,
and can cost almost nothing to make.
Don't purchase a tuner. You can make one fairly easily with a
capacitor and home made tank coil and link coupling. See any ARRL
handbook of recent decades. The split tuning capacitor for this will
cost you a fraction of the cost of a multiband vertical antenna, for
example.
If you have VERY limited space, try Hustler mobile whips and
resonators, or even a pair of them back to back, making a loaded short
dipole. Quite lossy, but still better than most anything indoors, and
not too expensive.

The interesting thing is that the R/S speakermic that's designed for the 202 and 404 has a common-ground connection - I wonder if there's a warning about using this mic with the older radios?

Go to Radio Shack and get on of their $4.00 foot switches and plug it in
the back of your amp in the hole that says
RLY, or Relay. Or you could just get an rca plug and hook the two wires
coming off the plug to a momentary switch like a CW keyer and hit the
switch or keyer before you key up your radio.

Take the easy way out and find a computer network cable and hook the
psk31 up that way. You get the audio out of the 706 to the sound input
and you need about a 100:1 resistor devider. Maybe around a series 100K
and a 1 K to ground. Just unplug the mic and plug in the computer.

Don't know how much current the foot switch would have to handle with that amp, but the little inexpensive Radio Shack foot switch has worked great for me with two h.f. Yaesu transceivers and a Ten-Tec Argosy. It's easier to operate than a heftier foot switch during a contest or similar activity. After operating HZ1AB, with pileups all night I finally went to sleep at the nearby U.S. Military Mission guest house. A couple hours later, I woke up with a terrible cramp in my right leg. It was from using the hefty Collins foot switch all night! ... I'm surprised that more hams don't use the lighter, cheaper Radio Shack foot switch.

5910. Re: Better to have 1 antennaa, or several single band?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-26 00:00:00 UTC
From: Joe Schlatter <joe@schlatter.org>
Message-ID: <392f2925@news.planetc.com>
Source record: 78640
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.amateur.equipment

First, use a wire antenna, put it up as high and clear as you can get it. Feed it in the center with ladder line -- balanced, 450 ohm line. Buy or build a tuner to match your rig's unbalanced 50 ohm output to the ladder line. A standard installation is 135 feet of wire, split in the middle and center fed with the ladder line. Check out QST ads for a device called a Ladder Lock -- it's a neat plastic device that clamps onto the ladder line, anchors the antenna wire, and allows you to solder the ladder line to the antenna wires. In fact, you can find in the QST ads a combination deal, 100 feet of ladder line, 135 feet of antenna wire plus a little for the end insulators, end insulators, and a Ladder Lock.

Do not get to excited about a lot of the stuff you will hear about how to run the ladder line. Just keep it a foot or so away from metal -- like the gutters and downspouts. My shack was in my basement, I punched a hole in the concrete block wall, pushed the ladder line through, filled the hole with foam sealant, draped the ladder line across the roof, up to the antenna, and worked the world on 100 watts.

135 foot long antenna will work on 80 meters and higher; it will load on 160 but is very narrow. 67 feet of wire, center fed, will handle 40 meters and higher.

Try not to shorten the ladder line -- for some reason, this antenna likes about 100 feet of ladder line.

Now, if you can get a tower up, the optimum is single antennas -- yagis -- for each band. However, that gets heavy and expensive -- big rotator, lots of cable, big tower, etc. If you must settle for what most hams have, put up a 50 foot tower and stick a good tri-bander on it. The 7 and 9 element Cushcrafts are good; even the 3 element Cushcraft will do an adequate job. Moseley's have a good reputation but I have read some very critical comments about them of late. Telrex makes a fine antenna also.

A 135 foot wire, fed with ladder line, and a 50 foot tower with a good tri-bander (and some VHF or UHF antennas, fed with 9913 with tower mounted receive pre-amps) will yield a respectable antenna system without breaking your bank account (too much).

Can't dig a hole and fill it with concrete for the tower and cover your property with guy wires? Then buy enough tower sections to clear the top of the house. Bury a tower base in the dirt (or concrete) at the side of the house, and use house brackets to mount the tower to the side of the house. With a two story house, you can get 30 feet of tower -- not the best but it'll do until you win the lottery.

Didnt see any new Icom radios, but Kenwood was showing one they hope to have
out by Dec. Covers 160-1.2Ghz, all mode including Satellites

Source record: 79040

A friend of mine has a dipole on his balcony and says he has no problems, and works the world. He reduces his power to 25 watts. Note that the Outbacker is probably less efficient than a dipole, so your effective power would be less, but perhaps you could run more power without problems due to the lack of efficiency. Watch your own TV as a guide to whether or not you are causing problems.

5918. Kenwood SM-230 Calibration?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-26 00:00:00 UTC
From: Len <lburke1@midsouth.rr.com>
Message-ID: <0AIX4.30940$L3.218908@typhoon.midsouth.rr.com>
Source record: 79042

I've got an SM-230 monitor scope that I use with a TS-850. When changing Scan Widths, I noticed that the frequency of the signals is not accurately represented on the grid scale when in modes other than 25kHz. While searching for a way to adjust, I found a number of adjustment points on the right side of the unit. The manual only covers two of them, and neither seem to address this issue. Can I calibrate the scan width some way?

Thanks in advance.

Len

Hi,
I have a UHF Spectra A7 450-482MHz dash mount mobile for sale. 45 watts. It has 128 channels and a 8 character alphanumeric dislay. The front face has no scratches and no wear on the buttons. This has the 12 buttons on the right. It has the mike, power cord and mounting bracket. I can program for you. It also has the RSSI option in it which is a relative signal strength reading on the alphanumeric display. I will ship it for $450. Thanks, Bob

5920. VX-5R DX on 6M? Is it Possible???

I certainly don't! If it is a really good price, sure, but if it is only
a little bit less than new, I'll just pay that little extra. And if I
don't quite have the money, I'll wait an extra couple weeks and save up.
I know that sounds strange in these immediate gratification days. :^)

Source record: 78746

Hi Ryan

You can get many stories about apartment HF..... Best thing I can say is just to try it and see what happens.
Depending on your apartments location many things may be possible. In my case I live in a one story apartment
and have a very good relationship with the manager. In my case I am lucky that the manager is an ex-serviceman. During his 25 years in the service he used amateur radio phone patches and understands the nature of a radio hobby. Because of this understanding I have up a 40 meter loop on the roof. It has loading coils for 75 meters and will load from 75 to 15 meters without any TV interference. All the apartments are on cable which I am sure helps. It dose make a "clicking" noise on my phone when I key up and then release the key. So that a cw contact I am sure would drive anyone nuts so I am taking steps to stop that. The loop is 32' (128' total) on a side and is about 5 1/2" above the top of the roof. Not ideal but works. It also keeps visibility down. I am also on the 'back' row of apartments and the roof faces away from normal public view. Since I am on the ground floor I was able to put a 8' grounding copper rod in. It has about a 4' run and seems to at least work how well but I'm not sure. But at least it makes me feel better. I also put in some plants and an owning outside to help keep the focus of most peoples eyes away from the roof - to date no one has ever mentioned the wire on the roof - they may have seen it but did not ask if they did.
For all those who want to know I use a Yaesu FT 990 and FL-7000 amp. I do not drive the amp at full power because of the current draw (I'm not sure if the apartment wiring would take it). But I have run it up to 300 watts. This goes through a Heathkit 2060A tuner. On the receive side I use a Yaesu SP-6 speaker with a built in DSP unit from Timewave called DSP 59Y. So good luck to you I hope it works out for you like it has for me. And unless your an expert get as much help as you can because you never know who will mention something that makes something work better. That is what I did and I am glad I did.

Source record: 78748

Hi Dale

Quoting from the service manual:
" Hard Reset " page 2-3
1. Turn the transceiver off, and then turn the Backup switch (inside the hole near the front center of the bottom cover) off.

2. Let the transceiver sit for several minutes.

3. Turn the transceiver on, then turn the Backup switch on (after the transceiver has been turned on).

Dale that's all the service manual says, hope it helps.

5929. FS: Old Radio/Electron Tube Books (5): 1929 - 1957

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-27 00:00:00 UTC
From: oldbooks78@aol.com
Message-ID: <20000526212721.14508.00000301@ng-fa1.aol.com>
Source record: 78749

I currently have for sale the following old radio/electron tube books. Prices include book rate postage (within the US). The books are:

"Elements of Radio Communication" by John Morecroft, published in 1929 by John Wiley and Sons. The 269 page hardbound book is in good condition. There are pencil marks and notes on many pages, as well as notes inside the front and rear covers, but everything is readable and secure. Nicely illustrated throughout, with several photos of old vintage equipment. There is also a small pad of unknown purpose stapled to the first blank end paper. Available for $14.

"Practical Radio Communication; Principles - Systems - Equipment - Operation Including Short-wave and Ultra-short-wave Radio" by Arthur Nilson and J.L. Hornug, published in 1935 by McGraw-Hill. The 758 page book has blue cloth over flexible board covers. In good+ condition. There are some passages underlined in pen in the first 10 pages of the book, otherwise very clean. Nicely illustrated throughout. Available for $15.

"Communication Engineering" by William Littell Everitt, published in 1937 by McGraw-Hill. The 727 page hardbound book is in about fine condition. There is a previous owners name inside the front cover, and a few minor pencil notes on the first blank end page, otherwise very clean. Dark green cloth covers with gold lettering on the spine in particularly nice condition. Available for $13.

"Electronic and Radio Enginering" by Frederick E. Terman, published in 1955. The thick, 1078 page hardbound book is in about very good condition. The pages are generally clean, with no page tears, but with underlines on a few pages, and a previous owners name inside the front cover that is marked out with black marker. Black cloth covers in nice condition, with a strong binding. Lots of good info in this text. Available for $13.

"CBS Electron Tubes and Semiconductors Technician's handbook" first edition, first printing, published in 1957 by CBS-HYTRON. Unnumbered pages, about an inch thick, card covers with a spiral binding. The book covers receiving tubes, picture tubes, crystal diode reference guide, germanium and silicon diodes, silicon power rectifiers, transistors, special purpose tubes, tube type numbering system, use of tube testers, and much more. In very good condition. Available for $15.

If interested in any of the above, please email to "Oldbooks78@aol.com" to reserve. Thanks, and best regards.

Dave

Sure it's possible

Here is Hong Kong (VR2), one ham got a 5R + wire antenna can make a QSO
with Japan

While the band is open everything is possible.

Hi there,

Over the past few year the ham world has been declining mostly because of this...the internet. The great propaganda tool it holds loads of information about hobbies that are not in the lime light all of the time...amateur radio to name one.

I have registered the domain cq-radio and what I hope to do is to create it in to a major library of information for new amateurs and old ; somewhere where people can easily find information. There is the basic layout of the site already up there and it shows what I hope to offer on-line courses, etc. Please go and visit is and tell me what you think.(sorry for the js error on line 110)

To make cq-radio in to a good site; I can not do this alone and what I want is YOUR help. You don't need tobe a brilliant html programmer with qualifications in java script. If you have some thing to offer then I wanna hear from you...so please e-mail me on the below e-mail address.

rdheath@cq-radio.co.uk

Thanx help me to help the hobby

Hello Andrew,

See, you ask 15 hams the same question and you get 15 different, but all good, answers! I won't tell you what kind of antenna to buy or build, but I agree with the concept of getting some sort of HF antenna. Even before I got my first license, I bought a multi-band vertical (Cushcraft R7 - mostly due to $$$ and space limitations). My grandmother always told me, "You have two ears and one mouth. Use them in that proportion!". So I took her advice and did a lot of listening during the months when I was studying theory and code. You will quickly be able to determine which operators have an easy to listen to style and which ones do not. When I did get my license, I tried to emulate the style and mannerisms of those operators that I enjoyed listening to so I wouldn't sound like a total "greenhorn" on the air.

Good luck with whichever antenna you decide to buy/build.

Just picked up a Midland 70-924B UHF Repeater to be configured as a digipeater hooked up to a Kantronics KPC9612 Plus
It has a 15 pin accessory connector on the back which I would assume is for a tone panel or other devices. Does anyone have any specs or hookup diagrams for this unit? It would be greatly appreciated.

Thanks to everyone.

Jay.

I have a super nice sounding Drake TR7 HF Transceiver that is
totally solid state for auction. It is loaded with some goodies.
The accessories include: Drake PS7 Matching Power Supply,
NB7 Noise Blanker and some narrow filtering. This covers 1.5-30 MHz.
Digital readout. 200 + watts out on certain bands.

Plus, if the auction goes beyond a certain price, I will include a
like new Hustler 5BTV HF Vertical. This is the LAST DAY and there is
no reserve! Pretty good price, too!

5952. Dayton Fleamarket and insane pricing

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-27 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <8goj5m$e0p$1@w3eax.umd.edu>
Source record: 78772
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

It has long been my belief that at any hamfest, prices go down to normal right at the end. The "true bargains" were snapped up at the beginning, probably before you even woke up. At Dayton, bargain time is Sunday at noon, when the flea market is nearly over.

Dayton is a huge social event for many people. You can tell these people from those who want to sell their gear by looking at the amount of stuff they still have on the table at 5 p.m. on Saturday.

I've personally gone to hamfests and put out low prices on things if I really wanted them gone; items for which "I think I want to keep this, but if someone wants to give me 75% of the new price for it, I'll take it" rarely sell...which is the idea...

But yes, Dayton prices are pretty high. It was like that 8 years ago when I first went, and it's still like that, but it's a HUGE show, a huge event, and a chance to see a lot of friends in one place.

And yes, there are still bargains out there. With that many people buying, they're not likely to last long.

And never be afraid to haggle. Did you pay full-price for your car? Your house? Just because someone asks $200,000 for a house don't mean they expect to get it...

>Well sellers can dream on. I saw a Realistic HTX-404 in the box for
>$175.00??? What a joke! It was over 5 years old and the battery pack
>needed rebuilding!! He was a two-way dealer. They are USUALLY the worst
>for pricing things too high. I got a NLS Miniscope 230 working in good
>condition with the probes and carry case for $50.00 from a 2-way dealer.

In rec.radio.amateur.misc Mike Yetsko <joe@user.com> wrote:
: Sounds like a perfect candidate for a 'schematic' on the Radio Shack
: web page! The 202 and 404 both had a recomended transformer
: coupling for the HT to a TNC. I wonder if because that's how they
: did it before, that's how they tested these without thinking how the
: majority of users would try to hook up.

The HTX-202 and 404 audio output is isolated with a large capacitor (C72)
from the audio amp IC (IC601), and can be safely connected to the
audio input of a TNC. I have operated packet with HTX-202s and several
different TNCs with no problems.

FS: Motorola 2-Way Trunked Radios "Maxtrac 800" (410) Baltimore,
Maryland, MD area

Dear News Readers,

I am selling my 5 unit, 2 base station Motorola 2-Way Trunked Programmable
Radio System "Maxtrac 800". It runs on 800 megahertz frequencies. I will
sell the system whole or separately.

For more info and photos, check out our web site at:
http://takingcareofbusiness.com/vehicles/radios.htm

I am asking $750 for the system complete. All offers will be considered!

"BEST OFFER" GETS THE RADIOS !

The system specifically consists of:
5 Motorola 2-Way Trunked 800 MHz Mobile Radios "Maxtrac 800" Programmable
15W 1 System / 1 Subfleet ($3,907.50 new)
2 Base Control Stations ($748.00 new)
1 Deskset Base Station Extension ($434.11 new)

The system was used for my towing company, and we have reduced our fleet
and have decided to utilize cellular communications. In Baltimore, a
company
called Nextel has purchased and is converting 75% of the analog 800
megahertz frequencies to digital signal only, reducing the system my
radios operate on. The system was running on 20 different channels, and
will
probably be reduced to about 5 channels which might be pretty crowded in
Baltimore, depending on how may radio users switch to digital or cellular.

If you have any suggestions on any places on the internet that I should
advertise these radios, I would really appreciate your advise.

Kenwood TS-600 all mode six meter base station. Operates in SSB/CW/AM/FM with power output adjustable from about 500mw to 12 watts. 110V AC or 12V DC. This radio does not have an offset for repeaters or a PL board. Very good cosmetically and excellent electrically. It has a small chip off the front bezel under the S-Meter that is difficult to notice. I've owned this radio for 15 years and am selling it due to me upgrading my license. I prefer to concentrate my efforts on HF. If my picture doesn't show up please go to : http://hometown.aol.com/yardleyite/page1.html Happy bidding and 73!

Source record: 78786

Scott,
Your "new" power supply is a switching supply. It will emit a high pitched whine (which us old timers probably can't hear any more, hi). Your old supply I assume was an RS-35A which was an analog supply and doesn't generate the high frequency the switchers do. Just one of the prices for being small and light weight, I'm afraid. Biggest reason I stick to the old analog ones.
73,
Don, WB5HAK

A new amateur radio website would like information on your radio club.
The new website: http://www.callingcq.com will be up and running sometime
around the first of June. We will feature a swap and shop, special event
section as well as information of local radio clubs. We would like for club
officials or anyone that has all of the information on the club to send a email
to callingcqweb@aol.com with the following information: Club name, URL address,
and Contact name and email address. Don't worry about duplicate entries we will
filter them out.

Thanks very much for your support and we will be soon asking for submittal of
ad's for the hamfest section. If you can't wait go ahead and send it, we will
get it on as soon as possible.

Shack Spring Cleaning List 5/27/00

All items are as is. Items will be listed as working or not. Most items I can supply digital photos of (or can take). Prefer payment to be US Postal, Bank or International Money Orders, checks are ok, but will hold up shipping until they clear the bank. Shipping is additional. Digital pictures can be supplied for most items. On with the list.......

National SW-3 using the 32 and 33 tubes....this rig is clean and works well. It does have a few items to note....a "bird brain" put a heaphone jack in the lower right corner of the rig (removed now). I carefully filled it and texture painted the patch job, which matches the original black texture paint very well....The repair job is virtually not visible as pictures show. One of the coil sockets was cracked...just a bit and was repaired. An original National coil set for 80 meters is included with the rig. Also, I believe I have 4 empty coil forms, maybe 6..... made by a fellow in IN...that will go with the set for your winding pleasure. These are very nice quality coil forms. This is really a neat radio. The best regen out there....(my opinion) Unfortunately the doghouse power supply does not come with the set. I used it with a little hombrew power supply that I wish to keep. Selling Price for the above $350 Prefer pickup, but will ship. OFFERS??

Military Spy Radio...GRC-109.....I have the 3 pieces, Transmitter T-784, Reciever R-1004 and Power Supply PS-2685. This rig works quite well. The reciever was aligned and is quite accurate. A manual comes with the unit. Selling price $280 Set is heavy, but shippable.

AEA CP1....RTTY demodulator terminal unit. Not sure if it works, it was used with a C-64 on RTTY. It is clean and unfortunately I dont have the manual for it. Price: $25

Drake C-Line... R4-C, T4XC, MS-4 and AC-4 all interconnecting cables and manuals. no mic....160-10mtrs... Sherwood mods are in the R4-C, all xtal filters too. This is a great station, used it to work through RS-12 all the time....nice for split band operation...but I cant keep all these rigs.....hi Price: $545 I will throw in a new set of finals too. Prefer pickup, but will ship...heavy

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition...it does not appear to have been in a smoking enviroment....I dont smoke...so none of these rigs have been exposed while they have been staying here in the shack :-) This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $175

Morrow Twins with Homebrew Supply......The MB-560A and the MBR-5. The two rigs are joined together (by their feet), but can easily be separated. They work well and the supply easily powers them...70lbs. A manual copy comes with the setup. I prefer pick up on this item, unless the Power supply is not wanted. Power supply is not shippable. Price either way is $325

Heath HG-10 VFO....Good condition, but could use a bit of tlc. I have never used this. It was purchased as a spare that was never needed....Price: $50

Harvey Wells "Z Match" ....this has a stock wattmeter/swr meter in it....nice condition. No manual. A rare unit. All original. Price: $165 (Holding)

Yaesu FRG-7 Shortwave Reciever....This unit has many of the "Gilfer" mods. Works ok but, could use a fresh alignment. (Can be tricky to lock the mhz, but it does lock.) Rig is clean and has great audio and accuracy. Manual comes with unit. "D" internal battery tray is NOT in the radio. Price: $175

Hallicrafters S-38.....Rough condition, rusty on the inside, but with "tlc" could be brought back, not working, but original right down to all of the capacitors from what I can see. Missing bottom cover, was cardboard I believe? Price $35

Heath HD-1418 Audio Filter, brown series....works ok , but speaker output low. Good condition. Comes with original manual. Price: $40

Drake Theta RTTY Terminal unit, Mint condx stand alone unit with a B/W monitor. Original manual. $215

Universal M-900 Shortwave Decoder with B/W monitor. All in excellent condition. With manual. This is a stand alone unit....no other computer needed $300

Heath SW-717 Shortwave Receiver.....excellent condition $135

Heath HR-1680 with the HS-1661 Speaker.....very good condition, Receiver works well and looks good too! Will not separate the pair. Manual included $215

Kenwood AT-200 Antenna Tuner good condition, manual included $150

Lampkin Freq Meter good condition, no book $35

5974. Icom UT-30 Tone Board

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-27 00:00:00 UTC
From: Dick Hughes <ragoldhughes@worldwingnet.att.net>
Message-ID: <3mn0jssnmon648pkjm8vv5afre7vdq1350@4ax.com>
Source record: 78794

I have a UT-30 tone board in my Icom IC-736. It is used in other transceivers also. The first time I had occasion to use it, I find that the tone frequency is hard-wired on the board! I can't believe Icom would think we would need only one tone frequency. Has anyone tried using a dip switch with the UT-30 and the IC-736? If so, did you run the wires outside the radio?

Dick Hughes

Not sure about the remote plug. Normally on those the bias should be set
at about 60 mils. If it has an sg switch in the back, make sure it is
on. The rf volts doesn't really mean anything except as a relative power
output indicator. The level is adjustable. This is used mainly as a
tuning aid if you had no metering etc. On my 830, there is no plug or
jumper in the remote plug, but an 830 could be different than a 820.
Sounds like a power supply quirk or something awitched off, etc. When
all is working, you should see the 60 mils when keying up with the meter
in IP. If you have that, the hi volt section should be ok. Also should
see 700-900?? volts on the HV meter setting. If no 60 mils idle current,
check the "SG" switch and make sure the heaters are on. Once you get to
the point you show idle current, I bet the rig will work. If you do show
the 60 mils idle, then try to tune up with the mode in tune, and the
meter in ALC. You should be able to peak the drive level/ALC reading
with the drive control. If not, you have an rf signal problem most
likely. Dirty bandswitches, etc, can cause this. If you see an
indication of drive, then try to load it on up with the meter in IP, and
using a cw carrier. One thing about any kenwood hybrid rig, you ALWAYS
want to do a final tune with full cw power. Never do the final tuneup in
"tune" mode. You will end up underloaded, and will have the possibilty
of a trashy signal, and splatter etc. Wish I had more info on the 820,
but have never had one. My experience with the 520,830. But about the
same as far as final section. Maybe I could think of more, if you have
more info after checking it out. MK

About anything will work that is momentary. I've used a dictafone pedal, etc. Lately I use a switch that was once an interlock switch for a furnace. I converted my dictafone pedal into my brake pedal for my nascar racing. "My gas pedal a sewing machine pedal"..g Drives like a real car nearly. MK

Date: 2000-05-28 00:00:00 UTC
From: Tony Sokol <tsokol@megsinet.net>
Message-ID: <393155B0.279142D2@megsinet.net>
Source record: 78548

Hi Brian,
Looking in my manual, I find that the bias should be set for 60 ma
of plate idling current. "Flip the stand-by switch to SEND and check
that the plate current (IP) is 60 ma". The only jumper I can find is on
the EXT VFO socket. Pins 8 & 9 need to be jumpered. I don't think you
could receive if they were not jumpered. The Remote has no jumpers that
I can see. Pins 1&4 are ground, pin 2 is NC, 3 is the relay contact
normally closed, Pin 5 is normally open, pin 6 is ALC (threshold level
approx. -6v) and 8 is External Speaker. 7 is used as a terminal inside.
Make sure the transverter switch on the back panel is in the right
position. (Toward the center I think). Also, make sure the SG (screen
grid) switch is in the on (up) position.

Good Luck

Tony - W9JXN

Hi, I haven't run HF mobile for a few months, and in the time I've been off the air I had the 60,000 mile maintenance check on my car. Before the car went in, I had 1-3 s units of noise coming from the car. Now the noise is 20 over, and the noise blanker on my IC-706 isn't doing the job. I looked at the the receipt from the dealer, and they did change the spark plugs. Looks like everything else they did was changing gaskets, fluids, and belts. I suspect its the spark plugs. Any other suggestions as to what may be the causing the increased noise? It seems to get much worse when you acclerate and then switch quickly to the brake (like when trying to find a parking spot at the mall). If it is the spark plugs, how do I solve the problem? Rig is an IC-706, High Sierra HS-1500, RG-8x.
Thanks,
Mike

They probably did not put resistor plugs back during your "update". Non resistor plugs are very noisy.

Check to see if the plugs that were replaced are resistor plugs (what you likely had in the engine before the check). If not--take it back to them because likely resistor plugs are specified for your engine. The dealers charge an arm and a leg or two for spark plugs. You should have changed them out yourself with some good resistor plugs. If the dealer put in resistor plugs, you may now be in need of new spark plug wires, because the may now be leaking. It may not be a plug related problem at all. See if noise is there with the antenna disconnected. If it is, it is line noise and you can filter it out. If noise is gone when antenna disconnected, you need to "sniff" to locate the source and eliminate it there.

They most likly took out the resister type spark plugs
and replaced them with "high performance" no resister
spark plugs. Many cars have resistor spark plugs
as OEM. Check your manual or look it up in the
book at K-Mart or many local stores. If that is what
they did, take the car back and insist that they install
the correct plugs.

If all else fails, you can install the resister type
spark plug wires.

Source record: 78564
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amaueur

I just recently got my ticket for general and I'm trying to decide what
equipment to get. My interest include CW for communication and I would
like to work satellites and Packet/data. I'm thinking of the Elecraft
K2 for my HF rig but I'm not sure what to get for VHF/UHF.
I love to design/build/work with electronics so if there are good kits
available that would be great.

Any recommendations and experiences would be appreciated.

Stephen

This is a new, unopened Icom PCR100 communications receiver for computer interface. It is continuous coverage from 0.1 to 1300 MHz (except cellular), and is a plug'n play installation on any Windows 95 or better computer.

It features unlimited memory channels (stores them on the HDD), multile scanning functions, a digital S-meter and much more. This is NEW, never used and is a $200 value - check the dealers for pricing.

Asking $125.00 including UPS Ground Insured shipping to domestic US locations.

Al - K8EUR

> P.S. Standard Disclaimer: I work for them, but I don't speak for them.

The older VTVM's used a divider network that totaled 10 Meg ohms, and so do the DVM's that I've worked on. The range was selected by picking a tap, not switching out resistors, so the load to the ground lead was a constant 10 Meg ohms. Also, if you have a meter with a 20 Meg ohm input impedance, parallel another 20 Meg ohms and you won't need to scale your readings. Above all, make sure the ground lead is in good condition, and never use a weak alligator clip. If the ground comes off, you can really get hurt, or killed.

It might be necessary to modify that to read "buy an old Diesel". I'd be awfully surprised if modern ones didn't have electric fuel pumps, injectors, and other peripheral devices. Even yours has headlights and gauges and starts with a battery, so there's a charging system and regulator. A Diesel doesn't have an ignition system, and that's often the dominant noise source, but it has every other noise-generating device you'll find on any other car.

We rent diesels where available for noise and interference locating, and some of them are electrically very noisy. Try before you buy. Some turn signals and heater/AC blowers are insufferable! IMHO, the '70 and '80 vintage Mercs had both. Toyota makes a diesel available only in Japan which is very quiet.

Hi,
I have a UHF Spectra A7 450-482MHz dash mount mobile for sale. 45 watts. It has 128 channels and a 8 character alphanumeric dislay. The front face has no scratches and no wear on the buttons. This has the 12 button keypad on the right. It has the mike, power cord and mounting bracket. I can program for you. It also
has the RSSI option in it which is a relative signal strength reading on the alphanumeric display. Will include Spectra base station tray with speaker built in. $450 shipping included. Thanks, Bob

6021. What about IC T81 E?

Message-ID: <8gqpo3ijp1@yggdrasil.utfors.se>
Source record: 78661

Hey folks!

I am considering buying the IC T81 E handheld.

What is this apparatus like? Is it any good?
Is there any competitor which is better?
How mauch is it in the US?
Any tests to find on the internet?

I am looking for a handheld with several bands that also could do as a scanner. It would be nice also to be able to attach some kind of external antenna, therefore my new handheld ought to be resonably good at coping with strong signals.

Thankful for any hint!

Regards

Rollie

6024. icom 746 filters

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-28 00:00:00 UTC
From: john@neknetwork.com
Message-ID: <39311992.E0037702@neknetwork.com>
Source record: 78664

Hi,

I'm going to order a new Icom 746. I'm trying to figure out what filters to order with it. I'm a 99.9% CW op. I use SSB once in a very great while.

The filter options for the 746 have me confused. Apparently you can add two filters in the 9 Mhz IF and one filter to the 455 Khz IF. What's confusing is there are 500 hz and 250 hz filters available for each IF. Adding fuel to the confusion is the filters for the 455 Khz IF are much more expensive.

Can someone explain what the differences are, and what mix of filters as a CW op I would find useful? My inclination is to go with a 500 hz and 250 hz filter for the first (9 Mhz) IF and leave the second one empty.

Tnx es 73,

John, KB1ENS

Hi and thanks for reading this.
I have written a Spectrum Analyser program (free) for the Yaesu FT920, Icom PCR1000, and Kenwood. It will run on any PC with Win95 or above. Of the Kenwoods' it's only known to work with TS 570, TS850 and TS870 so far.
Download via new homepage at http://www.mm5agm.pwp.blueyonder.co.uk
If you have a Kenwood and try the program, could you let me know the model number of the Kenwood and the result?

I'm exactly the opposite- mostly SSB but I think my experiences will be helpful.
I'm planning to use RTTY but haven't gotten active on that band yet.

Can someone explain what the differences are, and what mix of filters as
> a CW op I would find useful? My inclination is to go with a 500 hz and
> 250 hz filter for the first (9 Mhz) IF and leave the second one empty.

The most effective filters are in the 455 kHz IF. I have put a 500 Hz CW
filter there. It is able to split signals quite well- as I expected it to
do and what a 500 Hz filter has done with previous rigs (TS-120, IC-701).

I put a 1.9 kHz filter in the 9 mHz slot and left the others empty. This
works well with SSB. In your case, a 250hz filter could go there.

In short, IMHO, the filter you will need most of the time should go into
the 455 kHz slot. The second one should go in the 9 mHz slot.

Jeff

There's one up on Ebay now, but I don't know how long it will be there.
The FCC has banned the sale of amateur transceivers that can easily be modified
to work on 11 meters. Ebay has been cancelling those auctions. You can find a
list at:
http://pages.ebay.com/help/community/png-cb.html

Most of the radios listed are CB sets that can be modified to work on 10
meters, but there are a few that are the other way around.

My company just released the SPM-900 series of commercial-quality speaker-mikes (the SPM-902 fits your Yaesu HT).

Solid, rugged, textured black case...weather-resistance is obvious...a good-feeling handful of a unit!

I let a few loose in Dayton last week - and ALL users/listeners came back with positive audio reports - both receive and transmit.

Email me at ke6lcs@adi-radio.com for more details!

Hello again,

To everyone who responded - thank you. I think what I may do is pick up a Cushcraft Multidirectional Yagi. There is one that is a 6m/2m/70 cm tribander. It sounds like it isn't cheap ($285.00 CDN) from a compant called "NTF", in Calgary, Alberta. For the HF bands, I will try to build some verical dipoles, and do lots of listening, as I work on my HF qual. Apparantly, that particular Yagi is light enough to be able to use a simple Radio Shack rotator. If any Canucks out there know of any cheaper Canadian dealers, I'd sure appreciate to hera from them. With the GST, duty, and exchange, it becomes too costly to import from the U.S. Once again, thanks to all!

Hi All,
I have a nice Yaesu FT-900AT for sale.
This radio has been used very little and looks and works 100%! This has the
built in tuner and is very fast!
Also included is the remote mounting kit if you want to remote mount the
head of radio in vehicle(I never used it mobile)
$750 and will split shipping.
Thanks
Gary N7GB

6047. Re: icom 746 filters

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-28 00:00:00 UTC
From: Marv Luse <mwluse@dimensional.com>
Message-ID: <39313B1B.F7CB481B@dimensional.com>
Source record: 78687

John,

A possibly more important concern than *where* the filters are installed is *whose* filters to use. I installed an Icom SSB and an Icom CW filter in my 746. The SSB filter is useless, the CW filter works OK, not great. Be sure to use InRad filters, which have an excellent reputation.

As for which I.F. is more important, there is one school of thought that says filters should be as close to the front end as possible; others say the backend is where the filter should go. If you have the bucks, experiment and see what works best for you.

6051. KENWOOD TS 820S Question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-28 00:00:00 UTC
From: n3xbu@aol.comnospam
Message-ID: <20000528114759.24411.00000430@ng-fp1.aol.com>
Source record: 78691

My buddy asked me to look at an 820 he picked up somewhere. He has no manual, of course... It has no transmit but receives fine. I have tightened all the boards, seated all the interconnects and visual inspection shows finals and driver lighting up fine. Relay looks good. I seem to remember the remote plug should be jumpered between a couple of the pins?? Does anyone know or remember which pins should be jumpered and what the Bias setting and RF volts should read? Any suggestions that might be helpful are welcomed.

Thanks, Brian

6056. Re: Info on Gap Challenger Antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-29 00:00:00 UTC
From: William Cole <jumpstart@csi.com>
Message-ID: <f3b6js853aqmi5vlg9urk8p6v6ajk4cmpv@4ax.com>
Source record: 78496

Ed;

I have owned a GAP Challenger for about a year now. Assembly was a breeze (recommend a good tilt-mount), and tech support was extremely good (questions on lightening protection). Important that you set it up as far away from any metal structure (>25 feet) as possible. Otherwise the antenna is de-tuned in certain bands.

Its performance across all 8 bands is reasonalbly good. Though it cannot provide the weak signal performance that my 160' Dipole does, it still does a respectable job - especially on 20 meters and above. The biggest thing you'll notice is that there is more noise reception with the GAP than with a Dipole. This is due to the fact that most noise is vertically polarized...

My personal experience with the GAP above 30Mhz is limited since I run a separate antenna for VHF and above (a Discone). My impression is that the 2m performance is average, but again that is an ad-hoc opinion not backed with alot of testing.

Good Luck!

From: turner@rome.ics.uci.edu
Message-ID: <8gtpks$k67@rome.ics.uci.edu>
Source record: 78498

Hi John -

I have a couple of radios that allow filters in separate IF's. Putting two filters together, one in each IF ("cascading") has the advantage of sharpening the skirts and increasing out of band attenuation. In a heavy QRM situation, I find the second CW filter really helps.

The 455 KHz filters are more expensive, that has always been the case. They are more expensive to make. They turn out to have slightly better specs in the main, but are usually further down the IF chain so I like to use them to cascade.

I personally recommend a pair of 500 Hz filters, one for each IF. Your Passband tuning or IF shift can help you shape that narrow passband when you need to. Another 250 filter in the 9 MHz I can be icing on the cake.

Hi all
I have a Yaesu FT-757 GX.It works fine on 10 meters with 130 watts out.Same out put on 12,and 15 meters,but only 100 watts on 17 meters.On 20 meters it is a little less,and on 40,and 80 meters I have to over drive the audio to get over 50 watts.I tuned the PA board at 14.000 mhz, as described in the service manual and now can get 90 to 100 watts out on 40and 80 if I over drive it,but at a reasonable audio level it only does about 50 or 60 watts.I also understand if VR-06 set over 100 watts the ALC meter will not work.I set it at 100 watts and tried a little less,and the ALC still does not work properly.The rig does a great job on 10 thruogh 17 meters,but not on 20 thruogh 80.I adjusted T-20,T-21,T-23,T-24,and T-25 as the service manual says.Still the power is higher on the higher frequency bands.It is especially strong on 15 meters.Has something else been tampered with that is not described in the service manual.I do not have the manual,but was given the information by a freind that has one.Thanks much for any help.

Go out into the dark tonight with no lights around. Start the car and open the hood. Look around all the spark plug wires, distributor cap and plug ends to see where the big spark gap transmitter is arcing to the block. Pay particular attention wherever metal comes near the plug wires.

They probably pulled one of the wires apart or cracked it against something and now you either have a series arcing in the plug wires or to ground....

Next time you buy a car....BUY A DIESEL! The only thing electronic in my 1973 Mercedes 220D is the clock...(c; There is no difference in noise between engine off and full throttle!

Most SSB work on 6 and 2 is done with horizontally polarized antennas.
The GAP is vertically polarized. Vertical polarization is fine for FM
on 6 and 2.

Hope this helps.

Sure, I used an IC-02at for packet for years. He will need a TNC (radio
Modem) and a PC with a serial port, and some kind of terminal program.
The TNC manual will discuss wiring, which is a little bit special due to
the lack of a separate keying line on the 02AT.

6072. Idea: Using an IC 202 2m SSB CW on HF

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-29 00:00:00 UTC
From: Juan <novalid@novalid.com>
Message-ID: <8gst6obni1@diana.bcn.ttd.net>
Source record: 78593

I am planning to build an "emergency" HF QRP rig. I have some home made. I am an old but perfect portable IC 202 SSB and CW 144 MHz transceiver. What do you think about using it with a "down transverter" for 14 MHz, for example?. The SSB rx quality of the 202 is quite good.

Greetings

Juan Miguel, EA6NP

6073. Re: Low power out put Help!

Newsgroup: rec.radio.amateur.equipment

I am considering a HF rig purchase and wanted to get some expert opinions. I am considering either the FT-1000D (used) or the FT-1000MP. I have an FT-990 and really like it, but feel I would gain some features with either above over the FT-990. How much better is the receivers in the two above v/s the 990? V/S each other? Is there anything that is significanlty better that makes one radio better than the other (1000D v/s 1000MP)?

Thanks for you help.

Hi John -- you have received some excellent advice from others -- to wit:
Richard Ferguson wrote:

> Sure, I used an IC-02at for packet for years. He will need a TNC (radio
> Modem) and a PC with a serial port, and some kind of terminal program.
> The TNC manual will discuss wiring, which is a little bit special due to

> Richard
> =============

In addition, keep the IC-02AT away from the computer -- noise from the computer can swamp out the IC-02AT receiver. Use a separate antenna -- far away from the computer as possible.

Well, most of the RV's are made from Fiberglass & Injection molded plastic...
Either way, your best bet is to check the diameter of the ladder that goes up
the back.
You might want to ask the rental people to see if they might have one that will
suit your needs....

I have a 1969 Winnebego that has aluminum everywhere... Great for RF work...

Right. When they pull the wires off to replace the plugs, they could have
damaged the connection and could be a source of rf hash.

> It may not be a plug related problem at all. See if
> noise is there with the antenna disconnected. If it is, it is line noise

Even then be careful with the newer ones. I have ABS brakes in a 93 Transam
with the Corvette engine. Every once in a while they will open the squelch
on VHF. Some times the noise will go away when I touch the pedal, and other
times it will start when I touch it. Sometimes it just stats while driving
down the road...Usually when going slow.

Just took a look at it...Looks like they washed it and then dried it in the oven. True, it's ugly, but I'm not sure that it's uglier than the TM V7 series. Close though. Thing is I don't want all that stuff in one box. Prior to these I though the apple computers were the ugliest things on the market. They too, work good, but man are they ugly.

Speaking of curves, there seems to be a tendency to revert to the 70s style when every thing had to be rounded and streamlined. Must be the kids of those engineers are just hitting the market. and are high enough up the food chain to have some say in design.

This has a Huge power supply with a variac to control the voltage and two meters. I think it's 4500V with huge oil caps and extremely heavy duty. The amp is separate and sits on the top. Works fine. I have the documentation. Weighs about 300lbs
$300 pickup only in FtLauderdale Florida 73 Chris

6100. What about IC T81A or IC T81E?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-29 00:00:00 UTC
From: Berglund <berglund.upp@privat.utfors.se>
Message-ID: <8gu5sl$2ha$1@yggdrasil.utfors.se>
Source record: 78721

Hey folks!

I am considering buying the IC T81 E (corresponding to IC 81A in the US) handheld.

What is this apparatus like? Is it any good?
Is there any competitor which is better?
How much is it in the US?
Any tests to find on the internet?

I am looking for a handheld with several bands that also could do as a scanner. It would be nice also to be able to attach some kind of external antenna, therefore my new handheld ought to be resonably good at coping with strong signals.

Thankful for any hint!

Regards

Rollie

Dear OM,
i have quite a big problem with our radio
club transceiver, a YAESU FT901DM.
When the old PA tubes blew, we changed them
and the driver tube also.
Now we have output (up to spec) on 10m,
but NO output anymore on ALL the other bands.
Is anyone here who has such a transceiver
and can tell us about ideas about this
problem? Do we have to retune for all bands?
ANY IDEAS?
Please feel free to mail to me direct also!

You might consider the Yaesu FT-847...and add the Collins filters or get
INRAD filters...it will make good HF operation great...out-of-the-box
VHF/UHF/Satellite operation is outstanding.

Sorry, guys, I guess you'll have to make that phone call. After being informed that it is copyrighted, by an outside vendor, and Kenwood pays for each copy they ship, I took it off my web page.

You can find a link to Kenwood's ftp site there which allows download of similar software for the TS-570. I once tried it here just to see if it worked any better than the '870 stuff (it doesn't). The only difference seemed to be that the default "front panel" looked like a 570 instead of an 870.

Source record: 78736
Cross-posted to: es.rec.radio.amateur,free.uk.amateur-radio,rec.radio.amateur.equipment,uk.radio.amateur

Hello Alex,
Why did the PA bottles 'blow' ?
Just changing tubes shouldn't stop the rig working. The tubes may have different inter electrode capacitance compared with the originals, but that would only slightly off tune the drive circuits, so there should still be some RF drive that might be reduced to some degree.
Its usually more difficult to get enough drive at 10m, if your getting output on that band then, it should be more probable to get drive on the lower frequency bands. That suggests that some other fault has occurred, so check for anything you might have disturbed, disconnected or broken.
If you have access to an oscilloscope or another RX you could check the RF drive from stage to stage and find out where it gets 'lost' (make a small coil 10mm dia with 5 or 6 turns of PVC hook-up wire connected to a length of co-ax connected to the RX for 'sniffing' around the driver tuned circuits.
(BEWARE) Keep your fingers away from the PA High-tension voltage, the HT is often left live even when transceivers are in RX-mode. PA HT is usually contained in the PA screened compartment, but BEWARE. Always have a second person present when working on equipment operating at 240V and above, who can render first aid in emergencies.
Good luck, Denzil G3KXF.

Hi I recently came across a MX-5 mobile mic, I believe the manufacturer is Adonis (it looks like a photo in the HRO catalog). Does anyone have the pinout for one of these? It looks like a nice unit.

Thanks for your time, Art KF7GD

6117. ICOM 746 filters - thanks!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-29 00:00:00 UTC
From: john@neknetwork.com
Message-ID: <3932E157.7648D7CA@neknetwork.com>
Source record: 78738

Folks,

Thanks for all the replies both privately and in the NG for info about the IC-746 and its filters. I'm probably going to go with a 500 Hz filter in both the first and second IF at this point.

I'm going to call and order the radio tomorrow. What's irking me is that I'm on the fence about getting a Yaesu FT-920 or FT-847 instead. I just keep reading the reviews of all three radios, and it's a tough decision. The FT-920 looks great, as does the FT-847 - but everything I've read in the NG's seem to indicate the IC-746 is a better radio, as do email conversations I've had with a number of people. Also, there appears to be quite a few "for-trade" postings asking to trade for a IC-746 from a FT-920 or FT-847 over the past few months but few (actually haven't seen any) going the other way. The Kenwood 570DG is looking attractive as well! It doesn't help that all of these radios are about the same price.

Decisions, decisions... 73,

John, KB1ENS

Anyone have any idea what an Elmac AF67 is worth? Worked when last tried (1962) so all tubes should be OK.

Also what about a James power supply (vibrator type) for the Elmac?

Cables and manuals for both will go with them.

I plan on selling to a good cause so don't need top dollar, just want to know what a fair price would be.

Thanks,

Kline W7CNN w7cnn@arrl.net

> consumers pay the bills.....
>

Of course they care. The consumer is billed for usage that occurs past all the losses. So any improvement in distribution efficiency means a reduction in necessary generation capacity and fuel.

Most utilities are acutely aware of the loss budgets in their distribution systems. An economic analysis is done on each loss factor to determine if the cost to reduce the loss is greater or less than the cost of generating additional power to make up for the loss. Economic analysis is a big part of electrical engineering.

Body handling: Binary attachment payload not displayed: dconti2.vcf

I realize the post may be off topic, and I am really not sure what radio group it is appropriate in, but I was hoping that someone familiar with the Motorola VISAR radios and their programming could answer a question for me...

In my VISAR radio, when I put the radio on scan, and it stops on an active channel, I hear an annoying pulsing in the background. I am assuming that this is some type of Priority Channel system where the radio is searching the priority channel for activity.

I would like to eliminate this function, but not sure how to do it. I assume that it is something to be done in the programming of the radio.

Any input is appreciated, thanks in asdvance.

Dan

Source record: 78504

Steve,

Funny you should mention it, my W2A died also, I'd be interested in knowing if you found a solution. BTW the reset requires 4 buttons to be pushed all at the same time. If you don't have the manual I will look them up for you. A reset didn't work for me.

My, W2A, problems is no LCD display and the TX led is goes on when I slide a good battery on. When I press the on button the led goes to yellow and still no LCD display. I don't think the TX is actually comming on.

Again I d be interested in what you find out.

Thanks,
Tom, K6KMT

From: k6kmt@aol.com
Message-ID: <20000530005133.26459.00000897@ng-fm1.aol.com>
Source record: 78505

Bruce,

I have the same radio (3230) and have been thru the same thing, unfortunatly I don't remember which pots are the dev posts but I can tell you, in my case it didn't make much differance when I turned them all the way up. There are no audio level adjustments in the mic. I called Icom and they gave me the pot numbers for u/vhf sides. They also told me that these radios are known to have low audio. The tech told me to replace the elect element with a Radio Shack element, cut the limiting zener in the mic and/or remove all the rubber/foam in the mic's audio mechanical channel. I did all of this with no help or noticable differance.

Good luck, perhaps yours will respond to adjustment.

Tom, K6KMT

You're right, Roy. It has a MECHANICAL voltage regulator that's
unaffected by the 650W coming out of the 15' monster Bugcatcher
homebrew antenna. All the DC electricals are also mechanically
operated, except for the analog quartz clock......

Most hams have ignition noise, ad nauseum. Actually I do to, from all
the cars that get near me. Luckily, they are only temporary.

Did you all know that ONE THIRD of the AC power generated in this
country is wasted by the electrical distribution system, according to
the DoE? THAT'S the biggest noise in my HF mobile installation. I
use a JPS NIR-10 audio signal processor to get rid of most of it.....

I did kind of the same thing last year but simply clamped the Hustler bumpermount system minus the straps to a 2" receiver type bicycle rack, up near the top of the rack. I ran a ground braid from the ball to the chasis. This will be especially important if your RV is fiberglass. You could also rig up some sort of frame mount and any holes you drill if you can't use existing bolts would likely go unnotices at return. Check out the High Sierra site for the RV screwdriver system too.

The annoying pulsing is probably from when the radio is looking back at the priority channel which may be the selected radio channel. Depending on what is your operational requirement you would probably want the selected radio channel your priority channel when the scan feature is activated so you don't miss any radio traffic. The RSS can rearrange your scan configuration.

Does anyone have any experience with the JPS NIR-12 and the Timewave DSP-599zx DSP audio processors on a direct "A/B" comparision basis? Just wondering if someone has owned both at the same time, and compared their performance.

My most significant interest is in the Noise Reduction mode, as well as their Bandpass performance for CW.

Thanks es 73,

Hello!

Does anyone have any recommendations for a good 6m/2m antenna? I've looked at the Cushcraft "Mutiband Directional Yagi" (6m/2m/70cm), although it's somewhat pricey, and I'd like to see if anyone recommends something else. Any tried and tested verticals? Thanks!

6154. Your input (re: radio selection) please...

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-30 00:00:00 UTC
From: DS <groundzero@earthlink.net>
Message-ID: <3933EA3E.6603B62B@earthlink.net>
Source record: 78525

I'm looking for some new radios.

I have a amateur license but have been out of the 'loop' for at least ten years. When I started looking at what's out there a few days ago I was overwhelmed. And as it seems I can usually get reliable, down-to-earth advice on almost any topic from newsgroup users I'll start my search in earnest here.

I'm looking for a pair of handheld radios that will be strictly used directly to each other- in other words NOT with a repeater. You could say I'm looking for the 'next step up' from FRS. They will be used on land and mostly over open desert (or other flat terrain) or low hills. A maximum desirable range would be 4-5 miles. Rechargeable batteries are not necessary- AA's are fine. Other features can be sorted out later but these are the basics.

Basically I just need a good, solid, reliable, BASIC two-way handheld radio.

Thanks to all,

DS

6156. Re: JPS NIR-12 vs. Timewave DSP-599zx

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-30 00:00:00 UTC
From: JerryL <jlockett@lightspeed.net>
Message-ID: <QBSY4.132594$MB.2552083@news6.giganews.com>
Source record: 78527

Once I got hold of a DSP-599zx and compared it to my Nir-12, I dumped the Nir-12 as fast as I could. There was a world of difference between the audio quality between the two...The DSP-599zx was so good, I used it instead of my internal TS-870 DSP filter. I couldn't stand the TS-870 noise reduction, while with the DSP-599 I couldn't tell it was on, audio quality wise, but it worked very nicely and kept most of the 'stuff' from ever reaching my ears. The only way I could tell it was working was to switch it off once in awhile, and hear the difference.. The Nir-12 sounded 'funny' like it didn't have enough bits resolution or something in the A-D conversion stages etc...Just my two cents worth...

regards, Jerry...

Hi,
I have a UHF Spectra A7 450-482MHz dash mount mobile for sale. 45 watts. It has 128 channels and a 8 character alphanumeric dislay. The front face has no scratches and no wear on the buttons. This has the 12 button keypad on the right. It has the mike, power cord and mounting bracket. I can program for you. It also
has the RSSI option in it which is a relative signal strength reading on the alphanumeric display. Bracket, power cable, mike. Will include Spectra base station tray with speaker built in. $450 shipping
included. Thanks, Bob

I have in good condition two 212Z-1 Remote Amplifiers. These are solid state, 4 Channel AC or Battery operated portables in cases for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a real great addition to any station. $425 each plus shipping.

Whoa! I don't know if I can believe that one. Where did you find the
DOE statement?

Even if it's true, most of that one third power loss would be as non-rf
noise producing heat in the resistance of power line and transformer
conductors and transformer core losses. Some (not much) might be
corona discharge and arcing across damaged insullators, but surely not
much.

I am expeierencing an HF SSB noise level of S7 to S9 on my Icom 706MKIIG when the engine is running. The vehicle is a 1998 Ford Crown Victoria with 40,000 miles. The noise is reduced to the normal S2 to S3 when the engine is off. The noise level remains normal when I turn the key to the accessory position. The radio is directly connected to the battery. I connected an external power source to the radio and still had the high noise level while the engine was running. The antenna system is the Comet QE model that has the replaceable stingers for the different bands. The antenna is mounted on a Diamond trunk lip mount. I have been told that Fords are notorious for this. I would appreciate information from anyone who has had experience with this problem that could help me resolve this.

Hi Ryan,

I agree with the poster (BobJ?....and sorry if I got it wrong!)
who cautions against beleiving all the hype about trouble-free
HF operations from an apartment or condo.
You should assume that unless you operate QRP, you will have
problems with your neighbors, unless you can do one of two
things:

1. Lie outright.
2. Operate when most of your neighbors are asleep (what I do).

When you live in a place that is connected electrically and
inductively to all of your neighbors (via electric lines,
conductive structural frameworks, etcetera), you should consider
that there is enough direct and reactive connection between you
and your neighbors to drive both YOU and THEM crazy.

Enjoy the challenge of QRP. Not many operators know how to enjoy ham radio using only minimal power, but you can be one of the few. In the same way that morse code hams enjoy an advantage over non-code hams, you can enjoy an advantage over hams who are powerless when it comes to operating in very low-power ranges. And as you practice at it, you _will_ make DX contacts, and will also have the satisfaction and pride of operating a very low-power station that can communicate around the world nonetheless.

As a result, you will be a better operator than those who rely on raw power to get their signal accross (ANYBODY can do THAT!!)

Buy a rig that gives you the option of 100 Watts, but learn to work the world on less than 5 Watts. In the long run, you will be much happier, and you will have an edge over those who haven't shared your 'apparent' limitations.

Hope this helps,

John

To anyone attending SeaPac this weekend that might have Ham / Computer / Electronic gear or supplies they no longer need, or would like to donate to a 501c3 Non-Profit Ham Group (Cascade Amateur Radio Society), bring the items along with you. I (Louis Bybee) will have two tables Saturday only, where we are selling donated items to raise funds for the Society's efforts to serve the area's emergency communications needs.

Ask at the registration area for directions to our tables.

We are seeking 486 and newer desktop equipment, Laptops of any type, any Ham or other radio gear, and most Electronic things.

If you have items that you would like to donate but can't make it to SeaPac, EMAIL and we can make arrangements for future Ham Fests.

Thank you in advance, and enjoy the gathering!

I can't properly tune my FT-102 because of an intermittent drive problem. When switched to "tune" and the "mox" button is depressed--the configuration for tuning-- drive is intermittent. CW mode does not work as well. However, output is consistently available in SSB mode. I know this because I'm able to crudely tune by switching to transmit and whistling in the mike to dip the plate, etc.

An RF output jack on the back panel provides low level rf. Fed to a scope, signal presence corresponds to the presence of drive or lack thereof. This suggests that the problem lies somewhere before the 12BY7 driver tube.

I thought a bad crystal was the culprit, but a replacement yielded no change. The intermittency almost looks like a bad connection--a relay perhaps? I'm stumped.

6180. NEED HELP identifying 4 Collins Mechanical Filters

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-31 00:00:00 UTC
From: Donald & Christine Anderson <pita@outrageous.net>
Message-ID: <sjbmt0f25pj179@corp.supernews.com>
Source record: 78401

I have located 4 Collins Mechanical filters but I am not sure what they are
out of. The info is as follows for one of them:
TYPE F455 N 40
SER 8V2
P/N 5269160009
5 915 686 6441.
About 2/3ds of the way down there is an oval metal flange with a hole
drilled for chassis mounting. I have one for 20, 40 and 80. I am not sureon
the 4th one as some info is missing.
Does anyone know what radio these were used in and can they be used in say a
75A4 receiver?
Thanks for any help
also...What transmitter matched the 75A4 which I was lucky enough to find.
Thanks again and best 73
please post direct to my address and not the group.

This is the FT 100 not the 1000 MP, it seems like all they really did is to add a larger speaker and some of the options from the FT 100. It's interesting that they installed the crystal oven makes me think the FT 100 drifts off frequency --- anyone notice this?

Interesting observation I've never heard of DSP refereed to as "someone's idea of electronic humor" but after 2 seconds of thought I must agree.

I'm using a 990 with the SP-6 and DSP 59Y unit. I purchased this rig because my 890 quit working properly.
I've sent my 890 in for repair now but have gotten fond of the 990 in a very short while. The 890 will become a backup rig. I put all the appropriate filters in the 990 just like I did the 890 and that definitely makes the biggest difference. Compared to the "humor unit" against the filters and I believe you get better results with the filters. I will say two things for the DSP unit, 1st. it dose get rid of the CW signal when someone is tuning up and you are trying to listen to SSB. 2: I have become interested in SSTV lately and when I 'turn on' the built in SSTV filter in the DSP unit it really makes a difference, 80-90% of the white noise just goes away. It also has a filter for RTTY but I have not tried it yet.

I have used all the rigs mentioned (some only for 2-3 days at a time field day etc....)
For me I would put them in this order:
1. FT 1000D (especially if your are into DX)
2. FT 990 (add all filters)
3. FT 890 (add all filters)
4. FT 1000MP
In case someone wants to know; I put the 890 and 1000MP side by side with an antenna switch and both set to the same signal (S4-5) and I could not tell the difference. If you can't tell the difference then all the specs in the world don't matter.

Wouldn't surprise me in the least! Look at all the potential losses thru vast cross-country transmission lines, substations, and the full array of distribution systems, plus losses thru dirty insulators, radiation to earth, and LOTS of shorts to vegetation...

Ok, so I read it wrong. It's ONLY 260.1 BILLION Kwh lost in 2000 of 3.6 Trillion Kwh generated. Still, if one multiplies 260, 100, 000, 000 by my electric rate of 8c/kwh, it's a tidy little sum we ALL pay for continuously in that rate......

http://www.eia.doe.gov/emeu/steo/pub/10tab.html

I searched DOE for this and found way too many pages of bureaucratic text than I could digest. Every time I go to a different place, I get wildly varying statistics, of course, depending on whether you want to make Big Power look real good or want it real bad......

I don't think they really know, or actually care, because the consumers pay the bills.....

Warren, what I'd do is get yourself a 'used' automotive battery and connect it in parallel with your 3 amp supply. When you're not using the radio, the 3 amp supply will charge the battery. When you're receiving, the 3 amp supply is more than sufficient to power the HTX-10, and when you're transmitting, the additional amperage will be supplied by the battery. Don't try to reduce power out of the HTX-10, that's not the answer. Get yourself a used battery somewhere. Even a motorcycle battery would be OK.

Just think of how much we could save if they'd get rid of those high power
mercury vapor yard lights and replace them with lower power, shielded
lights.
better yet, put them on motion sensors.

A neat noise stopper I discovered about 15 years ago on the County Hunters did wonders for a problem with a Dodge Van. Determine the length of the power cable to your rig and add one foot. Cut a length of large coax RG-8, etc. to that length and strip the outer insulation from the coax. Remove the shield from the coax (push the shield together so that it is now larger diameter and of course shorter than the remains of the coax. Push your power cord through the shield and connect your power cord back up to the battery. The shield should now cover the power cord completely from battery to the back of the rig. NOW, ground either end of the shield to a good ground point under the hood or at the rigs ground point.

I preferred to ground at the battery's negative ground point which has always been to some point near the battery - post and the junction box (for lack of the correct term of that little power strip) under the hood and very near the battery. I have used this system since 1985 and is a standard install for me now, I don't even bother to check to see if I have engine noise before the install. It stopped the noisiest vehicle I've ever owned (the Dodge) and I have never had the rig to cause any problems with any of my vehicles during a transmission either. This is an easy and simple fix.

For any clarification of the above please reply to my email address.

OK. I thought the FT 100 might have been a typo. I did look at the new (to me) Yaesu FT-1000MP Mark V in a Texas Towers Ad. It do look like it sounds good!

I have absolutely no relationship with GAP Antennas what-so-ever, EXCEPT, for the fact that I am one totally happy customer and pleased beyond all my expectations with my GAP Titan. If I had it to do over, the only change I would make would be that I would have saved my money up a little bit longer to buy the Voyager so that I could do 160 mtrs.

Mike, You must have made an error somewhere in the construction of you're Titan. I work DX every day with mine and I do not run power. I join in QSO's every day usually on 40 and 20 with some work on 15. I have run comparison tests against my Titan and my Dipole on every band (75-10) switching back and forth between the two and NO difference could be heard except for 75. I was 10 db down from dipole.

The Gap Titan does have a capacitor in the top leg of inner coax. And yes the GAP is a dipole antenna too! It just points up and down instead of sideways, giving it a low take-off angle.

Give you're GAP a really good re-check on assembly and connections Mike. You are missing out on a very, very nice antenna.

By the way, the only complaint I have on the Titan is that the manufacturer sells it to you (AES) and does not include both capacitors with the sale, and you cannot tell where the under 2:1, 100 kHz width is going to be. Mine has a center frequency of 3.940 for the under 2:1 space and it covers a larger bandwidth than the advertised 100 kHz. I go down to 4.25 and up to 3.88, AND I have discovered through this group that it does indeed cover 2 meters. I have heard some say it will cover 6 meters too, but I can't check it out.

73, best of luck to you,
Butch Magee KF5DE

Its not a problem of your radio, I have heard this many times parked on the ramp of our local hospital while sitting in my ambulance, it would come across on several different freq's, and it was a paging system. Not sure why or how it happens but it does. I have never been able to find anyone at the hospital to tell me what type of paging system they have either. Must be a top seceret thing <G>..

Greetings,

I have for sale a Yaesu 736 all-mode uhf/vhf/satellite receiver.

I have used it for satellite work including AO-16, LU-19, WO-18, UO-22, KO-23, KO-25, AO-21, UO-14, FO-20, FO-29, RS 10/11, RS 12/13, mir & SAREX.

It includes 2 meter, 440Mhz, mic, manual, power cord, & original box. It has a 9600 baud data port already installed as well as a 1200 baud data port.

It is in great shape with one scratch on the bottom. The unit was checked out by Amateur Electronic Supply last summer and given a good bill of health.

Asking $775 plus shipping & insurance if buyer desires. Will ship to contiguous 48 US states.

contact me at gsimms@fgi.net if interested.

I have the following manuals forsale. all prices include postage to any
address in the u.s.

1) Original Johnson Viking Valiant operating manual. $40

2) Original Hammarlund HQ-145 tech description and operating manual. $30

3) Original Drake TR-3 instruction manual. $20

4) xerox copy of TR-3 manual. $7

5) xerox copy of Drake R4C (rev. 2) very nice and bounded. $12

6) xerox copy of Drake T4XC very nice and bounded. $12

will sell R4C and T4XC manuals as pair for $20.

7) Original Collins 32S-1 instruction book as new (from surplus sales) $22

8) xerox copy of 32S-1 manual. $7

9)3 xerox copies of the Johnson Ranger 1 (dated 1-55) bounded $12 each

10) xerox copy of National HRO-7 manual. $7

11) original Kenwood TS-930S service manual. $25

12) xerox copy of Johnson Pacemaker operating manual. $10

Some flea vendors really need to get a grip on reality; a few years ago, one fellow was asking $100 for an old AF signal generator that would not fetch half that at a "normal" sale, and to make matters worse, this unit had been drenched in the Friday morning downpour, as well as submerged in a river that flowed across it from the higher points of the flea market area. This fellow obviously didn't have a very good grasp of reality in this instance, and did not sell his sig gen, as I found it lying next to a trash can on Sunday (and I did not take it home, I've got too much stuff already).

As far as the commercial 2-way dealers, they are specifically in this thing to make money. They are going to charge the highest price they think they can get away with, and the sad part is that sooner or later they will succeed in selling that beat-up piece of junk to some poor sap who doesn't know any better.

The average ham who gets a space, however, is trying to get rid of stuff he no longer needs or wants. While the price he is asking might be a little high, haggle with the guy. He's trying to clean out his shack, and certainly doesn't want to haul the thing home, so you may be surprised at your success.

On the other hand, you have to go into the flea market (especially Dayton) with realistic expectations. After many years of attending Dayton, I always go into the flea expecting to see beat up junk being sold for outrageous prices. That way, I'm pleased and surprised when I find something nice for a good price. A couple of examples from the 2000 Hamvention:

1. The new $10 DMMs complete with rubber shock holster. If it only lasts a year or so before conking out, it still only cost me $10....

2. The two nice, clean Kenwood TS-700A 2m all-mode transceivers which I got for $175. The seller was quite honest that they had problems, even elaborated on said problems, and threw in the service notes from the Kenwood FTP site. One needed a new 9v regulator, and the other had no TX.

I found later that the one with no TX had a loose VOX plug, thus keeping the internal jumper from making contact. Cleaned it and tightened it, and it now works 100%. I've also replaced the 9v regulator in the other unit, and it too now works 100%.

So there *are* great deals in the flea market at Dayton; you just have to go into the thing with realistic expectations, a good idea of what you are looking for, and some research under your belt into what the item you're looking for is currently fetching on the used market. You also have to look carefully; don't rush through the thing! Finally, don't be

afraid to haggle; most vendors will gladly haggle over the price,
so you will very likely be able to knock some bucks off the price.

6219. Kenwood R-5000; VFO Knob Very Tight

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-31 00:00:00 UTC
From: radio542@aol.com
Message-ID: <20000531155439.15893.00002333@ng-md1.aol.com>
Source record: 78487

For the past week, the VFO (tuning) knob on my R-5000 has started to become very tight to the point of almost siezing up.

The receiver is eight years old according to notes that the original owner made in the manual. Physically, the radio is in *as new* condition with no signs of wear. This is the only funtional problem I've noticed.

Of course, I figured the culprit was the drag mechanism in the knob iteslf. Using a small allen wrench I removed the knob, expecting to find the cause, but closer inspection found that the shaft itself was not turning freely.

So then I carefully removed the top and bottom chassis covers, along with the front facia. I was hoping to find some debris or other physical indication of what is wrong. Then I separated the plastic housings containg the front programming buttons and the meter from the vertical chassis. Then the vertical chassis was separated from the main chassis.

Well, this is about as far as I can go without removing two PC boards from the back of the vertical chassis to get to the stuck potentiometer.

My questions are:

1: So far I have not disconnected anything electically, with the exception of the speaker in the top cover. Would any further disassembly, such as the two PC boards noted above, necessitate realignment?

2: I would assume that the potentiometer itself is manufactured in such a way that any malfuntion such as this would simply require a remove and replace. Again would this require realignment?

3: Where can I find such a part?

4: And probably most important, should I just put it all back together right now and ship it off to a service facility? Who would you reccommend since the unit is long since out of warranty?

Please post or reply directly. I will post a follow up as this progresses.

Thanks!

I don't think it is a potentiometer, it is a contactless optical coupler. The only moving parts are the bearings or bushings. Try to work some sewing machine oil (sparingly) into the front bearing. I don't remember how to get to the rear one or even if there is a rear one. The same tuning mechanism was used on several radios and transceivers, so spares may still be available from Kenwood.

You probably received many replies already, but just in case...

AFAIK, the elusive 2710H was discontinued late last year when the 2800H came out. Pitty...I've always liked the display format of Icom's dual-band mobile line. I was planning on getting a 2710H to supplement the 2410A I have. The 2800H is just too "gaudy"...if I want a 5" monitor, I'll buy a 5" LCD screen.

The 2710H is also quite rare on the used market. Everyone who has one doesn't want to part with it. Actually, I don't see many used Icom dual-band radios for sale...either they work real well, or they died and were thrown out. My 2410's been around for 4 years...no problems except for new bulbs.

Good luck in your search. Let me know if you find any.

6223. FS: JPS NIR-10 DSPw/ upgrade installed

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-31 00:00:00 UTC
From: NMorse <n1frh@gis.net>
Message-ID: <sjavk8mb5pj26@corp.supernews.com>
Source record: 78491

I have 1 JPS NIR-10 DSP for sale. This has the $25 upgrade installed. It works and looks great.
Comes with the original manual.
$100.00 shipped within the continental US, otherwise, buyer pays the shipping.

Thanks,

Nahum Morse

6224. WTB Ten Tec Delta 580 or Argosy II

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-31 00:00:00 UTC
From: radions@juno.com
Message-ID: <39358ea5.676064@news.neteze.com>
Source record: 78492

I am looking for a Ten Tec Delta 580 that has the noise blanker,
remote VFO and other options

Possibly if someone has an Argosy II with 12 & 17 Meters (they
weren't) made that way. I would be interested in that also.

Thanks,

Tracy "TR" Reese
WB6TMY@arrl.net

6225. KENWOOD TS-450S/AT

Hello to the group,

I'm picking up my TS-450 tomorrow. If any other hams who have
experience with this rig would like to share their experience,
I'd love to hear from you! Especially any weak points with the
rig and modifications that might be possible.

John

6226. Help on HTX-242

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-31 00:00:00 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <3935AA12.BDF31B42@erols.com>
Source record: 78494

An amateur that belongs to the same club I do, has an HTX-242 by Radio Shack. While his deviation is sufficient, the audio tends to be bassy. Is there a mike out there that is compatible (direct plug-in) that would provide nice clean, crisp audio for the unit? If not, are there any audio modifications that would do the same thing using the mike provided with the unit? Thanks. 73 Murray, K3BEQ

6227. vx-5r delete memory

Newsgroup: rec.radio.amateur.equipment
Date: 2000-05-31 00:00:00 UTC
From: markus <eowen@my-deja.com>
Message-ID: <8h486kvju1@nnrp1.deja.com>

while waiting for my license to get on air (seems to take a
long time nowadays...) I'm playing around with my new vx-5r...
Does anybody know an 'easteregg' to delete programmed
memory channels (ie. to get the '*' again) ?

tnx+73,
markus
